The National Archives and Records Administration is a public trust on which our democracy depends. We enable people to inspect for themselves the record of what Government has done. We enable officials and agencies to review their actions and help citizens hold them accountable. We ensure continuing access to the records that document the rights of American citizens, the actions of Federal officials, and the national experience.

To ensure that we preserve the past to protect the future, the National Archives and Records Administration (NARA) appraises, accesses, arranges, describes, preserves, and makes available to the public the historically valuable records of the three branches of Government. We establish policies and procedures for managing U.S. Government records. We assist and train Federal agencies in documenting their activities, administering records management programs, scheduling records, and retiring non-current records to regional records services facilities for cost-effective storage. We manage a nationwide system of Presidential libraries, records centers, and regional archives. We administer the Information Security Oversight Office, which oversees the Government’s security classification program. We publish the Federal Register, Statutes at Large, Government regulations, and Presidential and other public documents.

We serve a broad spectrum of American society. Genealogists and family historians; veterans and their authorized representatives; academics, scholars, historians, and business and occupational researchers; publication and broadcast journalists; the Congress, the Courts, the White House, and other public officials; Federal Government agencies and the individuals they serve; state and local government personnel; professional organizations and their members; supporters' groups, foundations, and donors of historical materials; students and teachers; and the general public all seek answers from the records we preserve.

To be effective, we must determine what records are essential, ensure that Government creates such records, and make it easy for users to access those records regardless of where they are, or where the users are, for as long as needed. We also must find technologies, techniques, and partners worldwide that can help improve service and hold down costs, and we must help staff members continuously expand their capability to make the changes necessary to realize our goals.

Our Mission:

NARA serves American democracy by safeguarding and preserving the records of our Government, ensuring that the people can discover, use, and learn from this documentary heritage. We ensure continuing access to the essential documentation of the rights of American citizens and the actions of their Government. We support democracy, promote civic education, and facilitate historical understanding of our national experience.
Our Strategic Goals:

• **One:** As the Nation's record keeper, we will ensure the continuity and effective operations of Federal programs by expanding our leadership and services in managing the Government's records.

• **Two:** We will preserve and process records to ensure access by the public as soon as legally possible.

• **Three:** We will address the challenges of electronic records in Government to ensure success in fulfilling NARA’s mission in the digital era.

• **Four:** We will provide prompt, easy, and secure access to our holdings anywhere, anytime.

• **Five:** We will increase access to our records in ways that further civic literacy in America through our museum, public outreach, and education programs.

• **Six:** We will equip NARA to meet the changing needs of our customers.

These goals and the strategies to achieve them are detailed in *Preserving the Past to Protect the Future: The Strategic Plan of the National Archives and Records Administration, 2006-2016*, which was revised and re-issued in September 2009. This annual performance plan is based on the goals, strategies, and long-range performance targets in our Strategic Plan, and builds on accomplishments in FY 2009. It details the actions and outcomes that must occur in FY 2010 for us to move forward on meeting the goals and targets in our Strategic Plan. In addition to listing performance goals and measures for evaluating our performance, the plan describes the processes, skills, and technologies, and the human, capital, and informational resources needed to meet the year’s performance goals. We received no aid from non-Federal parties in preparing this plan.

Following is a summary of the resources, by budget authority, we received to meet our FY 2010 objectives. Our budget is linked to the performance goals in this plan.

This is a high-level summary of our resource requirements. The numbers are linked to strategic goals in the pages that follow.

We continue using four mechanisms to measure actual performance: (1) periodic management reviews, (2) formal audits of operations, (3) expansion and refinement of our performance measurement system, and (4)
systematic sampling of measurement system effectiveness. In FY 1999 we deployed our agency-wide Performance Measurement and Reporting System (PMRS). This system allows us to define and consistently measure data critical to the analysis of our performance objectives. Every year we integrate and expand the system further so that our strategic performance is measured using more of a balanced scorecard approach for tracking cycle times, quality, productivity, cost, and customer satisfaction for our products and services.

Our performance measurement system, which we continuously work to improve, takes advantage of web infrastructure to collect performance data from the more than 70 organizational units that send data to PMRS from all over the country. We also use robust, enterprise-level databases to store the data and generate reports, instead of high-maintenance desktop databases previously used. As a result, we are able to collect our performance data more consistently and more efficiently and store much more data for use in analyzing trends. We have leveraged this technology and operationally integrated data collection to create a performance measurement database that serves the entire agency and is the single strategic performance data source for the agency.

Our program management system (PROMT) controls costs and schedules on a variety of programs including the Electronic Records Archives (ERA) program. PROMT integrates several commercial-off-the-shelf program management tools in a Windows-based web environment to help us schedule and link project activities, assign resources, collect and report costs, calculate earned value, and analyze impacts and risks to the ERA program. PROMT incorporates an EIA-748 compliant tool that meets OMB and GAO requirements for calculating earned value. We also implemented project management guidance throughout the agency to standardize the use of these and other project management tools and processes.

We must succeed in reaching our goals because the National Archives and Records Administration is not an ordinary Federal agency. Our mission is to ensure that Government officials and the American public have continuing access to essential documentation, and this mission puts us at the very heart of homeland security, continuity of government, public trust, and the national morale. Whether publishing the emergency Federal Register, protecting the critical records assets of Federal agencies nationwide, serving American’s veterans, solving the challenge of saving electronic information independent of time, place, or the format in which the records were created, or displaying our nation’s Charters of Freedom—the Declaration of Independence, the Constitution, and the Bill of Rights—to inspire the American public, NARA plays a critical role in keeping America safe, secure, and focused on our democratic ideals. This performance plan is our FY 2010 road map for meeting the great expectations of our nation.
STRATEGIC GOAL 1  AS THE NATION’S RECORD KEEPER, WE WILL ENSURE THE CONTINUITY AND EFFECTIVE OPERATIONS OF FEDERAL PROGRAMS BY EXPANDING OUR LEADERSHIP AND SERVICES IN MANAGING THE GOVERNMENT’S RECORDS

Long Range Performance Targets

1.1 By 2016, 50 percent of agencies achieve passing scores for compliance with Federal records management policy.

1.2 By 2016, 90 percent of customers are highly satisfied with NARA records management services.

1.3 By 2016, records management transactions serviced by the Federal Records Centers Program grow by 6 percent.

1.4 Within 30 days of the end of an administration, 100 percent of Presidential and Vice Presidential materials have been moved to NARA locations or NARA-approved facilities.

FY 2010 Resources Available to Meet This Goal: $45,985,000; 1,678 FTE

Long Range Performance Target 1.1  By 2016, 50 percent of agencies achieve passing scores for compliance with Federal records management policy.

FY 10 Estimated Performance

• 50 percent of agencies’ records management self-assessments received by NARA.

• Conduct one records management inspection.

Outcome  NARA will promote and examine compliance with Federal records management policy throughout Federal agencies. We will leverage our leadership position and expertise to focus on oversight activities designed to monitor and assist agencies with their Federal records management responsibilities. We will work with agencies to ensure that they understand the effectiveness of their records management
plans and programs in meeting the needs of the agency, government, and citizens. Records management is
the best tool for ensuring that the essential records required for the day-to-day operation of Government
business are available and recoverable in the event of an emergency. Records management should be
integrated into Federal business processes so that records are routinely identified, retained, and maintained
and available for normal operational needs and in emergency situations. Expanding the integration and
effectiveness of records management planning and programs will produce cost savings and greater
Government-wide efficiency. Our nation’s history is deeply rooted in the business of government. For
citizens to understand their role in the process of government, records of archival value must be preserved.
Identifying these records and developing strategies to ensure their availability to the American people is a
vital records management function.

Significance  The Federal Government must identify and protect records from the time of their creation so
that they are available to operational staff at critical times, and are later preserved and made available to the
public. Preserving our nation's records ensures that they are protected for the future, and available to
document the rights of our citizens, Federal government actions, and the historic experience of our nation.

Means and Strategies  NARA’s Strategic Directions for Federal Records Management is our plan for
creating relationships with agencies that advance records management as a part of the Government’s
mission. We are demonstrating that effective records management adds value to agency business
processes, and our guidance, training, and assistance to agencies focuses on using records management as
an important tool for supporting agency business processes.

Through survey mechanisms, we have been able to assess that senior agency managers recognize the
importance of records management and its benefit as a risk mitigation tool. Since FY 2005, we have
experienced steady growth in agency staff attending records management training to increase their
awareness and knowledge of records management policies and practices. To guarantee the availability of
these records to citizens both now and in the future, we must ensure that agencies understand and comply
with records management policies and effectively manage these important assets.

In FY 2008 GAO issued a report entitled “Federal Records – National Archives and Selected Agencies
Need to Strengthen E-Mail Management.” GAO recommended that the National Archives exercise its
authority as defined in the Federal Records Act and implement oversight mechanisms to ensure that
agencies follow necessary records management guidelines so that important federal records are not lost or
destroyed. GAO notes we must report our findings to OMB and Congress. As a result of these
recommendations, in FY 2009, we developed a methodology and process for conducting records
management oversight activities for Federal agencies and mechanisms for reporting the results to Congress
and OMB. In FY 2010, we will implement this methodology to conduct oversight activities.

**Milestones**

**FY 2005**

**FY 2006**
- Survey of Federal agencies (CIOs) to assess their view of their records management programs completed.
- Two records management studies of Federal agencies completed.

**FY 2007**
- Survey results analyzed to expand to senior Federal agency managers to assess their views of their records management programs as positive tools for risk mitigation.
- One records management study of Federal agencies completed.

**FY 2008**
- Senior Federal agency managers surveyed to assess their views of their records management programs as positive tools for risk mitigation.
- Two records management studies (i.e. Recordkeeping Study and Flexible Scheduling Study) of Federal agencies completed.

**FY 2009**
- Survey results analyzed and additional advocacy and training strategies discussed.
- Methodology and process for conducting and reporting records management oversight activities developed.

**FY 2010 Estimated**
- Agency self-assessment of their records management program conducted.
- One agency inspection conducted.
- Results of government-wide agency self-assessment analyzed.

**Data source** Performance Measurement and Reporting System and quarterly performance reports to the Archivist.

**Definitions**

**Risk Mitigation:** Determining the value of information as a business asset in terms of its primary and secondary uses in the business process; identifying potential risks to the availability and usefulness of the information; estimating the likelihood of such risks occurring; evaluating the consequences if the risk occurs; and managing the information based on that analysis.

**Long Range Performance Target 1.2**

**By 2012, 90 percent of customers are highly satisfied with NARA records management services.**

**FY 10 Estimated Performance**
- Digitize and post all approved agency records schedules from 1973 to present on NARA’s public web site.
- Increase by 5 percent the number of distance learning course offerings.

**Outcome**

NARA will improve Government-wide records management by providing services that meet the needs of records managers and operational staff across the Government. A significant indicator of NARA’s success is the satisfaction of its customers, Federal managers, and employees throughout the Government. NARA will meet customer needs through providing prompt and responsive service, effective and educational training, and by facilitating the ongoing review of Federal records management practices.

NARA will improve and increase the guidance that it provides to Federal agencies to support meeting their records management responsibilities and challenges. NARA will also increase the Government’s records management capability through studying records management challenges particular to Government and through training and certifying new records managers in every Federal agency.

**Significance**

NARA’s ability to provide agency records managers with the guidance, tools, and assistance
they need to meet their agencies’ business needs is critical to ensuring effective operations of Federal programs. The managers and operational staff that generate the records vital to Government operations and our nation’s history must have the training and tools necessary to fulfill their obligation to the public.

**Means and Strategies** NARA’s success in providing agencies with the records management tools they need is the basis for evaluating its service to the Federal Government. Records managers are the most important audience for NARA’s records management services, and they are best able to judge our success. In FY 2006 we surveyed Federal records managers about their satisfaction with NARA’s scheduling and appraisal services. Since then we have expanded the survey to gauge customer satisfaction with NARA records management services, including scheduling and appraisal services, electronic records guidance, and records management training services.

NARA is using the results of the surveys to identify ways to improve our services to agency records management programs and government-wide records management. As outlined in our Strategic Plan, we will expand the demand for records management in the Federal Government by advocating for it at senior levels. By providing guidance, training, and assistance throughout the Government, we will support agencies’ business needs and embed records management in the agencies’ business processes and systems. In FY 2010 we will analyze the results and implement improvements identified from our surveys. We will scan and provide access to approved agency records schedules on the NARA public web site. This will provide agencies with a repository of information to facilitate rapid records schedule development, enable cross records management program comparisons for effectiveness, and provide an active list of all approved schedules for ongoing inventory development.

The NARA National Records Management Training Program continues to provide a curriculum designed to enhance and improve the knowledge and skills of Federal records managers. Since FY 2007, we have evaluated and updated our records management certification program to improve certification testing, update training materials to reflect regulatory and procedural changes, and improve the instructional design. In FY 2009 we explored ways to expand our reach through webinars and other distance learning techniques. In FY 2010 we will incorporate the 2009 regulatory changes and establish a baseline for measuring the success of our distance learning activities.

A critical tactic for improving customer satisfaction is the redesign of the processes by which Federal records overall are identified, appraised, scheduled, and tracked while in agency custody. Part of the strategy for carrying out this plan is the continued development of the Electronic Records Archives, an application that supports the scheduling and accessioning of Federal records. We successfully achieved initial operating capability of ERA in FY 2008. Continued development of this tool will make it easier for agencies to inventory their records and for NARA to review and approve records schedules and ensure that essential documentation is not lost.

**Key external factors** Records management professionals must be self-motivated to attend training and complete NARA’s certification program.

### Milestones

**FY 2005**

- Automated workflow and collaboration tools to support the redesigned scheduling and appraisal process prototyped.
- Needs assessment of government and IT industry for the development of select records management service components for the Federal Enterprise Architecture conducted.
- Cooperative records project for at least one FEA Business Reference Model Sub-function participated in.

**FY 2006**

- Guidance to agencies on recordkeeping policies and procedures for Federal Government information on the Internet and other electronic records issued.
- Request for Information (RFI) for industry to respond to requirements for development of one or more RMSC developed.
- RMSC program management plan based on analysis of industry response to RFI updated.
- Flexible schedule pilots with 2 more Federal agencies completed and results analyzed.
- Cooperative records projects for an additional FEA BRM sub-function participated in.
- Toolkit for Managing Electronic Records “proof-of-concept” web portal launched and agency comments solicited.

