Army Sustainment Command Enterprise Board (E-Board)

Internal agency concurrences will

be provided

No

Background Information

AR 700-8, Logistics Planning Factors and Data Management. This regulation provides policy and assigns responsibilities for managing, collecting, developing, maintaining, validating, and disseminating Army logistics data and planning factors for use in Total Army Analysis (TAA); Operational Logistics Planner (OPLOG Planner); logistic factors file; and other Army, Joint, and DOD logistics processes and planning tools.

Description: The Army Sustainment Command (ASC) Enterprise Board (E-Board) is used by the Army Materiel Command (AMC) — Army Sustainment Command (ASC) wide. It provides the ASC, Army Field Support Brigade (AFSB) commanders and staff mission critical information needed to identify potential problem areas, systemic issues with the command, trends across sites and /or mission areas, opportunities to apply continuous improvement techniques, opportunities to replicate best practices and standardize processes where possible, and metrics for tracking and analyzing process improvements. The information in E-Board strongly influences and impacts the Army by directly affecting the Soldier.

E-Board gives ASC the ability to analyze data related to safety and maintenance of equipment, and materially impacts the effectiveness, efficiency, and productivity of ASC in accomplishing its mission. Further, The E-Board will create a community of knowledge to share best practices, identify problem areas that are electronically accessible.

The information for the ASC Enterprise Board comes principally from qualitative data sources such as ALSET assessments, AMC Rapid Review Team assessments, OIP assessments, AAA audits, GAO audits, Internal Review audits, MCP annual statements, Weekly commander SITREP, Commander SPOT reports, and Commander Critical Command Information Requirement submissions. This qualitative data needs to be converted to quantitative data by

techniques used in computer assisted qualitative data analysis software. The quantitative data then can be assessed by multiple dimensions such as ASC's major mission areas (Contracting, Material Management, Field Support, LOGCAP, RESET, and APS), subordinate command, sites, functional area, process, staff proponent, and source of issue. The quantitative data will aid in identifying areas that require command action and resources to conduct an external or internal evaluation and/or continuous improvement project, e.g., Lean Six Sigma. These techniques include but are not limited to employing analytical tools and software such as statistical analysis, risk analysis, and simulations. Inclusive dates: 2007- present.

Source input data is keyed in manually as well as migrated from another ASC system (Organization Inspection Plan Management System (OIPMS) and is approved for disposition under 25-1kkk/400B (0-6). System documentation includes record layouts, specifications, and code books which are covered under 25-1mmm/400B(0-6). Output: Final reports and out-briefs from Inspections and Audits. Automated system administrative outputs and reports use RN 25ijiji/400B, Information Technology.
