

## Request for Records Disposition Authority

Records Schedule Number           DAA-0237-2020-0002

Schedule Status                     Approved

  

Agency or Establishment           Federal Aviation Administration

Record Group / Scheduling Group   Records of the Federal Aviation Administration

Records Schedule applies to       Agency-wide

Schedule Subject                   Automatic Dependent Surveillance - Broadcast (ADS-B) Service  
Availability Prediction Tool (SAPT)

Internal agency concurrences will be provided   No

Background Information

The ADS-B SAPT predicts whether the GPS constellation will support, for a particular route of flight and avionics, position information which has the needed accuracy and integrity for surveillance (ADS-B) or navigation (RAIM).

The Federal Aviation Administration (FAA) finds it is necessary that pilots, dispatchers, and commercial operators meet the minimum position accuracy and integrity performance requirements to operate in ADS-B-designated airspace.

SAPT is an Internet-accessible (web-based) application with multiple interfaces for predicting, for a given flight plan, whether or not an ADS-B surveillance meeting specified standards are available for the duration of the flight. The SAPT prediction is based upon: (1) the time, route, and airspace of the planned flight; (2) ADS-B-related avionics on the subject aircraft; and (3) the announced status of the Global Positioning System (GPS) satellite constellation. If the GPS position is not accurate enough for ADS-B surveillance, SAPT can check for backup surveillance.

	Locations.dat.,contains the grid mask for outages calculations. Resolution is set to .5 degree lat/long. Capital cities and tier 1 airports included. locations_highres.dat, contains the grid mask for outages calculations at higher resolution than the legacy version. Resolution is set to .125 degrees. Outages.dat,contains records defining predicted periods of GPS	

RAIM unavailability. Resolution of the outages is set to .5 degree lat/long. outages\_highres.dat, contains records which define predicted periods of GPS RAIM unavailability. Resolution of the outages is set to .125 degrees lat/long. last\_outages.dat: contains a Unix timestamp number that is updated after completion of 24+ hours of outages calculation. Its intended use is for a client to determine if the outages files (outages.dat, outages\_highres.dat) on the server has been updated and may be requested.