**FY 2007**

- First official version of the Toolkit for Managing Electronic Records portal launched.
- Records Management Services registered into Core.gov.

**FY 2008**

- Effectiveness of flexible schedules for agencies and NARA assessed.

**FY 2009**

- Customer Satisfaction Survey issued.
- Distance learning techniques to expand customer base selected.

**FY 2010 Estimated**

- Customer Satisfaction survey results analyzed and improvements implemented.
- Baseline of participants using distance learning tools established.

Definitions  Records Management Services (RMS): a piece of software providing services that support the creation, management, transfer, and destruction of electronic records within a computing environment. Cooperative records project: a project that results in a model schedule, a standardized process, or other common product that standardizes records management for a specific FEA Business Reference Model sub-function across multiple agencies performing that sub-function. For example, agencies engaged in providing investigative services would be considered as one cooperative records project. Proof of concept: demonstration of new technology to show that an idea works.

Long Range Performance Target 1.3  By 2016, records management transactions serviced by the Federal Records Centers Program grows by 6 percent.

FY 10 Estimated Performance  

- Increase number of records management transactions serviced by FRCP by 1 percentage point.
- Make ready 97 percent of Federal agency reference requests within the promised time.
- Answer 80 percent of written requests to the National Personnel Records Center within 10 working days.
- Achieve 87 percent customer satisfaction at NPRC.
- Deploy ARCIS in remaining records centers.
- Implement Increment 3 of ARCIS at Federal Records Centers.

Outcome  The outcome of our actions is that we provide superb service and customer-responsive solutions to Federal agencies. As a result, Federal agencies can economically and effectively create and manage paper and electronic records necessary to meet business needs, and records of archival value are preserved.

Significance  The NARA Federal Records Centers Program (FRCP) plays a vital role in the lifecycle of Federal records. The program helps agencies manage the transfer, storage, and servicing of their non-current records and works closely with NARA’s records management program to ensure that agencies’ vital records are efficiently and appropriately managed for as long as needed. As more Federal records are created and managed in electronic formats, NARA is responding by focusing on customer requirements and providing economical and effective electronic records services at our records centers.

Means and Strategies  Since FY 2000, NARA’s Federal Records Center Program (FRCP) has been fully reimbursable, allowing us to be more flexible in responding to agency records needs, and requiring us to meet those needs in a cost-effective and efficient way. Our ability to satisfy and retain our customers is dependent on our ability to meet their needs and to anticipate the kinds of services that will be most useful to them. Over the last several years, we have piloted and tested a variety of electronic records services. Until NARA’s Electronic Records Archives (ERA) program can provide complete online servicing, we will continue to test the delivery of new offline services for electronic records, including digitizing records into electronic formats, storage of agencies’ electronic records on media, and remote servicing of electronic
records, for example, electronic Official Military Personnel Files (OMPF). The FRCP completed a project to analyze the business case and options for launching electronic Federal Records Center services in 2010.

The FRCP is replacing its legacy systems for inventory and space management with modern systems that provide enhanced functionality at a reasonable cost. All of the current FRCP applications are mainframe-based and written in COBOL and have been operational for nearly 20 years. Most importantly, these systems no longer support the new FRCP reimbursable financial environment. The newly developed and recently deployed Archives and Records Center Information System (ARCIS) provides robust inventory and space management for more than 25 million cubic feet of records through a web-based application for all FRC business transactions. ARCIS enables Federal agencies to better manage records throughout the records lifecycle, and will enable the FRCP to better measure all facets of FRCP performance. ARCIS was deployed to all NARA’s Federal Records Centers FY 2009 through early FY 2010. Increment 3 of ARCIS will be implemented during FY 2010. This increment will include integration of retrieval tools for military and civilian personnel and medical records in the National Personnel Records Center in St. Louis, improved reporting capabilities and an enhanced customer portal.

Key external factors The Federal Records Center Program operates in a competitive business environment, which allows Federal agencies to choose their records center services provider. Testing and enhancing remote servicing capability for electronic official military personnel files (OMPF) is contingent on agreements with military service departments for NARA to access their systems.

**Milestones**

**FY 2005**
- Records Center Program business model for electronic records developed.
- Pilot study for converting agency records into digital formats on electronic record media completed.
- Concept of operations and functional requirements for an Archives and Records Center Information System (ARCIS) developed.
- Physical requirements to store electronic media studied.

**FY 2006**
- Remote servicing capability for electronic OMPFs offered to 4 military service departments.
- Pilot program to store backup and inactive copies of agency electronic media in selected record center locations completed.
- Indexing and delivery of scanned records services through a pilot digital conversion program assessed.
- Electronic records storage environment at Washington National Records Center constructed and operational.

**FY 2007**
- Results of a production scan pilot implemented.
- Contract for ARCIS awarded.
- E-media storage services rolled out in three records centers.

**FY 2009**
- Rollout of ARCIS to nearly all Federal Records Centers completed.
- Baseline customer satisfaction with National Personnel Records Center services established.
- NPRC agreements with the Office of Personnel Management to service requests using electronic Official Personnel Files (OPFs) of former federal civilian employees implemented.
FY 2010 Estimated
• ARCIS reporting capabilities improved and customer portal enhanced.
• eFRC Business Case completed and deployment decision reached.

Data source Performance Measurement and Reporting System and quarterly performance reports to the Archivist.

Definitions
Federal agency reference request: a request by a Federal agency to a records center requesting the retrieval of agency records. Excludes personnel information requests at the National Personnel Records Center.

Long Range Performance Target 1.4 Within 30 days of the end of an administration, 100 percent of Presidential and Vice Presidential materials have been moved to NARA facilities or NARA-approved locations.

FY 10 Estimated Performance
• Reference Long Range Performance Target 2.2 for future milestones.

Outcome Immediately upon the end of a Presidential Administration, NARA takes custody of Presidential records, both textual and electronic, and the Presidential artifacts for transportation to and storage at a new Presidential Library. The records of an outgoing administration are secured, inventoried, and accessible to appropriate special access requesters under the terms of the Presidential Record Act (PRA), including the outgoing and incoming Presidents, Congress, and the Courts.

Significance The Presidential Libraries Acts of 1955 and 1986 authorize NARA to oversee a system of Presidential Libraries. Through these Libraries, NARA provides access to the evidence of history, giving visitors to our research rooms, museums, and public programs firsthand knowledge of the President, the Presidency, and American history. We provide for the transfer and processing of the official records for each Presidential administration. Inventories of Presidential and Vice Presidential records enable the transfer of the records from the White House to NARA, establish basic intellectual control, and facilitate access to the records in the immediate post-Presidential period. In addition, because the PRA mandates that the records of the Administration be available to Freedom of Information Act (FOIA) requests five years after the President leaves office, sound intellectual control prepares the Presidential Library to respond to research demands.

Means and Strategies NARA works closely with each incumbent Administration to ensure that Presidential records are ready for transfer to NARA as soon as an Administration ends. We assist the outgoing Administration in planning and preparing the records for transfer. We work with Administration staff on records issues and transfer strategies. And finally, at exactly 12:01 p.m. on January 20th, we take legal custody of the records, transferring them to their temporary destination where they are inventoried and managed until they can be moved into their final destination at a new Presidential Library.

The Bush Administration transferred to NARA more textual and exponentially more electronic Presidential and Vice Presidential records than any earlier Administration. To ensure the preservation of these records for historical, informational, administrative, and evidentiary purposes and to prepare for the transfer of Presidential and Vice Presidential records to our custody, we worked with White House and Vice Presidential staffs to account for Presidential records, in all formats, held in Presidential, First Lady, and Vice Presidential staff offices and other file locations. We provided support to the White House Offices managing records and artifacts, including the White House Office of Records Management (WHORM), the White House Office Gift Unit, the White House Communications Agency, the Office of the Vice President, and the National Security Council Access and Records Management Staff.
Early staffing is key to success because of the advanced training the staff need to perform this work. Staff must be trained to accomplish the exacting reviews required under the PRA and FOIA to ensure that the Presidential records are available in accordance with the Act. Staff must become familiar with the Administration’s holdings, including the artifacts.

**Key external factors** Our success depends on successful planning with the outgoing and incoming White House staffs.

### Verification and Validation

| FY 2006 | • Processed Clinton Presidential and Vice Presidential records opened on January 20, 2006. |
| FY 2007 | • 5 staff (4 archivists and 1 registrar) hired for George W. Bush Presidential Library. |
| FY 2008 | • Additional staff to support preparation and move of George W. Bush Administration records hired.  
• Leased space for temporary storage of George W. Bush Administration records procured.  
• Inventories or other information about Presidential and Vice Presidential traditional and electronic records and artifacts gathered to aid in preparation for their relocation from Washington, DC, to the project site or ingestion into NARA’s electronic records system. |
| FY 2009 | • Temporary facility for George W. Bush Administration records occupied.  
• 100 percent of George W. Bush Administration Presidential and Vice Presidential records and artifacts transferred to NARA.  
• Additional staff and 1 Director hired for George W. Bush Library. |

**Data source**: Performance Measurement and Reporting System and quarterly performance reports to the Archivist.

**Definitions**  
**Inventory**: a listing of the volume, scope, and complexity of an organization’s records.
STRATEGIC GOAL 2  WE WILL PRESERVE AND PROCESS RECORDS TO ENSURE ACCESS BY THE PUBLIC AS SOON AS LEGALLY POSSIBLE

Long Range Performance Targets

2.1 By 2016, 85 percent of scheduled transfers of archival records are received at the scheduled time.

2.2 By 2016, 95 percent of archival holdings have been processed to the point where researchers can have efficient access to them.

2.3 By 2012, 90 percent of agency declassification programs earn high scores from ISOO.

2.4 By 2016, NARA archival holdings of 25-year-old or older records are declassified, exempted, or referred under the provisions of Executive Order 13526.

2.5 By 2016, 100 percent of archival holdings are stored in appropriate space.

2.6 By 2014, 100 percent of NARA records center holdings are stored in appropriate space.

2.7 By 2016, less than 50 percent of archival holdings require preservation action.

FY 2010 Resources Available to Meet This Goal: $193,591,000; 733 FTE

Outcome Records of archival value are preserved for future generations.

Significance Technology and the movement of the computing environment to Federal workers’ desktops have led to a decentralized records management environment. While this enables workers to create and manage their own records (such as e-mail), it has also resulted in a proliferation of both electronic records formats and locations where records are created and stored. In this new environment, traditional paper-based records management control techniques and procedures are often no longer appropriate, resulting in a Federal records management approach that is not well integrated into agency business process, systems development, information technology infrastructure, and knowledge management. This undermines the authenticity, reliability, integrity, and usability of Federal records and information essential for Government business, particularly electronic Government, and public use. We must guarantee the continuing accessibility of the records of all three branches of our Government regardless of the media on which they were created. We must instill the importance of transferring to NARA all records on schedule, regardless of format, according to their disposition authority to minimize loss of Federal records protecting our rights as citizens, demonstrating our government’s accountability, and preserving information of historical relevance.

Means and Strategies NARA established, in the Electronic Records Archives (ERA) system, the basic IT infrastructure needed to implement NARA’s reengineered business processes for Government-wide lifecycle management of records and to manage electronic transfers and storage of electronic records in their original formats. We deployed the initial operating capability (IOC) release of the ERA system in June 2008. Available to only four pilot agencies, this initial release was designed to enable submission of records schedules and the transfer of records to the legal custody of the National Archives. ERA will also provide the management and technology controls to enable long-term preservation and sustained access to electronic records. In FY 2010, NARA is expanding the ERA pilot activities to include at least 20 additional agencies.
NARA will continue to work closely with individual agencies to address electronic records issues. Past partnership efforts with agencies to schedule records in core function electronic systems had positive results, with more than 2,000 electronic records and systems scheduled since FY 2006. To underscore the importance for agencies to continue scheduling electronic records and systems, NARA re-issued a bulletin in FY 2008 reminding agencies to schedule all of their existing electronic records and systems by the end of FY 2009. We worked with agencies throughout FY 2009 to facilitate this process. In FY 2010, NARA issued a new electronic records scheduling bulletin that requires agencies to report semi-annually to NARA on their scheduling activities. We will analyze the data received from agencies on their electronic records scheduling activities and determine what remains to be scheduled and what records should be identified for transfer to NARA.

To assist us in setting priorities for helping Federal agencies deal with records management, we developed a set of criteria, procedures, and a handbook for identifying the functional areas within the Government that contain the greatest records management challenges. These areas continue to be our highest priorities for allocating NARA records management resources. In FY 2009, we experienced an increased percentage of Federal agencies transferring permanent records to NARA as expected. We will continue to focus our attention on records that are at greatest risk of not being managed effectively, records that document citizens’ rights and Government accountability, and records of archival value. With the volume of these records increasing every year, we will continue this practice throughout FY 2010, while also working to improve the timeliness of records transfers to NARA. In FY 2009, we targeted the electronic records of CFO Act Agencies and other selected agencies to comply with the E-Government Act of 2002. In FY 2010, we will work with agencies to increase the volume of electronic records scheduled while also developing new strategies and approaches for promoting awareness of scheduling in agencies. With approaches such as the pre-accessioning of electronic records into NARA, we can achieve earlier processing, description, and preservation, while avoiding the loss of records that may occur with lengthy agency retention.

Key external factors Federal agencies must schedule their records. Agencies must agree to transfer their permanently valuable records to us. Federal agencies must implement Federal electronic records management standards.

Milestones

FY 2005

- Federal agency program-related systems (245) that generate electronic records identified and scheduled.
- Web snapshots of Federal Government web sites at end of last Presidential term collected.
• Alternative approaches to putting legacy records control schedules into an ERA repository analyzed.
• Pre-accessioning of electronic records discussed with six agencies.

**FY 2006**
• Two more transfers of electronic records pre-accessioned.

**FY 2007**
• Pilot repository with legacy records control schedules populated to facilitate migration of the schedules into ERA.
• Two standard templates for records transferred to NARA outlined.

**Data source** The Performance Measurement and Reporting System and quarterly performance reports to the Archivist.

**Definitions**
- **Accessioned:** Legal custody of archival materials is transferred to NARA.

---

**Long Range Performance Target 2.2**

**By 2016, 95 percent of archival holdings have been processed to the point where researchers can have efficient access to them.**

**FY 10 Estimated Performance**

- Increase by 10 points the percent of archival holdings that have been processed to the point where researchers can have efficient access to them.

