8. Soviet Union

All our usual indicators point to a major space launch--probably another test in the Soviet manned space program--within the next few days. It could be a third test of the new capsule, possibly with cosmonauts on board, or a further test of a new upper-stage propulsion system for boosting a spacecraft into a much higher orbit.

An unmanned flight around the moon (with return to earth) is also a possibility. The best opportunity for such a flight during April will come up next week.

3. Soviet Union

Soyuz-1, the new Soviet manned spacecraft launched on Saturday, has been having serious difficulties. The cosmonaut tried to bring the spacecraft down at 8:00 PM EST on Sunday, but failed. He tried on the next orbit, and may have succeeded. If not, he will have two or possibly three more chances, at ninety-minute intervals, to come down in the USSR Sunday night. Failing these, he must wait until Monday night.

The difficulty in deorbiting may be a result of the troubles the spacecraft has been having with stabilization, communications, and power supplies. These are more serious than the Soviets have experienced with any of their previous manned craft.

Soyuz-1 carried only one man, but had room for three. It was the first manned test of a new spacecraft the Soviets have been developing, most likely for a circumlunar flight. The Soviets may have originally intended a more complex mission for this spacecraft, such as orbiting a second spacecraft and transferring crew members, but scrapped these plans when troubles developed.
