Foreword

(PSC-NF) The Suez Crisis is another addition to the Special Series Crisis Collection published by the NSA History and Publications Division. The Suez crisis of 1956 is an interesting study of U.S. intelligence, especially its Sigint aspect, during a "brushfire" situation. The crisis presented United States policymakers with a unique intelligence dilemma. Two U.S. allies, Britain and France, opposed American policy objectives. Working with Israel, they conspired to take the Suez Canal and preserve their influence in the area. This study, by _______ provides remarkable insights into Anglo-American relations, U.S. relations with Egypt, France, and Israel, and American concerns over the Soviet Union and its reaction to the crisis. The study is based on a review of over three thousand intercepted messages.

(PSC-NF) Ms.______ traces the crisis from its historical roots with the construction of the Suez Canal in 1869 through the rise of Nasser to negotiations over arms and aid in constructing the Aswan Dam, to Nasser’s nationalization of the Suez Canal Company, to British-French-Israeli plots, to the actual invasion. She clearly shows that “the attack occurred without our knowledge and came as a complete surprise to us” – despite President Eisenhower’s public statements to the contrary. U.S. intelligence, especially Sigint, provided key clues to the coming offensive. U.S. Comint closely followed the allied invasion and closely monitored Soviet reaction. _______ study also reveals that despite British-United States estrangement, the United States was dependent on British collection efforts on most Middle East targets and that the close working relationship between the Anglo poseurs in the Sigint area was never seriously threatened. In fact, during the height of the crisis U.S. and British elements continued to exchange the most sensitive information. _______ study is an important contribution to our understanding of the Second Party relationship and to the use of Sigint in a brushfire situation.

NSA Historian
The Suez Crisis: A Brief Comint History

Withheld from public release under the National Security Act of 1959, 50 U.S.C. 3605 (P.L. 86-36)

(U) The Suez crisis of 1956, which erupted only days before the Soviet invasion of Hungary on 4 November, was the first major test of the National Security Agency (NSA) during a short-term, "brushfire" crisis. The war for Suez also presented the United States with a unique political and intelligence dilemma: two close U.S. allies, Britain and France, opposed American policy objectives. The Suez crisis raised many provocative questions about when and how much the United States knew about British, French, and Israeli plans for the invasion of Egypt and how U.S. officials reacted to these plans. In addition, the Suez war provided a fascinating case study of the role of Communications Intelligence (Comint) in the U.S. decision-making process. Finally, the battle for Suez served as a model for examining the effect of political disension and conflict on the intimate Anglo-American intelligence relationship. How this strange and troubling crisis developed, what role Comint played in U.S. planning and policy, and how the Suez conflict affected Anglo-American relations are the issues this paper addresses.

(A-CCO) Before and during the Suez crisis, NSA analyzed more than three thousand diplomatic and seven hundred military messages from Near and Middle Eastern nations as well as from other countries worldwide. Even considered in isolation from other intelligence, this intercept provided U.S. officials with a remarkable insight into events leading to the surprise attack on Egypt by nations friendly to the United States.

(U) The Suez crisis created a painful predicament for U.S. policymakers. Without American support or knowledge, two staunch U.S. allies, in collusion with Israel, plotted to go to war for a cause the Eisenhower administration believed was rash, unjustified, and potentially very dangerous. Ultimately, France, Britain, and Israel would become the overt aggressors against Egypt. As a result, the United States was in the awkward position of siding with Nasser against its allies. The Soviet factor further complicated the situation, especially for the United States. The U.S. allies implicitly relied upon America to counter any belligerency by the Russian "Bear." The U.S. administration was never sure how far the Soviets would go to assist Nasser or resist Western aggression in the region. Eisenhower described the Soviets as both "furious and scared" by the concurrent crises in Eastern Europe and the Middle East. This, he averred, made for "the most dangerous possible state of mind." For this reason, Soviet movements and actions were of primary interest to the U.S. intelligence community.

Background (U)

(U) The roots of the 1956 Suez crisis can be traced at least to the construction of the Suez Canal, which opened on 17 November 1869, and to the original Suez Canal Company ownership agreements. The Viceroy of Egypt (then part of the Ottoman Empire) granted the Suez Canal Company, founded by French engineer Ferdinand de Lesseps, a concession to operate the canal. In exchange, the Canal Company agreed to pay certain taxes, rents, and percentages of gross profits to Egypt. Furthermore, Egypt retained an agreement for the canal to revert to Egyptian control after 99 years.
Although British ships were the largest single users of the canal, Britain did not obtain its interest in the Suez Canal Company until 25 November 1875 when, in an attempt to avoid bankruptcy, Egypt turned over 177,642 shares in the company to the British Government. An 1888 agreement between major canal users and the Turkish government guaranteed free passage for ships of all nations, made the company responsible for operating the canal impartially in war and peace, and placed responsibility for the canal's protection with Egypt.

In 1936 the British negotiated a new treaty with Egypt. In exchange for a British naval base at Alexandria, Egypt would regain representation on the Suez Canal Company's board of directors and receive annual rental payment for use of company facilities. World War II interrupted the normal course of business between Britain and Egypt, and it was not until after the war, in 1949, that Egypt was effectively reinstated as a board member and also began to receive seven percent of the company's gross profits. However, beginning in 1936, Egypt became a real factor in the Suez Canal Company for the first time since 1875.

Before the First World War, much of the Middle East was under the control or influence of the Ottoman Empire. With the defeat of the Ottoman Empire and Germany, British and French influence greatly expanded during the postwar period. After World War II the region again underwent radical changes brought about in part by a weakening of the major colonial powers, especially Great Britain and France, the birth of the nation of Israel, and an explosion of Arab nationalism.