- Train new archival staff in the processing of Presidential records.

**Outcome** More of NARA’s holdings are available to the public.

**Significance** We must guarantee the continuing accessibility of the records of all three branches of Government. If we cannot do this, citizens, businesses, and the Government will lose the essential documentation necessary to prove their legal rights; the Government will suffer loss of both accountability and credibility; and as a nation our ability to learn about and understand our national experience will be diminished substantially. Moreover, as the business of government shifts more and more to electronic government and reliance on information technology, activities such as collecting taxes, providing veteran's benefits, and protecting our environment will suffer in both efficiency and effectiveness unless agencies are able to create, maintain, and readily access reliable electronic records (see target 3.1).

**Means and Strategies** *Archival processing* involves all the steps needed to open a record to the public. It includes establishing basic intellectual control, and flagging records that have privacy issues, national security classification, or other restrictions or exemptions. It also includes providing descriptions of the records content, if necessary to understand, the context in which the records were created, and performing initial preservation so that the records may be served to the public. New technology has created increased opportunities for easier and faster access to our holdings. However, the same technology has led to more records being created. The result is that new records have been *accessioned* (transferred to the legal custody of the National Archives) faster than they could be processed. This has created a backlog of holdings that has been growing for decades. To reduce this backlog and increase public access to holdings, we re-engineered our business process to increase processing efficiency, we reassigned staff to processing, and we implemented 5-year processing plans customized to some archives locations, to ensure that we eliminate our backlog while processing incoming records.

We recognize that the growth of NARA’s archival workforce has not kept pace with the increase of records accessioned each year. This situation was exacerbated by an agency-wide hiring freeze in 2006 and 2007.
Besides the shortfall in archival staff, we are also faced with an aging workforce. It is imperative that NARA build an archival staff able to handle the increasingly complex workload ranging from traditional paper documents more than 100 years old to state-of-the-art electronic records. In FY 2010, we plan to hire a cadre of new archivists with the technical skills, organizational competencies, and knowledge needed to address our increasing workload.

In FY 2009, we were funded to add 15 new archivists to our Presidential libraries whose records are governed by the Presidential Records Act. With the addition of these 15 staff, we will be able to dedicate staff to both FOIA and systematic processing. The efficiencies inherent in systematic processing will enable us to open more records than we have been able to do in FOIA processing. We will train these new archivists in FY 2010.

**Key external factors** Progress in processing Presidential records may be hindered by an unusually large number of special access requests or Presidential Records Act (PRA)/FOIA requests and the need to review records page by page.

**Verification and Validation**

*Data reported in 2007 reflects only Washington, DC, area work.

**Milestones**

**FY 2006**
- Clinton Presidential and Vice Presidential records became available to FOIA request on January 20, 2006.
- Workload analysis study for textual records completed.

**FY 2007**
- New business processes for processing archival holdings established for Washington area Federal records established.
- Baseline of unprocessed backlog of archival holdings established and capability to measure it accurately created.

**FY 2008**
- Processing efficiencies in Presidential Libraries and regional archives studied.

**FY 2009**
- Additional staff in Presidential Libraries dedicated to processing hired.
- Processing backlog elimination plans in regional archives implemented.

**FY 2010 Estimated**
- New archival staff for processing Presidential records trained.
- Additional 12 archival staff hired.

**Data source** Performance Measurement and Reporting System and quarterly performance reports to the Archivist.
Long Range Performance Target 2.3  By 2012, 90 percent of agency declassification reviews receive high scores as assessed by ISOO.

FY 10 Estimated Performance  • Increase the percentage of agency declassification reviews receiving high scores as assessed by ISOO over the number in FY 2009.

Outcome  Records are properly exempted, referred, or declassified under the automatic declassification provisions of the President’s Executive Order entitled “classified national Security Information.”

Significance  The Information Security Oversight Office (ISOO), which is administered by NARA, oversees the Government-wide security classification program and reports annually to the President on its status. ISOO collects data about agencies’ programs and conducts on-site reviews to assess those programs. An important component of the security classification program is declassification, in particular the automatic declassification program.

Means and Strategies  Through collaborative working groups, policy revisions, and increased oversight, ISOO will seek to streamline the referral process, reduce redundancies in declassification reviews, promote accurate and consistent declassification decisions, improve equity recognition across the declassification community, develop centralized priorities and management controls around the priorities, and make the declassification process more transparent to the public.

Increased oversight will, in part, take place through assessments of agency declassification programs, which will examine the declassification aspects of an executive branch agency’s security classification program to determine whether an agency has met the requirements established by the President. The review may include the appropriateness of agency declassification actions, the quality of agency actions to identify classified equities of other agencies, and the appropriateness of agency action to exempt records from automatic declassification based upon application of declassification guidance approved by the Interagency Security Classification Appeals Panel or the application of file series exemptions. The results of a review, along with any appropriate recommendations for improvement, are reported to the agency’s senior agency official. During FY 2010 we will assess agency declassification programs and provide recommendations to improve the quality of reviews. We will report the results of the assessments in ISOO’s Annual Report to the President.

Key external factors  Agencies’ cooperation is essential to identifying the records subject to automatic declassification, impediments to meeting the ongoing deadlines, and solutions to these impediments.

### Milestones

**FY 2005**
- Cost-effectiveness study and plan for automating the data for SF 311, including a requirement for electronic reporting, developed.

**FY 2006**
- Agencies Executive branch-wide responsibilities under Section 3.3 of Executive Order 12958 fulfilled and well-positioned to meet initial December 31, 2006, deadline.

**FY 2007**
- December 31, 2006, deadline achieved Executive branch wide.
- Scoring method to evaluate agency declassification programs developed.
- Referral standard streamlined and revised.
- Baseline scores of agency declassification reviews assessed by ISOO established.
- 12 Executive branch declassification reviews conducted.
- Strategy for dealing with classified special media established.

**FY 2008**
- Program for enhancing ISOO’s assessment of declassification review programs in agencies with substantial declassification programs developed.
- Annual assessment of agencies with substantial declassification review activity performed.
- Scoring tool on the declassification reviews of all agencies with substantial declassification review programs tested.
- Recommendations for declassification programs to improve their scores developed.

**FY 2009**
- Agencies with substantial declassification review programs assessed.
- Recommendations for declassification programs to improve the quality of their reviews issued.
- Results of assessments reported in Annual Report to President.

**FY 2010 Estimated**
- Declassification reviews of all agencies with substantial declassification review programs assessed.
- Recommendations for declassifications programs to improve the quality of their reviews issued.
- Results of assessments reported in Annual Report to President.

**Data source** Quarterly performance reports to the Archivist. Information Security Oversight Office, annual reports to the President (http://www.archives.gov/isoo/reports/).

### Long Range Performance Target 2.4
By 2016, NARA archival holdings of 25-years-old or older records are declassified, exempted, or referred under the provisions of Executive Order 13526.

**FY 10 Estimated Performance**
- Increase by 10 percent the number of pages completed in the National Declassification Center (NDC) process.
- Scan 500,000 pages of Presidential records eligible for declassification review as part of the Remote Archives Capture project.

**Outcome** More archival records are declassified and made available for public use.

**Significance** Executive Order 13526, signed on December 29, 2009, requires the declassification of material 25 years old unless specifically exempt. The Government protects millions of classified...
documents at great expense, including more than 390 million pages in our Washington, DC, area facilities and 38 million pages in Presidential Libraries. The majority of these documents, more than 25 years old, no longer require classified protection and can and should be accessible to citizens.

**Means and Strategies** NARA staff continue to focus on the review of eligible records series that are not already being reviewed by the originating agencies. These agencies are ones that receive but do not generate much classified information. We must review these records to identify the equities of other agencies that may still have concerns about information in the records. To handle the reviews required by Executive Order 13526 and the extra work required by the Kyl and Lott Amendments, we hired experienced contract personnel to survey, review, and prepare records for release.

We use the Archives Declassification Review and Redaction System (ADRRES) to track our performance with Federal records against the requirement to have all records over 25 years old appropriately declassified, exempted or referred under the provisions of Executive Order 13526. The Presidential Libraries use the Remote Archives Capture Project to measure their goals for declassification and referral of twenty-five year old Presidential Library equity. We will also use ADRRES and the Unclassified Redaction and Tracking System (URTS) to make electronic records such as the 9/11 Commission records and State Department cables available to agency personnel for their review.

NARA staff continue to work with agencies to resolve the equities in documents referred to them by other agencies. Many of these documents must be reviewed by two or more agencies. NARA will index these documents in the ADRRES database and will make these documents available to the agencies in a systematic fashion to enable them to accomplish their missions, protect permanently valuable federal records, and prevent unauthorized releases of still sensitive information. The Presidential Libraries scanned more than 3.6 million of their 25-year-old Presidential classified material as part of the Remote Archives Capture (RAC) project. They will process agency declassification decisions upon receipt, reviewing and placing opened documents back in the opened Presidential files.

In cooperation with other agencies, NARA has established an interagency referral center and a National Declassification Initiative to provide a systematic approach to the referral process for Federal records. By handling referrals in this manner, NARA retains physical and intellectual control of the records. It gives access to agency reviewers, while allowing NARA to prioritize the order in which referrals are processed so as to deal with records of high research interest in a timely manner. It establishes a standard method for recording agency decisions, ensuring that when NARA staff process the records for release or exemption, the agency determination will be clearly understood and NARA will avoid inadvertent releases of still sensitive information.

To ensure that records released to the public have been properly declassified, NARA has established an Interagency Quality Assurance Team as a component of the National Declassification Center. This team, consisting of representatives from the major classifying agencies, surveys records to determine whether the initial review was adequate prior to the records being processed for the interagency referral center. The team will pass records to the IRC if satisfied with the quality, schedule records for resampling, or send the records to a remediation team if there are too many problems.

It is clear from the results of the quality assurance program that the quality of initial agency reviews is severely impacting the processing of records for the interagency referral center. NARA is working with the agencies to develop standard equity recognition training and a certification program for declassification reviewers. NARA will also develop, in cooperation with the agencies, a web site for sharing agency declassification guidance.
For classified materials in the Presidential Library system for which we have no delegated declassification authority, we have established a partnership with the Central Intelligence Agency (CIA) called the Remote Archives Capture project (RAC). The RAC project prepares and optically scans all classified twenty-five year old documents that cannot be systematically reviewed by the Presidential Libraries. The purpose of this program is to put all classified Presidential materials in a digital format which can then be transferred back to Washington, D.C. Once in Washington, the digital images are made available to the primary classifying agency for review and declassification of their equities. The equity declassification review is transmitted to a CIA center, which then returns the declassification decisions to the Library.

Meeting the requirements of Executive Order 13526 will be a significant challenge at the Reagan Library, where we will need to refer approximately 8 million pages of textual classified Presidential records prior to 2014. This represents more classified pages than all of the previous Presidential Libraries combined. In addition to scanning the Presidential records of the Reagan administration, the RAC project will need to scan approximately 500,000 pages of classified Vice Presidential records at the George H.W. Bush Library prior to 2014.

**Key external factors** National security concerns may divert resources from declassification efforts or lead to the withholding of additional records.

The Kyl and Lott Amendments require the re-review, page-by-page, of all declassified records except those determined to be highly unlikely to contain Restricted Data and Formerly Restricted Data. We continue to devote resources to assist the Department of Energy (DOE) in surveying and auditing records to ensure that no Restricted Data and Formerly Restricted Data are inadvertently released. Our work in this increased in FY 2003 as the U.S. Air Force began a project similar to DOE’s that will result in another layer of review before the records can be made available.

Special declassification projects also reduce the amount of declassification that can be accomplished with existing resources. Instead of examining entire records series for declassification, many of our declassification staff are required to examine individual withdrawn classified documents to determine their relevance and coordinate their declassification with the appropriate agencies.

The CIA must continue to provide technical support to enable the review of documents by other agencies. Agencies must conduct reviews of their equities in the scanned documents before the libraries can process the records for release.

**Milestones**

**FY 2005**
- 50 percent of the FY 2004 baseline of NARA archival holdings of classified records 25-years-old or older are declassified, properly exempted, appropriately referred, or appropriately delayed.

**FY 2007**
- National Declassification Initiative implemented and 2,000 cubic feet of classified holdings processed.

**FY 2008**
- Quality assurance process for 3,072 cubic feet of records completed and made available for the Interagency Referral Center.
- The National Declassification Initiative implemented.

**FY 2010 Estimated**
- The National Declassification Center established by Executive Order 13526.

**Data source** Performance Measurement and Reporting System and quarterly performance reports to the Archivist.

**Definitions**
- **Equity-holding agency**: the agency that may have classified information in a document, whether or not it created the document. Without declassification guidelines, only the equity-holding agency can declassify information in the document.

**Long Range Performance Target 2.5**

**By 2016, 100 percent of NARA’s archival holdings are stored in appropriate space.**

**FY 10 Estimated Performance**
- Complete 50 percent of site work for first phase of Roosevelt Library renovation.
- Complete design for second phase of Roosevelt Library renovation.
- Update comprehensive space study for Johnson Library renovation.
- Complete construction of Nixon Library expansion.

**Outcome** Archival records are preserved for public use.

**Significance** Providing appropriate physical and environmental storage conditions are the most cost-effective means to ensure records preservation. We greatly increase the chances of records being available for use by Federal officials and the public for as long as needed.

**Means and Strategies** NARA has an inventory of 16 NARA-owned buildings—the National Archives Building, the National Archives at College Park, 13 Presidential Libraries and Museums and the Southeast Regional Archives outside of Atlanta. The National Archives Building and the Roosevelt Library are on
the National Register of Historic Places, and all of the Presidential Libraries are considered by the State Historic Preservation Officers to be eligible. All of these buildings are archival storage facilities and house historically valuable and irreplaceable documents. Literally hundreds of thousands of visitors go to these facilities to do research, to participate in conferences, and for learning and education opportunities. Maintaining these buildings to meet archival storage requirements, to keep their interiors and exteriors in a proper state of repair, as well as to make them safe and efficient buildings for use by researchers and visitors, is demanding not only in staff resources but also in operating and repair funds.

