8. Soviet Union

All our usual indicators point to a major space launch--probably another test in the Soviet manned space program--within the next few days. It could be a third test of the new capsule, possibly with cosmonauts on board, or a further test of a new upper-stage propulsion system for boosting a spacecraft into a much higher orbit.

An unmanned flight around the moon (with return to earth) is also a possibility. The best opportunity for such a flight during April will come up next week.
