Records Control Schedule

The Intelligence Reform and Terrorism Prevention Act of 2004, which directed the establishment of the Information Sharing Environment, also required the President to designate a Program Manager with government-wide authority to manage the ISE and assess its implementation by Federal agencies. The primary focus of the PM-ISE is any mission process, anywhere in the United States, that is intended or is likely to have a material impact on detecting, preventing, disrupting, responding to, or mitigating terrorist activity. The core mission processes include terrorism watch listing; screening and related homeland security, intelligence, and law enforcement activities; and weapons of mass destruction-related information sharing and access.

Application of the Records Control Schedule Disposition Instructions

The disposition instructions in the records control schedule are mandatory. Any Federal records received or created by ISE personnel or contractors not specifically covered by this schedule or the General Records Schedules are to be retained until such time as an applicable disposition authority approved by the National Archives and Records Administration (NARA) is obtained. To take into account the fluid nature of electronic filing, those responsible for implementing this schedule should be aware that record copies of record types described in this schedule are to receive the prescribed disposition wherever they are filed.

The Information Management Technical Officer with responsibility for the records of the ISE will support effective implementation of the disposition requirements of this schedule through the development and issuance of appropriate operational guidance and supplementary instructions necessary to assure adequate and proper documentation of the official mission, responsibilities, and actions of the component.

Note on Sensitivity of ISE Records

Many of the records addressed in this schedule are classified as national security information in accordance with statutory and national policy directives. Many of the records series described in this schedule contain information classified to the highest levels, requiring planning for their continued security until they are declassified or destroyed. The user of this schedule should assume the subject records are highly classified unless noted otherwise. In addition, certain series may contain material covered by Privacy Act or Freedom of Information Act restrictions other than National Security, such as law enforcement information or commercially sensitive ("trade secrets") information. An effort has been made to note these series.

Note on Vital Records

Although no vital records are currently identified in this schedule, records management personnel should be alert to the need to identify such records so that they can be accessed quickly when needed. Vital records are (1) those that specify how the ODNI will operate in case of an emergency or disaster, (2) those necessary to the ODNI's continued mission critical operations during and after an emergency, and (3) those that must be preserved to protect the legal and financial rights and interests of the ODNI and of persons affected by the ODNI.

Note on Electronic Records

The ISE and staff maintain record copies of many official files in electronic form on both shared and individual network drives. In addition, some staff members may keep some files on their individual local drives, although this is discouraged. Records kept on both the network and local individual drives that are not disposable under the General Records Schedules (GRS) are to be

moved or copied to the network shared drives or systems or kept in paper files, as appropriate, to be retained or destroyed in accordance with an approved ODNI disposition authority.