NARA’s Capital Improvements Plan enables us to program for future major renovations so that the necessary repairs are performed in a programmed manner to ensure continued operations at the facilities. The Capital Improvements Plan is a prioritization of potential building needs.

Our state-of-the-art facility in College Park, Maryland, the renovated National Archives Building in Washington, DC, and the archives facility in Atlanta provide appropriate storage conditions for the archival headquarters records of most Federal agencies. However, many of our other facilities require environmental and storage improvements. Several of our regional facilities have severe quality problems, including backlogs of needed repairs and renovations and, in some cases, removal of records from their current location to better space is required. Existing Presidential Libraries need upgrades in environmental conditions and several need additional storage space.

We have upgraded several of our regional archives to meet archival storage requirements. In FY 2008, we developed designs and committed funds for HVAC upgrades at our archives in Waltham, MA; San Bruno, CA; and Seattle, WA. Work on these projects began in FY 2009 and will continue into FY 2010. Also in FY 2010, we will be moving archival operations and records storage out of non-compliant space in Laguna Niguel, CA, and into appropriate space in the records center facility in Riverside, CA.

The National Personnel Records Center (NPRC), the largest NARA operation outside the Washington, DC, area with over 4 million cubic feet of records, needs to replace current facilities that do not meet our storage standards for temporary and archival records. The National Personnel Records Center (i.e. both Military Personnel Record and Civilian Personnel Records), and the Dielman Archival Annex contain numerous facility problems and cannot be made to meet storage standards in a cost effective manner. The problems include inadequate temperature and humidity controls and particulate and gaseous filtration, and antiquated designs that are not conducive to efficient storage or retrieval of records. The existing facilities are being replaced with two new facilities designed to meet the records’ particular storage requirements. The new facility for temporary records, the National Personnel Records Center Annex, was completed in FY 2009. NARA is working with GSA on a new leased facility to house NPRC’s archival and permanent holdings. The new facility will be located in St. Louis’ County.

Creation of the Federally-operated Richard M. Nixon Presidential Library allowed us to advance public access to materials of the highest historical significance, streamline existing archival and museum activities by combining operations in one location, and preserve these invaluable historical resources in appropriate and secure space. The Library completed a renovation project of the existing Nixon Library in Yorba Linda, CA, in FY 2007. We began transferring Nixon Presidential holdings to that facility from two of our facilities; however, inadequate storage space calls for an additional expansion to hold all the materials stored in other archival space. The expansion will be completed in FY 2010. At that time, textual and some non-textual holdings currently stored in College Park, MD, and any remaining materials stored at the regional archives in Laguna Beach, CA, will be moved to the new facility. This will be completed by the end of FY 2010.
The renovation of the aging Franklin D. Roosevelt Library will provide environmentally appropriate, safe and secure space for the long-term care of archival and artifact collections. The renovation will also improve conditions for the staff, researchers, and visitors and help maximize productivity and enjoyment of the facility as a place for work and research. In FY 2009, NARA began phase 1 activities for the project. In FY 2010 NARA will begin general site work to support new mechanical and electrical equipment. NARA will also begin renovating holdings storage rooms and the research room to enhance security and productivity.

**Key external factors** Public, White House, and Congressional support for our space planning activities is vital to develop and implement proposed plans.

**Milestones**

**FY 2005**
- Renovation of the National Archives Building completed.
- Clinton Presidential Library opened.
- Construction of the Southeast Regional Archives completed.
- Move plan for military personnel records in St. Louis completed.

**FY 2006**
- Physical access control system at the National Archives at College Park upgraded.
- Alternatives for location of a new Southwest Regional Archives facility studied.
- Alternatives for location of a new Central Plains Regional Archives facility studied.
- Specific holdings within NARA to be transferred to the new National Personnel Records Center identified.
- Nixon artifact holdings from Laguna Niguel, California, transferred to Nixon Library in Yorba Linda, California.

**FY 2007**
- Location for a new National Personnel Records Center determined.
- Staging plan for moving military personnel records to the new National Personnel Records Center developed.
- Certification and acceptance of Nixon Presidential Library completed.

**FY 2008**
- Portion of move of Nixon artifact holdings from College Park to Nixon Library completed.
- Plan for upgrades to the Regional Archives in Chicago, Seattle and San Bruno finalized.
- Construction contract for mechanical improvements at the Carter Library awarded.
- Construction contract for Nixon Library expansion awarded.

**FY 2009**
- Design for phase I of Roosevelt Library renovation completed.
- Site work contract for Kennedy Library expansion completed.
- Sprinkler upgrades completed and construction contract for mechanical improvements at
Eisenhower Library awarded.
- Construction contract for Carter Library awarded and mechanical improvements completed.
- Design of 1571 improvements for Waltham, San Bruno, and Seattle completed.

**FY 2010 Estimated**
- National Archives Building flood prevention measures completed.
- Portion of site work for first phase of Roosevelt Library renovation completed.
- Design for phase II of Roosevelt Library renovation completed.
- Mechanical improvements for Eisenhower Center completed.
- Construction for Nixon Library expansion completed.
- Ground breaking for new National Personnel Records Center facility completed.
- Design of 1571 improvements for Chicago and Seattle completed.
- Construction of 1571 improvements for Waltham completed.
- Design for archival storage space at Philadelphia FRC completed,

**Data source** Performance Measurement and Reporting System and quarterly performance reports to the Archivist.

**Definitions**
- **Appropriate space**: storage areas that meet physical and environmental standards for the type of materials stored there.
- **Accession**: archival materials transferred to the legal custody of NARA.

---

**Long Range Performance Target 2.6**

**By 2014, 100 percent of NARA records center holdings are stored in appropriate space.**

**FY 10 Estimated Performance**
- Move remaining holdings into National Personnel Records Center Annex.

**Outcome** Agency records are preserved for as long as needed.

**Significance** Providing appropriate physical and environmental storage conditions is the most cost-effective means to ensure records preservation. By doing so, we greatly increase the chances of records being available for use by Federal officials and the public for as long as needed.

**Means and Strategies** We issued revised facility standards to safeguard Federal records in records centers and other records storage facilities. These standards help ensure Federal records are protected whether they are stored by NARA, another Federal agency, or the private sector.

We assist other Federal agencies to bring their facilities under regulatory storage compliance with advice and, if necessary, by inspecting the storage facilities. Examples include Department of Veteran’s Affairs, Department of Energy, U.S. Customs and Border Protection, Central Intelligence Agency, Library of Congress, and the Copyright Office.

NARA’s system of records centers is supplemented by centers operated by other Federal agencies and private interests. Federal agencies’ certify that the storage facilities they plan to use are in compliance with the Facility Standards for Records Storage Facilities (36 CFR 1234). The standards were initially issued in 1999 and revised in September 2005. The new standards place more stringent compliance requirements on existing facilities and will go into effect on October 1, 2009. In an effort to assist agencies, we have participated in NARA-sponsored Records Administration Conference (RACO) to communicate information about compliance. In addition, we issued a Records Storage Facility Standards Toolkit, available both in hard copy and on the web. This toolkit provides agencies with the information needed by Records Officers to verify that a facility meets the required storage standards.
We have also made extensive efforts to upgrade and, if necessary, replace our inventory of records center storage facilities. We have leased four new storage facilities to replace aging ones. The most recent lease is for the new underground facility in Valmeyer, Illinois for the storage of temporary records from the Civilian Personnel Records facility and the Military Personnel Records facility in St. Louis. We are working on a lease to replace our Denver records center and for each records center not already certified or scheduled for replacement, we have renovation efforts underway to bring facilities into compliance.

In FY 2010 we will continue to monitor agency certification for records center compliance with 36 CFR 1234 and ensure that our complete inventory of records center holdings are stored in compliant space.

Key external factors Agencies may choose to store records in facilities not controlled by NARA.

Milestones

FY 2005
- Birmingham, AL Annex closed.
- Palmetto, GA Annex closed.
- Fort Worth Building 5 Annex closed.
- Denver, CO Annex closed.
- Energy Saving Operating Plan for the Washington National Records Center developed with GSA.
- Lease agreement to construct a records center storage facility in Fort Worth completed.

FY 2006
- Move into new records center facility in Atlanta completed.
- East Point records center closed.
- Move into new records center facility in Riverside, CA, completed.

FY 2007
- Construction of new records center facility in Fort Worth completed.
- 1 million cubic feet moved into new records center facility in Fort Worth.
- 75 percent of the move from Bannister Road to Kansas City completed.

FY 2008
- Move out of Bannister Road records center in Kansas City completed.
- New records center facility in Fort Worth, Texas, certified.
- Two records center facilities storage standards certified.
- Lease agreement to construct a National Personnel Records Center Annex for temporary records completed.

FY 2009
- Two records center facilities storage standards certified.
- Construction of National Personnel Records Center Annex completed.
- Move of more than 80 percent of holdings slated for National Personnel Records Center Annex completed.
FY 2010 Estimated

- Move of remaining holdings slated for National Personnel Records Center Annex completed.
- Lease agreement to construct a records center storage facility in Denver completed.
- Measurement methodology revised to track cubic feet of holdings.

Data source Quarterly performance reports to the Archivist.

Definitions

Appropriate space: storage areas that meet physical and environmental standards for the type of materials stored there.

Long Range Performance Target 2.7

By 2016, less than 50 percent of archival holdings require preservation action.

FY 10 Estimated Performance

- Appropriately treat and remove 85,000 cubic feet of NARA’s at-risk archival holdings from preservation backlog.
- Deploy Holdings Management System (HMS) at National Archives Building in Washington, DC, and in two regional archives.

Outcome

Permanent records are preserved for generations to come.

Significance

Providing public access to records for as long as needed requires that we assess the preservation needs of the records, provide storage that retards deterioration, and treat, house, duplicate and/or reformat records at risk of not being preserved.

Means and Strategies

NARA’s mission focuses on preserving and providing access to the permanent records of the Federal Government today and for future generations. The permanent records include a wide range of materials and subjects documenting the rights and obligations of citizens, most notably, the service of America’s veterans, and documenting the actions of our Government and nation to provide transparency and the foundation of a democratic society. Approximately two-thirds of NARA’s textual and non-textual records are at risk of not being preserved and available for use by future generations. We must address now the needs of a wide variety of formats and media in our holdings—paper records, including maps and designs, audio recordings and videotapes, motion pictures, aerial and still photography, microfilm and other microforms, maps, and artifacts, and gifts to the nation, most significantly in the Presidential Libraries. NARA’s first priority for preservation actions includes dynamic media audio and video records, high use records that require holdings maintenance, brittle, fragile and damaged paper records, fragile artifacts, and acetate and color film requiring cold storage. We take the necessary preservation actions by providing the appropriate storage environment, housing records according to their needs, reformatting fragile records for preservation and use, and performing conservation treatment on damaged records.

To focus on the Federal records with the greatest need for preservation action, NARA is using the recently implemented Holdings Management System (HMS) to document risk, enhance security, and to track actions completed on a record. The HMS will also ultimately provide documentation of space needs and the requirements for preservation actions. In FY 2009, HMS was launched at the National Archives in College Park for textual units. In FY 2010 it will be launched at the National Archives Building in Washington, DC, and two regional archives. The initial implementation includes space management, circulation of records to staff, preservation risk assessment, and work requests for preservation and other
We are in a race against time to preserve a large quantity of significant holdings of America’s audio and visual heritage from the 19th and 20th-century in danger of being lost. Digital work processes and materials have been replacing analog processes, equipment, and materials and NARA has made a significant transition to using digital formats for preservation and access. This transition will continue as more of the analog materials and equipment become obsolete. Digital reformatting also requires more active monitoring as technological changes are frequent and rapid. We developed a five-year plan to address preservation, including reformatting, of dynamic media records and other nontextual formats. The digitized and preserved holdings will be migrated to the Electronic Records Archives (ERA) to secure and preserve the records.

The National Personnel Records Center (NPRC) in St. Louis holds 6 billion pages in the records of 57 million military veterans who have served since 1885 in approximately 1.5 million cubic feet of space. Relocating them to a controlled environment is an essential, cost-effective first step in stabilizing their condition. Over the next 60 years, Official Military Personnel Files (OMPFs) will be accessioned to a point where all 1.5 million cubic feet (57 million records) will be opened to the public.

At this time, preservation action on the OMPFs addresses the accessibility and archival storage needs of the oldest, most fragile records, representing slightly more than one percent of the files. A comprehensive physical needs assessment demonstrated that 85 percent of all the OMPFs contain more than 30 types of media and information formats including rapidly deteriorating paper, metal dog tags, hair samples, blood strips, rifle targets, and plastic ID cards and that most of the files already are brittle and have damage from handling, creases, fire, and mold. Access is currently provided by taking the necessary preservation actions and reformatting these records; this work remains a continuing challenge.

In FY 2009, the Official Personnel Folders (OPFs) of civilian Federal government employees dating from the 1850s to 1952 were accessioned into the NPRC; the volume of these series was approximately 200,000 cubic feet. These records will also be moved to the new NPRC facility and will require additional preservation actions.

We continue to work hard to keep pace and to make progress in solving the preservation challenges for the holdings at risk of not being preserved. Nonetheless, as we accession new records, our backlog of at-risk records increases and we are challenged to keep up with the preservation needs of these records.

**Key external factors**  Unusually large increases of new at-risk records, such as the recent accessioning of Official Military Personnel Folders (OMPF) and civilian Official Personnel Folders (OPF), increases in the cost of leasing cold storage space, and growing or shifting public demands for the use of at-risk records could delay achievement of performance objectives. Limitations on the availability of appropriate cold storage facilities and commercial treatment laboratories affect our ability to address the preservation requirements of audiovisual holdings.

### Milestones

**FY 2005**
- Textual preservation study completed.

**FY 2007**
- Capability to measure baseline of archival holdings requiring preservation action created.
- New baseline of archival holdings requiring preservation action established.
- Business process reengineering to examine functional requirements for tracking location, space, circulation, and preservation needs and actions for developing HMS completed.

**FY 2008**
- Digitization equipment and IT support for analog-to-digital transition identified and procured.
- Prototype of HMS developed.

**FY 2009**
- Measures for quantity of dynamic media record holdings that can be preserved digitally established.
- Plan for conversion of dynamic media records holdings to digital format developed.
- Additional storage capacity for digital products reformatted for preservation purposes acquired.
- IOC of HMS deployed in Archives II Textual units and staff trained.

