## 1. Recreation Management Information System (RMIS)

Description of System. RMIS is a web-based BLM-internal application that aggregates information pertaining to BLM land used for public recreation purposes. In addition to information about recreational use, authorizations, and designations, RMIS provides data for visitation estimates, recreation site descriptions, and details about recreation permits and leases. This information is used for a variety of purposes, including providing details for Public Land Statistics, the Chief Financial Officer's Report, and various external publications, such as Public Lands, Public Rewards. In addition, information is used at the field level to document recreation activities and authorizations at the recreation site, recreation management area, and/or field office level. Information is used for NEPA documentation and reviewing trends in recreation use. This system is accessible only to BLM employees within the firewall. This information is entered into the system by an end user (authorized BLM Employee). The oldest data in the system dates back to fiscal year 1999, and new data is entered daily. Records are dated from 1999 – present.

Master File. The information collected in the database produces specific and aggregated information about the number of visitors, special recreation permits issued, participation in specific recreational activities, public land acres, area designation acres, national landscape conservation system units, recreation site details, off-highway vehicle designation acreage, associated planning documents, partnerships and agreements, special recreation permits, and contact information for the overseeing BLM office

## DISPOSITION PERMANENT

Cutoff at end of Fiscal Year Transfer full dataset and one public use version to the National Archives upon approval of this schedule under 36 CFR 1235 44 through 50, or whatever standards are in place at the time of the transfer A <u>full</u> copy of the dataset, containing subsequent changes and additions as well as unchanged data, should be transferred to the National Archives every three years to <u>replace</u> the previously transferred dataset