**FY 2010 Estimated**
- Dynamic media records preserved in digital format.
- HMS deployed at Archives I and in two regional archives.
- Reviews of preservation needs at six NARA locations.

### Data source
Performance Measurement and Reporting System and quarterly performance reports to the Archivist.

### Definitions
- **At-risk**: records that require preservation action to retard deterioration and stabilize condition, including storage in the appropriate environment, housing to provide physical and chemical stability, reformatting, and conservation treatment. At risk records are imperiled by physical and chemical damage and inaccessibility due to obsolete technology.
- **Dynamic media**: record holdings in formats including audio, video, and motion picture.
STRATEGIC GOAL 3  WE WILL ADDRESS THE CHALLENGES OF ELECTRONIC RECORDS IN GOVERNMENT TO ENSURE SUCCESS IN FULFILLING NARA’S MISSION IN THE DIGITAL ERA.

**Long Range Performance Targets**

3.1 By 2016, 95 percent of archival electronic holdings have been processed to the point where researchers can have efficient access to them.

3.2 By 2012, 80 percent of archival electronic records are preserved at the planned level of service.

3.3 By 2016, the per-megabyte cost of managing archival electronic records through the Electronic Records Archives (ERA) decreases each year.

**FY 2009 Resources Available to Meet This Goal:** $96,092,000; 103 FTE

**Long Range Performance Target 3.1**  By 2016, 95 percent of archival electronic holdings have been processed to the point where researchers can have efficient access to them.

**FY 10 Estimated Performance**

- Sustain 80 percent of archival electronic holdings processed to the point where researchers can have efficient access to them.

- Complete 80 percent of data migration of holdings from legacy systems migrating to the initial ERA system for Federal records.

**Outcome**  Electronic records of archival value are available promptly for use.

**Significance**  We must guarantee the continuing accessibility of the permanent electronic records of all three branches of our Government. If we cannot do this, citizens, corporations, and the Government will lose the essential documentation necessary to prove their legal rights; the Government will suffer loss of both accountability and credibility; and as a nation our ability to learn about and understand our national experience will be diminished substantially. Moreover, as the business of government shifts more and more to electronic government and reliance on information technology, activities such as collecting taxes, providing veteran's benefits, and protecting our environment will suffer in both efficiency and
effectiveness unless agencies are able to create, maintain, and readily access reliable electronic records and transfer the permanent ones to NARA.

Means and Strategies  The growth in the volume of electronic records is enormous. At the end of the Clinton Administration, the White House transferred several terabytes of electronic records to NARA for storage and preservation. When the Bush Administration ended in January 2009, NARA received approximately 77 terabytes of email, office automation records, digital photographs, and other multi-media electronic formats. Also, during FY 2010, the Census Bureau will transfer electronic images of up to 600 million pages of information, comprising more than 48 terabytes of data from the 2000 Census. Digital Military Personnel Files represent estimated transfers of a billion files over 10 years. We expect even greater growth in transfers of electronic records to NARA as ERA is implemented because past transfers have been constrained by NARA’s limited capacity to process them.

Our ability to promptly process archival electronic records will be enhanced by ERA. While NARA’s existing technical capacity to process electronic records is higher than it has ever been, staffing has declined. Technical processing still lags behind what we anticipate agencies will be sending to NARA over the next several years. NARA’s existing systems and staff are able to copy about one terabyte of data per year. In FY 2008, after successfully implementing the initial operating capability of ERA, we successfully began the process of migrating accessions from our existing holdings into ERA. In FY 2009, we significantly surpassed the number of accessions migrated into ERA in FY 2008. We will run dual operations—both ERA and our legacy systems—as we continue to migrate data to ERA in FY 2010.

Key external factors Progress in processing Presidential electronic records may be hindered by an unusually large number of special access requests or PRA/FOIA requests and the need to review records page by page.

Milestones

FY 2005
- New technologies to support copying and verifying the electronic records in the six transfer formats purchased.

FY 2006
- New technologies to support copying and verifying the electronic records in the six transfer formats implemented.

FY 2007
- Data cleanup and data migration planning from legacy systems migrating to the initial ERA system completed.

FY 2008
- Legacy data migration testing and data cleanup completed.
- Data migration of electronic records on legacy media for transfer to ERA initiated.
FY 2009

• Capability for ERA pilot users to perform basic records management functions and transfer records into ERA completed.

Data source The Performance Measurement and Reporting System and quarterly performance reports to the Archivist.

<table>
<thead>
<tr>
<th>Long Range Performance Target 3.2</th>
<th>By 2012, 80 percent of archival electronic records are preserved at the planned level of service.</th>
</tr>
</thead>
</table>

FY 10 Estimated Performance

• Define criteria and policy for establishing planned levels of service to preserve and manage available archival electronic records.

Outcome Electronic records of archival value are effectively preserved for future generations.

Significance We must guarantee the continuing accessibility of the electronic records of all three branches of our Government. If we cannot do this, citizens, corporations, and the Government will lose the essential evidence necessary to document their legal rights; the Government will suffer loss of both accountability and credibility; and as a nation our ability to learn about and understand our national experience will be diminished substantially. There will be a loss in both efficiency and effectiveness unless agencies are able to create, maintain, and readily access reliable electronic records.

Means and Strategies In the long term, ERA will allow the National Archives to preserve and maintain at the planned level of service any electronic records series. The ERA system will enable NARA and the Presidential Libraries to preserve permanent holdings to maximize the number of records available to researchers. We will preserve and maintain permanent electronic records in any format and transform these records to the most appropriate format needed, or to a persistent format or state when possible. This work will be carried out based on the technological characteristics of the records, expected customer demands or interests, the needs of the records’ originators, the laws and regulations requirement differing levels of control, and NARA’s business strategies and priorities.

To prepare for these capabilities, in FY 2010, we will define the criteria and policy for establishing planned levels of service for archival electronic records.

Key external factors The results of existing and future research and development into electronic records preservation may change the requirements for an electronic records preservation system.

Milestones
FY 2005 • Criteria for levels of service for archival electronic records established.
FY 2006 • Lifecycle management plans for select electronic records developed using criteria established for levels of service piloted.
FY 2007 • Lifecycle management plan pilot for select electronic records using criteria established for levels of service developed.
FY 2008 • Draft methodology for capability to measure preservation of electronic records in a persistent format developed.
FY 2010 Estimated • Criteria and policy for establishing planned levels of service to preserve and make available archival electronic records defined.

Data source The Performance Measurement and Reporting System and quarterly performance reports to the Archivist.

Definitions
Preservation media – Media on which permanent electronic records are stored. Preservation media includes 3480-Class magnetic tape cartridges, Digital Linear Tape, and Electronic Records Archives disk storage.

Long Range Performance Target 3.3 By 2016, the per-megabyte cost of managing archival electronic records through the Electronic Records Archives will continue to decrease each year.

FY 10 Estimated Performance • Deploy preservation framework design, as well as prototypes for specific formats.
• Deploy online public access functions for ERA system.
• Expand ERA pilot to at least 20 and up to 29 Federal agencies.
• Deploy a Congressional instance of ERA.

Outcome Electronic records of archival value are economically preserved.

Significance We must guarantee the continuing accessibility of the electronic records of all three branches of our Government. If we cannot do this, citizens, corporations, and the Government will lose the essential records necessary to document their legal rights; the Government will suffer loss of both accountability and credibility; and as a nation our ability to learn about and understand our national experience will be diminished substantially. There will be a loss in both efficiency and effectiveness unless agencies are able to create, maintain, and readily access reliable electronic records.

Means and Strategies Through the Electronic Records Archives (ERA), we are creating a digital National Archives that will enable NARA and other Federal agencies to maintain electronic records as long as needed to meet legal, business, and archival requirements.

The ERA system addresses a fundamental requirement of electronic government: to be able to keep and transmit reliable and authentic electronic records independently of time, place, the vagaries of the market place, the state of the art of information technology, or the peculiarities of proprietary formats or stove-piped applications. NARA is developing a comprehensive, systematic, and dynamic means for preserving electronic records, free from dependence on any specific hardware or software. More importantly, ERA
will help citizens find records they want and make it easy for NARA to deliver those records in formats suited to citizens’ needs.

ERA will include nearly all of NARA's processes for lifecycle management of records; therefore, it will be the catalyst for conversion to the target architecture from the legacy applications NARA currently uses to support these processes. This conversion will include process improvement as well as reengineering the architecture of these applications.

We also will continue collaborative research into issues related to the lifecycle management of electronic records that are beyond state-of-the-art information technology or state-of-the-science computer, information, or archival sciences. Research and exploratory development activities are well aligned with the work of the Interagency Working Group on Information Technology’s Research and Development program and the President’s Management Council’s vision of Government-wide electronic records management in support of e-Government. Specific direction to agencies encourages research to enable preservation and utility of electronic information archives and creation of digital archives of core knowledge for research and learning, as well as being able to produce, collect, store, communicate, and share high amounts of electronic information. We will continue to rely to a large extent on established R&D management capabilities in partner agencies.

NARA has laid out an incremental acquisition strategy for ERA that will enable us to ensure that significant milestones are achieved before commitments are made for subsequent work. In FY 2008, we achieved initial operating capability. The initial system supported the transfer of electronic records to the National Archives both electronically and on digital media, and automated the verification of basic characteristics of transferred electronic records. This system also stores and enables output of electronic records in the formats received.

ERA operates from a primary site in West Virginia and uses a backup site in Maryland for media storage. The primary site provides for the transfer, verification, and storage of unclassified and Sensitive But Unclassified (SBU) records from NARA’s existing holdings. As initial external users, four Federal agencies (Bureau of Labor Statistics, National Nuclear Security Administration, Naval Oceanographic Office, and the Patent and Trademark Office) can also transfer new accessions of electronic records to ERA. Until use is expanded to other agencies, NARA staff act as proxies for them in entering new records schedules, transfer plans and transfer requests for all types of records, and for transfer of electronic records.

We developed a separate instance of ERA and, in FY 2009, deployed capabilities that enabled us to ingest and store electronic records of the Executive Office of the President (EOP) transferred to NARA at the end of the George W. Bush Administration. The EOP ERA instance will provide the search and retrieval capabilities needed to make these electronic records available in response to special access requests.

During FY 2009, NARA began the design work for developing public access and preservation functions. We also enhanced the infrastructure and architecture of ERA to extend capability to accept more formats and open the system to agencies beyond those in the pilot.

In FY 2010, ERA will deploy preservation framework design based on work in FY 2009. We will deploy public access functions and develop capabilities for managing restricted information in the electronic records with ERA (e.g. privacy, national security, Freedom of Information Act exemptions). In addition, NARA will make incremental improvements in existing capabilities. We will also transition from offline to online backup and restore services.
Key external factors  The results of existing and future research and development into electronic records preservation may change the requirements and costs for an electronic records preservation system.

Milestones

FY 2005
- System requirements with competing vendors reviewed.
- System Design Review with competing vendors conducted.
- System Analysis and Design completed.
- ERA domain model completed.
- Development contractor for the ERA system selected.

FY 2006
- Software requirements for the initial system for Federal records specified.
- Preliminary Design Review for the initial ERA system for Federal records completed.
- Critical Design Review for the initial ERA system for Federal records completed.

FY 2007
- Infrastructure for the ERA system for Federal records deployed.
- First pilot of the ERA system for Federal records delivered.
- Prototype of capabilities required for Presidential electronic records constructed.

FY 2008
- Initial operating capability of the ERA system for Federal records achieved.
- Data ingestion from legacy systems and four Federal agencies begun.
- Pilot for the ERA system for Presidential electronic records completed.
- Sample data ingested into the pilot Presidential system.

FY 2009
- Initial operating capability of the systems for Presidential electronic records achieved.
- Requirements for public access and long-term preservation developed.
- ERA infrastructure and architecture enhanced.

FY 2010 Estimated
- System capacity increased to accommodate extension of system to additional agencies.
- Backup system to restore ERA infrastructure in case of system failure procured and deployed.
- Limited public access functionality and preservation framework tools deployed.

Data source  The Performance Measurement and Reporting System and quarterly performance reports to the Archivist.

Definitions  Preserved: (1) the physical file containing one or more logical data records has been identified and its location, format, and internal structure(s) specified; (2) logical data records within the file are physically readable and retrievable; (3) the media, the physical files written on them, and the logical data records they contain are managed to ensure continuing accessibility; and (4) an audit trail is maintained to document record integrity. Logical data record: a set of data processed as a unit by a computer system or application independently of its physical environment. Examples: a word processing document; a spreadsheet; an e-mail message; each row in each table of a relational database or each row in an independent logical file database. Megabyte: a megabyte is a measure of computer data storage capacity. A megabyte is 2 to the 20th power, or 1,048,576 bytes in decimal notation.
STRATEGIC GOAL 4  WE WILL PROVIDE PROMPT, EASY, AND SECURE ACCESS TO OUR HOLDINGS ANYWHERE, ANYTIME

Long Range Performance Targets

4.1 By 2016, NARA customer service standards for researchers are met or exceeded.

4.2 By 2012, 1 percent of archival holdings are available online.

4.3 By 2016, 95 percent of archival holdings are described at the series level in an online catalog.

4.4 By 2012, our web sites score at or above the benchmark for excellence as defined for Federal government web sites.

FY 2010 Resources Requested to Meet This Goal: $54,811,000; 305 FTE

Long Range Performance Target 4.1  By 2016, NARA customer service standards for researchers are met or exceeded.

FY 10 Estimated Performance

- Meet or exceed NARA’s published standards for access to records and services and customer satisfaction levels:
  - 93 percent of written archival requests are answered within 10 working days;
  - 94 percent of items requested in our research rooms are furnished within 1 hour of request or scheduled pull time;
  - 87 percent of Freedom of Information Act requests for Federal records are answered within 20 working days;
  - 90 percent of online archival fixed-fee reproduction orders are completed in 20 working days or less

- Operate Office of Government Information Services to strengthen FOIA and ensure an open and accessible government.
**Outcome**  Our customers are satisfied with NARA’s service.

**Significance**  Our customers deserve the best service we can deliver. Through the measurement of performance against customer service standards, development of customer service teams and customer service training, customer surveys, and process redesign efforts in areas that traditionally had high backlogs, we are coordinating our efforts to ensure that our customer service meets our customers’ needs.

**Means and Strategies**  Serving our customers is one of our primary areas of focus, and we are continually making process improvements in our research rooms, training staff in customer service principles, employing customer service teams, modernizing and upgrading research room equipment, adding research room staff, and adjusting hours of service to make it easier for more people to use our services. We also added public computer terminals with Internet access in all our research rooms nationwide.

Our research facilities at the National Archives Building in Washington, D.C., consolidate in one convenient location access to preeminent genealogy resources in the Washington area. Thousands of genealogists come to the National Archives Building in Washington to use our original records, microfilm copies, and online resources. Our Genealogy Consultation Room provides customers with highly knowledgeable staff and volunteers to help develop research strategies and use finding aids. Our online orientation presentation for customers also helps them get started on the road to their family history.

NARA has established partnerships nationwide and is exploring new partnership opportunities that would digitize many of our holdings (see related target 4.2), thereby greatly increasing public access to these records. These partnerships will help us find cost-effective and efficient ways to bring high-interest and representative documents to our users over the Internet. We also strive to provide timely Internet access to high-interest documents such as 9/11 Commission records and materials relating to nominees for appointment to key government positions and the Supreme Court.

The Open Government Act of 2007 amended the Freedom of Information Act (5 U.S.C. 552) to create an Office of Government Information Services (OGIS) within NARA. This act expands NARA’s responsibilities from administering and responding to FOIA requests directed to NARA to an office also responsible for improving the administration of FOIA in the Federal government. Our responsibilities include reviewing the policies and procedures of administrative agencies under FOIA to strengthen FOIA and ensure transparency of Government information to the public, and offering mediation services to resolve disputes between FOIA requesters and agencies as a non-exclusive alternative to litigation. In FY 2010 we will implement the OGIS, work with the agencies under FOIA, and seek input from private sector stakeholders to assist in the implementation of this office.

**Key external factors**  Unexpected increases in records holdings or public interest in groups of records can significantly increase workloads, response times, and wear and tear on public use equipment. NARA cannot control the response time for FOIAs that must be referred to other agencies.

## Milestones

**FY 2006**
- NARA’s published standards for access to records and services exceeded.
- Freedmen’s Bureau records project to microfilm records of 15 states and the District of Columbia completed.

**FY 2007**
- NARA’s published standards for access to records and services exceeded.

**FY 2008**
- NARA’s published standards for access to records and services exceeded.

**FY 2009**
- NARA’s published standards for access to records and services and customer satisfaction levels exceeded.

**FY 2010 Estimated**
- Office of Government Information Services operational.

## Data source
Performance Measurement and Reporting System and quarterly performance reports to the Archivist. Request price for military service separation agreements from FY 2009 Records Center Program Rate Schedule, which is provided annually to agencies in an attachment to their interagency agreement.

## Definitions
**Written requests**: requests for services that arrive in the form of letters, faxes, e-mails, and telephone calls that have been transcribed. Excludes Freedom of Information Act requests, personnel information requests at the National Personnel Records Center, Federal agency requests for information, fulfillment of requests for copies of records, requests for museum shop products, subpoenas, and special access requests.
Long Range Performance Target 4.2     By 2012, 1 percent of archival holdings are available online.

FY 10 Estimated Performance

- Meet 30 percent of the 2012 target for archival holdings accessible online.
- Complete digitization of 1940 Census.

Outcome     Archival materials are available online for public use.

Significance We must guarantee the continuing accessibility of the records of all three branches of all three branches of our Government. If we cannot do this, citizens, corporations, and the Government will lose the essential evidence necessary to document their legal rights; the Government will suffer loss of both accountability and credibility; and as a nation our ability to learn about and understand our national experience will be diminished substantially.

Means and Strategies To increase the amount of archival material that we make available online, we are engaging in four major strategies:

- Gathering existing digital copies of traditional archival material and make them available online;
- Engaging in partnerships to digitize selections of traditional archival material;
- Exploring innovative NARA-led projects for digitizing archival material that will also allow us to develop our internal capacity in this area; and
- Making electronic records, which are “born digital,” available online, as appropriate.

First, we plan to identify and publish online material that has already been digitized by NARA, but for one reason or another is not available online. For example, NARA has digitized a large number of high interest documents for exhibits; these materials could be described and placed online. A NARA-wide project to locate, inventory these digitized copies, and assess the level of effort required was initiated in FY 2007, and we are making some of these copies available online as they are described in our online catalog.

Second, we continue to explore a variety of new partnership opportunities that would digitize many of our holdings, thereby greatly increasing public access to these records. These partnerships will help us find cost-effective and efficient ways to bring high-interest and representative documents to our users over the Internet. NARA seeks to partner with organizations from a variety of sectors (private, public, non-profit, educational, government) to digitize and make available traditional holdings. NARA currently is working with several partners and , to date, more than 60 million records are available online through our partners.

Third, we continue to explore innovative ways to increase our own capacity to digitize selections of our holdings. We will look for sources of funding and support for specific high-interest projects. We will strive to provide timely Internet access to high-interest documents. For example, we are preparing for the opening of the 1940 Census records on April 1, 2012. Since 1790, the Federal government has collected census information on its residents every ten years. Under a special agreement between the Archivist of the United States and the Director of the Bureau of the Census, census information on individuals is released to the public 72 years after it is collected. Although the records are on more than 4,600 rolls of 35 mm microfilm, we will completed the digitization of the entire 1940 Census in FY 2010 and make them digitally available in 2012. In addition,, we will establish a partnership to produce a name index of the Census, although this will not be done prior to the official opening of the records.
Fourth, we maintain our Access to Archival Databases (AAD) system which makes select “born digital”
database records available online. To meet an immediate need to provide online access to high-volume
and high-demand electronic records from the Department of State and other agencies, NARA launched the
AAD system in 2003. We are continuing to increase the number of records available to the public through
this tool, though the series appropriate for this type of access will always be limited. This function will
eventually be provided by ERA.

Key external factors We intend to accomplish much of this goal through partnerships with other
organizations that want to publish our holdings on their web sites.

Milestones

FY 2005
- Snapshots of Federal Government web sites taken.
- Results of online survey to improve customer usability of Access to Archival Databases system identified.
- Digital photographs from FEMA added to AAD.
- AAD’s customer satisfaction improved to a score of 55 on customer survey tool.

FY 2006
- Percent of electronic records in AAD increased by 13 percent.
- User interface improvements launched.
- AAD’s customer satisfaction improved to a score of 65 on customer survey tool.

FY 2007
- Working group to explore strategies for NARA-led digitizing projects chartered.
- Digitization partnership principles and a digitization plan for making available archival holdings online developed.
- Number of digital copies available online through the Archival Research Catalog (ARC) increased by 10 percent.
- Digitization partnership principles and planning developed.
- Inventory of existing digital copies of archival materials completed.

FY 2008
- Measurement methodology for number of archival holdings accessible online developed.
- More than 18,000 existing digital copies harvested and added to the Archival Research Catalog (ARC).
- Agency business requirements for digital storage needs identified.
- RFI to explore Census partnership potential published.

FY 2009
- ARC upload tool for uploading descriptions with digital objects enhanced.
- Working group to explore strategies for NARA-led digitizing of 1940 Census records chartered.
FY 2010

- New description tool to provide access to millions of item descriptions with links to digital partners under development.
- Digitization of 1940 Census completed.
- NARA partnership to produce name index of the Census established.
- Suite of 1940 Census products identified and evaluated.

Data source The Performance Measurement and Reporting System and quarterly performance reports to the Archivist.

Long Range Performance Target 4.3  
By 2016, 95 percent of NARA archival holdings are described in an online catalog.

Outcome Researchers find the descriptive information they need about NARA archival holdings in one convenient location.

Significance In a democracy, the records of its archives belong to its citizens. NARA is committed to ensuring that citizens anywhere, anytime can gain access to information about and from the records of our Government. A key strategy to fulfilling that commitment is the development and deployment of the Archival Research Catalog (ARC). Eventually, the functionality and data in ARC will be incorporated in the Electronic Records Archives.

Means and Strategies When fully populated, ARC will be a comprehensive, self-service, online "card catalog" of descriptions of our nationwide holdings. Previously, to locate records you wanted to see or copy, you had to search through various published and unpublished catalogs, indexes, and lists, many of which were out of date, out of print, or available in one location only. ARC will ensure that anyone, anywhere with an Internet connection can browse descriptions of all of our holdings, including electronic records, in our Washington, DC, area archives, regional archives, and Presidential libraries. ARC also contains links to more than 133,000 digital images of some of our most popular and interesting holdings. The available online historical documents include many of the holdings highlighted in NARA's permanent Public Vaults exhibit.

In developing ARC, we built two systems—a read-only web version of the system for use by staff and the public, and a data entry system in which archivists enter and edit records descriptions. Fully launched in 2004, we have worked steadily since that time to get more descriptions of our holdings in ARC. We began our description effort with describing large series, however, as we move forward, we progressively move to smaller series thereby impacting the number of series being described. Today, ARC contains more than one million descriptions. But with 65 years worth of existing descriptive information to place into ARC, we have a multi-year challenge ahead.
We are undertaking a major effort to put the data from existing finding aids into ARC. This project includes folder and item lists, and a wide variety of indexes. This effort has already yielded hundreds of thousands of additional detailed descriptions in ARC, and has enhanced ARC as a valuable tool for researchers. The redesign of the public face of ARC has provided an improved easier-to-navigate user interface based on customer feedback. We will continue to work toward the description goals as our online catalog moves into ERA.

### Milestones

**FY 2005**
- ARC rollout to all archival units nationwide 100 percent complete.

**FY 2006**
- Tools to convert existing finding aids into ARC launched.

**FY 2007**
- Hyperlinks in updated web pages embedded to provide contextual information for users.

**FY 2008**
- Redesigned ARC web system launched.

**FY 2010**
- Work required to subsume ARC web into ERA conducted.

### Data source
Performance Measurement and Reporting System and quarterly performance reports to the Archivist.

### Definitions

**Visits:** An online "visit" is analogous to a physical visit to one of our facilities. If someone is continuously active on our site, we count all his retrievals as one visit. If he is inactive for more than 30 minutes, we assume that he has left the building, as it were. If he later requests another page—whether the same day or another day—we count that as a new visit. We exclude visits by “bots,” which are not real people but merely agents harvesting data about web sites on behalf of search engines.

**Use:** A query through the AAD or ARC search engine, or a retrieval of the start page, excluding retrievals by “bots.”

**Traditional holdings:** books, papers, maps, photographs, motion pictures, sound and video recordings and other documentary material that is not stored on electronic media.

**Artifact holdings:** objects whose archival value lies in the things themselves rather than in any information recorded upon them.

**Electronic holdings:** records on electronic storage media.
Long Range Performance Target 4.4  By 2012, our web sites score at or above the benchmark for excellence as defined for Federal government web sites.

FY 10 Estimated Performance

- Improve NARA’s score against the benchmark for excellence by 3 percent.
- Redesign archives.gov web site.

Outcome  More people, nationwide and worldwide, have easy access to NARA services.

Significance  For citizens and the Government to take full advantage of the resources we have to offer, we must make those services available as widely as possible. With the advent of the Internet and other electronic forms of communication, we have the means to offer services remotely. Visiting or writing one of our facilities is no longer the only way for people to get ready access to essential evidence. By broadening the availability of our services, we ensure that citizens everywhere have access to their National Archives.

Means and Strategies  The National Archives reaches millions of people each year through its web presence, consisting of archives.gov, Presidential Library web sites, and web sites supporting unique initiatives, such as OurDocuments.gov.

These sites are the most widely available means of electronic access to our services and information, including directions on how to contact us and do research at our facilities located nationwide; descriptions of our holdings; direct access to certain archival electronic records; digital copies of selected archival materials; electronic mailboxes for customer questions, comments, and complaints; electronic versions of Federal Register publications; online exhibits; and classroom resources for students and teachers.

In accordance with the President's Management Agenda, which aims to expand electronic government NARA has aggressively looked for opportunities to make more of our services, for both Federal agencies and the public, available electronically. To meet this challenge and the requirements of the Government Paperwork Elimination Act (GPEA), however, we must be able to support a wide variety of complex electronic transactions.

Our web sites assist the public in navigating our services from their homes and offices; visiting virtually the National Archives, Presidential Libraries, Regional Archives, and the Charters of Freedom (the Declaration of Independence, Constitution, and Bill of Rights); and using resources available in our facilities nationwide. The sites also provide information about the varied and numerous public programs offered at all of NARA's locations, including those in the Regional Archives and the Presidential Libraries, as well as components of the National Archives Experience in Washington, DC, such as the William G. McGowan Theater and the Public Vaults permanent exhibit.

We continue to collect public feedback about our sites through our American Customer Satisfaction Index (ACSI) online surveys of our web sites and major application interfaces, such as our Archival Research Catalog (ARC) and Access to Archival Databases (AAD) systems. The ACSI helps us to measure satisfaction by customer group (Genealogists, Veterans, Educators, etc.) which enables us to design strategies to develop, modify, enhance or remove online web content in response to customer feedback about our web sites. Data from ACSI indicates that increased user satisfaction with our site search engine
would impact our overall score. In FY 2008 we implemented several improvements to our search capabilities which resulted in increased user satisfaction according to survey responses. At the end of FY 2009, Foresee Results, an online customer satisfaction measurement company, tested several questions on the ACSI about transparency and trust. They reported that there is a correlation between user perception of web site transparency, their trust of the web site or agency, and their satisfaction with the web site or agency. We will pilot the transparency questions about the archives.gov web site in FY 2010 to understand if a relationship exists and what changes we should consider to influence a more positive experience for our customers. In addition, we plan to evaluate and test new content management systems using our agency internal web site.

In FY 2009, we worked to increase visibility and transparency of our programs and services. We developed a web governance strategy to identify Web 2.0 technologies and social media tools that enhanced NARA’s interactive, collaborative, and participative relationships with Federal agencies, partners and the public. We have successfully implemented a variety of social media projects, including National Archives pages on Flickr and Facebook, a YouTube channel, and a blog. We will add another YouTube channel in FY 2010 to feature videos from our holdings. Additional projects for wikis, and widgets will also be implemented in FY 2010.

The Presidential Libraries consistently outperform the overall ACSI e-Government satisfaction score and other benchmarks. We plan to continue to respond to customer expectations by following this successful model and building upon the success of the collective Presidential Library web sites.

In FY 2008, we chartered an Online Public Access Product Team to define the functionality and design of ERA’s online public access interface. During FY 2009, the team developed requirements for an online public access system with centralized search and a clear display that will allow our customers to search all of our online holdings in one place. In FY 2010, this system will provide access to the holdings from legacy systems that were stovepiped and required separate searches, including ARC and AAD. As we continue to develop the search and user interface, we will federate the search to our holdings available elsewhere on the web. We will also explore the use of social media tools to enhance the public’s experience and interaction with our holdings on the web.

**Milestones**

**FY 2005**

- Online searching to find microfilm available for purchase, viewing, or renting implemented.
- Online ordering of microform products implemented.
- Siebel Order Fulfillment Application (SOFA), replacing the OFAS Workflow System, implemented.
• Capability to submit grant applications online implemented.

FY 2006
• Online ordering of copies of bankruptcy cases, civil cases, criminal cases, and Court of Appeals cases implemented.
• Online ordering of copies of naturalization records implemented.
• Online ordering of World War I draft registration cards implemented.

FY 2007
• Online store for museum merchandise operational.
• Methodology for assessing NARA’s score against the benchmark for excellence as defined for Federal government web sites developed.

FY 2008
• NARA’s baseline score against the benchmark for excellence as defined for Federal government web sites established.
• Inventory of all web-based access capabilities currently provided to our online customers to identify gaps and overlaps completed.

FY 2009
• Projects on three different social media web sites (e.g. You Tube, Flickr, Twitter, Facebook, etc.) piloted.
• Comprehensive and strategic concept of operations for web-based access to our online assets developed.

FY 2010 Estimated
• Archives.gov home page redesigned.
• Additional projects on selected social media web sites implemented.

Data source Performance Measurement and Reporting System and quarterly performance reports to the Archivist.

Definitions Online Visits: An online "visit" is analogous to a physical visit to one of our facilities. If someone is continuously active on our site, we count all his retrievals as one visit. Long Range Performance Target 5.1  By 2016, 90 percent of NARA’s visitors are satisfied with their visit experience.

FY 10 Estimated Performance

- 85 percent of NARA education program visitors are satisfied with their visit experience.
- 85 percent of NARA exhibit visitors are satisfied with their visit experience.
- 85 percent of public program visitors are highly satisfied with their visit experience.
- Implement priorities on recommended improvements identified through FY 2008 AASLH study results.
- Conduct and evaluate a longitudinal study of the Public Vaults and visitor experience to compare to 2005 data.

Outcome  Our public outreach efforts effectively increase access to and knowledge of government in ways that further civic literacy.

Significance  In the promotion of civic literacy, the National Archives has always played a unique and important role. As the keeper of the records of the Government, we have literally safeguarded the
documentary record of American history. This record belongs to the American people. From the Charters of Freedom, to the census records that enumerate our country’s population, to the records of Congress and Presidential Administrations, our holdings are so vast and diverse that the value and amount of information available is not always readily apparent to the public. Furthermore, we manage an important civic process, the Federal Register system. Therefore, we continually educate the public about the treasure trove of information and services we offer to enable access to our holdings and encourage civic participation. Museum programs are an inspiring way for people to understand their own personal connection to the records in the National Archives. Our efforts are intended to help families see how their own stories fit into our national mosaic, and to thrill young people with the real-life drama of the American experience.

Means and Strategies The National Archives Experience, which includes the opening Public Vaults, the McGowan Theater, and O’Brien Traveling Exhibits Gallery, continues to grow in scope and impact. The Public Vaults has helped us make a connection between the average visitor and Federal records, illustrating how such records illuminate our understanding of the events that shaped our nation, our communities and our families. We expanded offerings in the McGowan Theater, including conferences, symposia, film series, and notable free public programs with speakers who have participated in and/or analyzed the events documented in our records. The O’Brien Gallery has featured topical exhibits intended to engage visitors in the stories that define our common heritage, from eyewitness reports of the great events of our times to the school boy experiences of the youngsters who grew up to be President. The new online Digital Vaults exhibit has captured the spirit of our Public Vaults and made inquiry-based learning about NARA records available to millions of people around the globe.

Our Boeing Learning Center provides resources to teachers and parents, allowing them to more effectively use our records to achieve national standards for history and civics. More than one million visitors a year now visit the National Archives Experience, with another 1.8 million visitors to NARA’s Presidential Libraries and Museums, providing the National Archives with an exceptional opportunity to promote lifelong civic learning among people of different ages and backgrounds who come from all parts of the country.

Presidential Libraries and Museums play a vital role in promoting an understanding not only of the Presidency, but also American history and democracy. From Hoover through Clinton, the museums offer thought-provoking and entertaining permanent exhibits that combine documents and artifacts, photographs and film to immerse visitors in the sights and sounds of the past. Each year, Presidential Libraries also host temporary exhibits that supplement and elaborate on themes presented in the permanent exhibitions. These temporary exhibits have examined topics central to civic literacy in America: leadership, citizenship, and our democratic tradition.

Conferences, symposia, and public forums sponsored by the Libraries are another means of educating and informing the public about our shared democratic values. Conferences supported in partnership by all Presidential Libraries allow the public to learn about pivotal historical events from those who experienced the events first-hand. Presidential Libraries have explored ways to develop programs that can be utilized by a variety of audiences. The addition of the Reagan Library’s Discovery Center in 2008 contributed to the growing host of Presidential Libraries’ experiential learning programs. These programs, designed to allow participants to develop decision-making skills and gain a newfound understanding of government roles, are used by students and teacher groups, as well as government and corporate staffs for training. At the Federal Register, we teach a monthly class on the Federal regulatory process and the role of the Federal Register.
We want to gain insight of the degree to which our exhibits and programs have had a meaningful impact on visitors and participants. To increase our understanding, in FY 2008, we obtained OMB approval to use a measurement instrument program offered by the American Association of State and Local History Museums (AASLH). This allowed us to survey customers for feedback on our museum in Washington, DC, but it also provided us with a benchmark comparison with other similar museums. The results showed high levels of overall satisfaction; however, we learned that we could make improvements to the logistics and content in the Rotunda to enhance the experience of our customers. We will implement several changes in FY 2010 and survey our customers again in the summer and fall of FY 2010 to assess the impact of our changes.

**Key external factors** Our success depends on the support of the private foundation that are fundamental to our exhibit programs. To better understand our customers’ interests, we will need to expand our customer survey program. We will need the support of OMB in approving these surveys and our customers in conducting them.

**Milestones**

**FY 2005**
- William J. Clinton presidential Library and Museum opens to the public.

**FY 2007**
- Industry measurement tools for an appropriate benchmark for NARA museums surveyed.
- The Learning Center operational, part of NARA’s National Archives Experience, is operational.
- Richard Nixon Presidential Library and Museum opens to the public.

**FY 2008**
- Draft profile of NARA’s 12 Presidential Libraries developed.
- Comparative data for the National Archives Experience in Washington using the AASLH survey instrument collected.

**FY 2009**
- NARA’s 75th anniversary celebrated.
- Report on NARA’s Presidential Library museum programs issued.
- Data from the AASLH study analyzed.

**FY 2010 Estimated**
- Comparative data for the National Archives Experience in Washington using the AASLH survey instrument collected.
- Longitudinal study of visitor response to Public Vaults and National Archives Experience
• Expand use of social media to increase collaboration, participation, and the growth of online communities.
• Industry measures based on peer review of Presidential Libraries identified.
• Measures for meeting industry standards by 2016 established.

Outcome Our visitors understand their personal connection to the records of their history.

Significance Projects supported by the National Historical Publications Records Commission produce the desired outcomes of the awards through careful development and monitoring of their goals and objectives. Ultimately, these projects support the publication, preservation, and availability of the nation’s vast network of archival materials, thereby facilitating citizen access to our shared documentary heritage.

Means and Strategies The NHPRC, established by Congress in 1934, supports a host of activities to collect, preserve, publish, and promote the use of documentary sources relating to the history of the United States. The NHPRC oversees a highly competitive federal awards program and provides assistance to prospective grantees to cultivate high quality proposals. Projects supported by the NHPRC include digitizing and/or publishing historical records of national significance, tackling electronic records preservation and access issues, making hidden archival collections known and readily available and preparing professionals in the archival and historical publishing communities for the challenges associated with these enterprises.

In FY 2009, we initiated our Founding Fathers Online pilot project, *Transcribing and Encoding the Founders Papers for Online Access*. This activity began in response to a Congressional committee report addressing concerns that the papers of America’s Founding Fathers were not freely available online. The 2009 pilot project tested new approaches to significant portions of the editorial work associated with publishing the Founders’ papers. These new approaches are focused on transcribing the handwritten texts and preparing, or encoding, them for online presentation. The pilot project includes the papers of John Adams, Benjamin Franklin, Thomas Jefferson, James Madison, and George Washington.

In FY 2010, we anticipate that 5,000 verified encoded transcriptions representing portions of the original papers of James Madison and John Adams will be available online for the first time as a result of the Founding Fathers online pilot project. We also anticipate that this project will yield potential new work flows and cost structures to be employed by potential grantees and cooperative agreement partners as we move forward in FY 2010 with preparing both the previously published and the remaining unpublished Founders’ papers for an online environment.

Contingent upon an NHPRC appropriation, the Archivist will issue at least one cooperative agreement in FY 2010 to provide free online access to existing annotated transcriptions of Founding Fathers documents.
**Key external factors**  The NHPRC rigorously evaluates grant applications on the basis of the relevance of projects to NHPRC’s strategic objectives and the ability of applicants to produce promised results. Nonetheless, results ultimately depend on the grantees rather than on NHPRC.

**STRATEGIC GOAL 6  WE WILL EQUIP NARA TO MEET THE CHANGING NEEDS OF OUR CUSTOMERS.**

### Long Range Performance Targets

6.1 By 2016, 95 percent of employees possess the core competencies that were identified for their jobs.

6.2 By 2016, the percentages of NARA employees in underrepresented groups match their respective availability levels in the Civilian Labor Force (CLF).

6.3 By 2016, 60 percent of NARA’s positions are filled within 80 days.

6.4 By 2016, NARA’s telework rate is 100 percent of the Federal Government average rate.

6.5 By 2016, public network applications are available 99 percent of the time.

### FY 2010 Resources Requested to Meet This Goal: $37,682,000; 194 FTE

### Long Range Performance Target 6.1  By 2016, 95 percent of employees possess the core competencies that were identified for their jobs.

### FY 10 Estimated Performance

- Maintain 95 percent of staff development plans linked to strategic outcomes.

- Maintain 95 percent of employee performance plans linked to strategic outcomes.
Identify core competencies for NARA’s mission critical occupations.

**Outcome** The NARA workforce has the skills necessary to deliver the services our customers require.

**Significance** To ensure we can achieve our mission and strategic goals we must ensure that staff have the skills and competencies they need to optimize individual and organizational performance.

**Means and Strategies** Having the internal staff capabilities to carry out the strategies in this Strategic Plan is vital to the success of the plan and the achievement of our mission. To ensure that we have the staff capacity that we need both now and in the future, we are systematically examining NARA’s major occupations to identify competency requirements at all levels. As these competency requirements are identified, we will use them as the basis for recruitment, selection, performance management, training, and development of NARA staff. Specifically, we will use the results of our competency development work to:

- Update our recruitment and selection criteria (to include making increased use of automation and expanding the types of assessments used to hire candidates into NARA positions) to ensure that we are hiring the right people with the right skills for the right jobs at the right time.
- Develop competency-based performance standards that clearly articulate performance expectations and hold staff accountable for achieving results.
- Design training opportunities that will provide staff with the competencies needed to perform their jobs.
- Assess the competencies of existing staff, identify skill gaps, and develop both short- and long-term strategies to bridge those gaps.
- Identify workforce imbalances and anticipate succession or other workforce planning needs.
- Identify and communicate to staff paths for career progression and advancement throughout NARA.

Our initial focus will be on developing core competencies for our mission critical occupations – Archivists in the GS-1420 series and Archives Specialists and Technicians in the GS-1421 series. We will then look to expand our competency development work to other critical and important occupations. In FY 2008 and FY 2009, we successfully piloted our competency development approach across several positions in NARA’s Modern Records Program and in the Information Security Oversight Office (ISOO), and the Federal Records Center Director position in our Office of Regional Records Services. We also developed a competency based assessment for this latter position. The results and lessons learned from this pilot project will be applied to future competency development efforts across other mission critical occupations in the years to come.

We have also made significant progress toward creating an agency-wide leadership competency model. During FY 2008, NARA’s Office of Records Services, Washington DC validated a leadership competency model that is now being used as the foundation for several management development activities across the office, including a formal competitive management development program for high-potential “emerging” managers. We expanded this leadership competency model to all NARA leadership positions during FY 2009 and will continue with these efforts in FY 2010. We are currently working with our Access Programs office and also developing a physical ability test for the records centers. In addition, we are exploring options for implementing a writing sample assessment to be used agency-wide in the selection process. In FY 2010 we will develop a bank of structured interview questions to help facilitate hiring decisions.
NARA also developed a Strategic Human Capital Plan (SHCP) for FY 2009 – 2014 that provides direction for addressing NARA’s most significant workforce management challenges and opportunities. It outlines our mission, infrastructure, goals, objectives, and strategies. The plan is based on guidance provided by the U.S. Office of Personnel Management (OPM) and its foundation is rooted in the five human capital systems outlined in OPM’s Human Capital Accountability and Assessment Framework (HCAAF).

All Federal agencies are required to develop a human capital plan per 5 CFR 250 and the Chief Human Capital Officers (CHCO) Act of 2002. This plan serves as the basis to further engage all NARA offices in the management of their most important resources, their employees. By establishing a viable human capital planning process, we increase our understanding and awareness of the factors that impact our agency workforce. In particular, the SHCP establishes a systematic, data-driven, agency-wide approach to human capital management, aligned with the Agency’s mission and vision. The purpose of the plan is to address the strategic management of the agency’s human capital over the next five years.

**Milestones**

**FY 2005**
- Management intern program expanded to 2 more records centers.
- Pilot course on interview skills and techniques completed.
- System for tracking and monitoring the timeliness of recruitment actions revised.
- Supervisors’ performance plans revised to establish accountability for timely recruiting and selection.

**FY 2006**
- Management trainee program expanded to additional records centers.
- Workforce planning process that enables managers to better plan recruiting for leadership and other positions created.
- Organizational impact study conducted to consider changes to organizational structure and training needs as a result of long-range improvements to NARA workflows (see 1.3).
- Vendor to convert eOPFs selected.

**FY 2007**
- A management development program for another program office designed.
- Conversion project for eOPFs completed.

**FY 2008**
- NARA Mission Critical Occupations formally identified.
- Contract support for competency development initiative obtained.
- Competency development pilot project with NARA’s Modern Records Program completed.
- Pilot for a management development program implemented.
FY 2009
• Competency development work expanded to cover at least two additional NARA units and/or occupations.
• Leadership competency model expanded to cover all NARA leadership positions.
• NARA’s Strategic Human Capital Plan developed.

FY 2010 Estimated
• Leadership competency model expanded to cover all NARA leadership positions.
• Competency models for Office of Regional Records Services and Office of Information Services developed (excluding clerical positions).
• Competency development work for Access Programs office and at least one additional area completed.
• Structured interview question bank developed.
• Physical ability test and writing sample assessment developed.

Data source
Performance Measurement and Reporting System and quarterly performance reports to the Archivist. Targets for maintaining staff performance plans and development plans linked to strategic outcomes take into account personnel changes that routinely occur, during which personnel may not have updated plans that relate to their new duties. Because of continuous personnel changes there will always be less than 100 percent linkage.

Definitions
Staff development plan: an individualized plan to enhance employees’ knowledge, skills, and abilities, and to improve performance in their current jobs or of duties outside their current jobs in response to organizational needs and human resource plans. Leadership position: a supervisory position at grade GS-13 or above and non-supervisory positions at grade 15 or above.

Long Range Performance Target 6.2
By 2016, the percentages of NARA employees in underrepresented groups match that of the Civilian Labor Force.

FY 10 Estimated Performance
• Increase the number of employees in underrepresented groups relative to their representation in the CLF.

Outcome
NARA customer service to all segments of American society improves because the workforce mirrors the society we serve.

Significance
A diverse workforce enhances our agency by ensuring that we can draw on the widest possible variety of viewpoints and experiences to improve the planning and actions we undertake to achieve our mission and goals. By promoting and valuing workforce diversity, we create a work setting where these varied experiences contribute to a more efficient and dynamic organization and employees can develop to their full potential.

Means and Strategies
We must focus on improving our performance in hiring and promoting people in underrepresented groups by continuing our efforts to expand recruiting techniques, collecting and analyzing pertinent personnel management data, and implementing staff development programs.

Our efforts in this area are guided by our annual Federal Equal Opportunity Recruitment Program (FEORP) Plan. Our FEORP Plan contains four multi-year strategic goals that together form the foundation of our recruitment strategy for women and minorities. These goals are:

• Ensure that FEORP goals are aligned with NARA’s Strategic Plan and Strategic Human Capital Plan and integrated with workforce planning efforts;
• Expand the pipeline of women and minorities available for employment with NARA;
• Maintain a diverse high-performing workforce by effectively recruiting and retaining top talent; and
• Enhance staff development opportunities that prepare staff for upper level positions.

Each year, NARA identifies specific strategies that we will undertake to support our multi-year FEORP goals. Our strategies focus on expanding partnerships with minority-serving universities, education associations, and professional organizations; attending and networking at minority conferences and job fairs; encouraging the use of developmental assignments that provide on-the-job training opportunities for women and minorities; and ensuring that our FEORP goals and strategies are fully aligned with NARA’s Strategic Human Capital Plan and, by extension, NARA’s Strategic Plan. Progress against our FEORP goals and strategies is assessed each year as part of our human capital accountability efforts and the U.S. Office of Personnel Management’s annual FEORP reporting requirement. In addition, our FEORP plan is revised each year to reflect our latest workforce demographics; specific strategies are updated as necessary to address any under-representation at NARA.

**Key external factors** Success here depends on qualified people in underrepresented groups applying for positions at NARA in response to our recruitment efforts.

**Verification and Validation**

Definitions

Applicant: Any U.S. citizen who submits a complete application in accordance with the instructions outlined in the job announcement; Underrepresented groups: groups of people tracked by the U.S. Equal Employment Opportunity Commission: Minority groups (Black, Latino-Hispanic, Asian, Native Hawaiian/Pacific Islander, and American Indian/Alaskan Native); Women; People with Disabilities.

Long Range Performance Target 6.3  By 2016, 60 percent of NARA’s positions are filled within 80 days.

FY 10 Estimated Performance

- 30 percent of NARA’s positions are filled within 80 days.

Outcome NARA workforce is properly staffed to accomplish agency mission.

Significance An effective hiring process enhances NARA’s ability to reach the best talent in a competitive market in a timely manner. Proper workforce planning will decrease the lag time experienced when agency program offices need to commence, resume, or properly staff work vital to accomplish the agency’s strategic mission and goals. Instituting hiring processes that simplify, facilitate, and support both manager and job applicant reduces the risk of losing potential NARA job seekers to positions external to the agency.

Means and Strategies In FY 2009, we developed NARA’s Strategic Human Capital Plan, an instrument we use to document our goals and objectives for addressing the human capital challenges and opportunities we face. This plan defines how we will strategically manage our workforce both now and in the future to achieve NARA’s strategic goals and objectives. We must focus on improving our performance in workforce planning to proactively identify and understand both short and long term organizational requirements. Knowledge of the strategic priorities of program offices assists in early identification of staffing requirements.

In FY 2010 we will formally document our workforce planning process, develop tools to help managers identify their workforce needs, and identify NARA’s overall hiring projections. We will then begin to develop workforce plans.

NARA also piloted an automated hiring solution with one license to the Office of Personnel Management’s (OPM) USA Staffing tool in FY 2009. This tool automates the hiring process and reduces the time to fill positions. The pilot was successful and we anticipate expanding our automated staffing environment in FY 2010. We have experienced increasing delays in filling positions due to the overwhelming workload.
experienced by staff in screening the flood of applications absent an automated hiring tool. Expanding the use of an automated hiring tool will enable NARA to fill jobs much more quickly, allow organizations to reduce the number of vacancies in their organizations, and reduce overtime for some offices like those in our Office of Regional Records Services where we must meet customer demands, regardless of the staffing levels.

In addition, we established a Human Resources (HR) Transformation Team in FY 2009 to oversee the upgrade of NARA’s HR automation infrastructure and the implementation of specific actions to improve the timeliness to complete hiring actions in NARA. These changes are needed to improve basic HR services and to transform from a manual, labor-intensive personnel office to a strategic human capital organization. To achieve this transformation, we must deploy improved technology and support streamlined processes. Our transformation will allow us to be more productive and deliver better services to NARA’s customers.

Also, NARA has actively participated in implementing OPM’s Hiring Reform 2009 initiative supporting the President’s hiring reform agenda. We recently established a team comprising hiring managers and human resource professionals within NARA to roll out several deliverables in FY 2010. We will develop deliverables designed to map our current hiring process to improve the time to fill positions, streamline and use plain language in our job opportunity announcements, ensure applicant notification, and improve manager engagement in the hiring process.

**Data source**  Performance Measurement and Reporting System and semi-annual reports to the Archivist.

**Definitions**  Applicant: Any U.S. citizen who submits a complete application in accordance with the instructions outlined in the job announcement;  Underrepresented groups: groups of people tracked by the U.S. Equal Employment Opportunity Commission: Minority groups (Black, Latino-Hispanic, Asian, Native Hawaiian/Pacific Islander, and American Indian/Alaskan Native); Women; People with Disabilities.

**Milestones**

**FY 2009**

- NARA’s Strategic Human Capital Plan developed.

**FY 2010 Estimated**

- NARA’s workforce planning process documented.
- Current hiring process mapped, job opportunity announcements streamlined, and applicant notification process in place.
- NARA’s Workforce plans developed.
- Action plan to mitigate the “time to fill” barriers implemented.
- Staffing manager to manage the implementation and oversee operation of NARA’s USA Staffing system hired.
- Backlog of hiring actions reduced.
- Automated hiring pilot expanded.
Long Range Performance Target 6.4  
By 2016, NARA’s telework rate is 100 percent of the Federal Government average rate.

**FY 10 Estimated Performance**
- 15 percent of NARA’s eligible staff participates in the telework program.

**FY 11 Projected Performance**
- 20 percent of NARA’s eligible staff participates in the telework program.

**Outcome**  Non-traditional work arrangements enhance employee quality of life, impact recruitment and retention and supports emergency situations.

**Significance**  We recognize the importance of non-traditional work arrangements as a way to enhance the quality of employee work life. In addition, telework is a tool we can use to help recruit and retain the best workforce, improve the productivity of our workforce, decrease impediments to the productivity of our workforce, and prepare for and cope with emergency situations.

**Means and Strategies**  We continue to support the integration of telework into agency operations. In FY 2010 we will hire a Work-life Wellness coordinator who will serve as the telework program manager. Also in FY 2010, we will issue an updated telework directive that potentially will expand telework eligibility and identify a tracking mechanism to track telework agreements as well as hours teleworked. In addition, we will develop improved communications and marketing to staff to increase the visibility of the telework program and help illustrate the business case for supporting telework.

**Data source**  Performance Measurement and Reporting System and semi-annual reports to the Archivist.

Long Range Performance Target 6.5  
By 2016, public network applications are available 99 percent of the time.

**FY 10 Estimated Performance**
- Public network applications are available 98.85 percent of the time.

- Maintain and analyze NARA’s agency-wide data dictionary that contains data modeling and physical implementation information for NARA’s major mission-related systems.
**Outcome**  NARA information and services are electronically accessible to the public 24 hours a day.

**Significance**  Dramatic increases in computer interconnectivity, especially in the use of the Internet, continue to revolutionize the way our Government, our nation, and much of the world communicate and conduct business. Our customers expect information and services to be available when they need them. However, this widespread interconnectivity poses significant risks to the Government’s computer systems and the critical operations they support. The speed and accessibility, as well as the other enormous benefits of the computer age, if not properly controlled, allow individuals and organizations to interfere with critical operations for mischievous or malicious purposes. Reliable performance and security of our public network applications is essential to ensuring that customer expectations for access to our information and services can be met.

**Means and Strategies**  NARA’s fundamental strategic business goal as the national record keeper is to preserve and provide access to the records that document what the government does. NARA’s Enterprise Architecture (EA) is an information technology blueprint that specifies how NARA will use information technology (IT) to support its strategic business goal. NARA is working to enforce the governance process related to its EA. It is the enforcement of the EA governance that will allow NARA to hold all IT projects accountable for EA compliance and alignment with the Federal Enterprise Architecture. Over the past several years we have focused on EA process improvement and worked to resolve some gaps that had been identified through GAO and OMB assessments and the agency-wide review of the EA work products. As a result, NARA’s EA received an overall score of “green” from OMB in FY 2008 based on green scores in the Completion, Use, and Results categories.

The authenticity and reliability of our electronic records and information technology systems are only as good as our IT security infrastructure. We must ensure the security of our data and our systems or we risk undermining our agency’s credibility and ability to carry out our mission. Also, we risk the Government’s ability to document the results of and accountability for its programs. IT security becomes even more critical as we increase our visibility through the implementation of Web 2.0 and of electronic government initiatives that expand online services to the public. The more we increase electronic access to our services and records, the more vulnerable we potentially are to intrusions, viruses, privacy violations, fraud, and other abuses of our systems.

As we modernize our network and make available our historic records, we must also develop an enterprise storage infrastructure solution to support both operational and strategic requirements. This improved storage infrastructure will be capable of supporting current and future digitization efforts. It will also provide redundancy for improved continuity of NARA’s business services.

We made significant progress in FY 2009 to meet our FY 2010 goal of implementing NARA’s data dictionary to identify data in major mission-related systems and to facilitate data sharing and data standards development and implementation. We spent FY 2009 developing the data dictionary concept; gathering, analyzing and entering the data into the dictionary from four major NARA business systems (ERA, HMS, ARCIS, and ARC); developing a simple user interface with explanatory information to aid in the dictionary’s use, and briefing NARA staff. In FY 2010 we will continue to implement the dictionary. We will ensure that the data is current, the system is updated to facilitate NARA staff and contractors’ use of the dictionary, and the data is analyzed to identify areas of overlaps in systems. We envision that the data dictionary will provide NARA with the foundational tool to facilitate data sharing and continued development of data standards throughout the agency.
Key external factors  Constantly evolving hardware and software changes make it difficult to accommodate growth while ensuring the minimum performance levels on existing systems. In addition to the technical hurdles NARA faces in providing reliable support and services, new opportunities for strengthening the IT infrastructure from a security perspective may be introduced, which can affect the entire enterprise architecture.

Milestones

FY 2005
- Physical security of NARA’s computer infrastructure at 50 percent of NARA locations upgraded.
- Enterprise repository for NARA's Enterprise Architecture and associated IT documentation implemented.
- Development of an enterprise-wide disaster recovery plan and an enterprise-wide continuity of operations plan completed.
- Telecommunications upgrade completed.

FY 2006
- Physical security of NARA’s computer infrastructure at remaining NARA locations upgraded.
- Network operating system and agency e-mail system upgrade across NARA initiated.
- NARA’s Enterprise Architecture received overall score of “green” from OMB.

FY 2007
- Network operating system and agency e-mail system upgrade across NARA completed.

FY 2008
- Recompete of NARA Information Technology and Telecommunications Support Services contract initiated.
- Possible IT solutions for work-at-home to support Federal telework initiatives tested.

FY 2009
- NARA Information Technology and Telecommunications Support Services contract awarded.
- Strategy and Concept of Operations for integration and management of remote access for mobile users developed.
- Network capacity across the enterprise updated.
- Telephone infrastructure upgraded.

FY 2010 Estimated
- Service level agreements under the NITTSS contract across the enterprise implemented.
- Agency wide data dictionary with standardized data for major mission-related systems created.

Data source  Performance Measurement and Reporting System and quarterly performance reports to the Archivist.
Definitions  

NARANET:  a collection of local area networks installed in 36 NARA facilities that are connected to a wide area network at Archives II, using frame relay telecommunications, and then to the Internet. NARANET includes personal computers with a standardized suite of software. NARANET was designed to be modular and scalable using standard hardware and software components.