France, Britain, and the United States drew up a Tripartite Declaration in 1950 in recognition of the growing threat to Western power and influence in the region, the importance of oil shipments to the West, and the potential impact of the Cold War on the Middle East. Under the terms of this accord, the three nations agreed to act in concert to thwart any seizure of Middle Eastern territory by an outside force. The allies also promised to ensure a balance between arms shipped to Arab countries and to Israel. Further, the three agreed the number of weapons shipped to either side would be only enough to maintain internal order.

The Rise of Nasser

The 1952 Egyptian coup that overthrew the monarchy of King Farouk also set the stage for the nationalization of the Suez Canal and the 1956 crisis. The real power behind the coup was Gamal Abdel Nasser, who formally assumed the Egyptian presidency in October 1954. Nasser vocalized and manipulated pent-up Egyptian resentment over the occupation of the Suez Base by nearly eighty thousand British troops. After lengthy negotiations, the British agreed to withdraw their forces from the Canal Zone by June 1956.

During the winter and spring preceding the nationalization, Egypt also negotiated new agreements with the Canal Company. The accords specified greater company investment in Egypt and increased employment of Egyptian pilots. In return, Egypt agreed to exempt the company from certain Egyptian taxes.
A Search for Weapons (U)

(U) While he solicited agreements with the Canal Company and the British government, Nasser also began to seek arms from the United States. In early 1955 the U.S. State Department responded to Nasser's request for $27 million worth of weapons by demanding payment in cash — knowing full well Nasser did not have the money. The Eisenhower administration was not then a major weapons dealer in the region and did not wish to become one. Furthermore, administration officials reasoned that such an arms sale would drastically disturb the balance of power in the Middle East. Nasser also threatened to purchase weapons from the Soviets if the United States refused to sell him the arms he had requested. Nasser's warning "sounded suspiciously like blackmail" to Eisenhower, who was not about to play into Nasser's hands.7
(U) Spurned by the Americans, Nasser, during the summer of 1955, secured an arms deal with the Soviet Union estimated to be worth between $80 and $200 million. An Egyptian military delegation concluded the deal in August 1955 during a meeting in Prague, Czechoslovakia, with its Soviet counterpart. The Czechoslovak role was arranged at Moscow's request in order to create the fiction that the arms were Czechoslovak and not Soviet.
The Soviet Factor (U)

(U) It was, however, the Egyptian-Soviet arms deal that complicated the negotiations for Western financing for the Aswan High Dam project. Initially, the Soviet arms deal intensified Western resolve to provide financing for the High Dam project and thus counter Soviet influence. In November 1955 the United States, Britain, and the World Bank jointly offered $70 million for the first stage of the dam.

(The Eisenhower Administration gradually backed away from the financing plan, however, as it became convinced that Nasser was playing the West against the East. He probably was. In April 1956 Nasser publicly stated he was considering a Soviet offer to build the dam. United States officials were annoyed and apprehensive. They reasoned that Egypt would have difficulty meeting its financial obligations to the dam project with the added burden of an expensive new arms debt. In addition, the administration feared that, given Nasser’s overtures to the Soviets, it would be unable to convince Congress to go along with the long-term financing such an arrangement necessitated. Whatever the ultimate reasons for the deal’s collapse, events moved quickly upon Egyptian Ambassador Dr. Ahmed Hussein’s return to Washington on 17 July. Journalists who met Hussein at the airport pressed him for Egypt’s position vis-à-vis the High Dam project.

(U) On the morning of 19 July, Ambassador Hussein went to the State Department for a meeting with Secretary of State John Foster Dulles. According to published accounts of that meeting, Dulles began the discussion with an explanation, in “tones rather sad and firm,” of the many difficulties he was encountering in securing the loan. Ambassador Hussein reportedly became agitated as Dulles droned on. Finally, the ambassador blurted out, “Don’t please say you are going to withdraw the offer, because we have the Russian offer to finance the Dam right here in my pocket!” According to these accounts, Dulles immediately retorted, “Well, as you have the money already, you don’t need any from us! My offer is withdrawn!”

25X1 and 6, E.O.13526
(U) The real reasons behind the Eisenhower administration's rescission of the High Dam deal remain unclear. It does not appear, with the benefit of hindsight, that pulling out of the agreement was a wise decision for the United States. In effect, the United States and Britain left Egypt largely in the hands of the Soviets. Both the Egyptian military and the Egyptian economy were under Moscow's sway. As Dulles suggested, at least part of the U.S. administration's reluctance to follow through on the agreement may be explicable as fear of failure. That is, with any vast undertaking there is an enormous danger of the deal going sour. The country responsible for financing a bad risk would be held liable for its failure and could become enshrined in Egypt’s collective memory as the cause of great misery, misfortune, and humiliation. Another factor must have been the impending U.S. elections. The High Dam financing was not a very popular issue with the American public. Eisenhower, in the throes of an election campaign, was not eager to press for massive funding for a country flirting with Moscow during the height of the Cold War. Moreover, U.S. officials did not believe the Soviets would come through with the funds if the Western nations revoked their offer. This assumption was not wholly unjustified. Moscow immediately started to hedge when Dulles rescinded the U.S. offer, and in fact, the Soviet-Egyptian deal took several more years to complete.
Soviet Surprise and Vacillation (U)

(CNS-NF) The Egyptian government was certainly much less surprised by the U.S. action than was Moscow. The U.S. revocation apparently caught the Soviet Union totally off guard, as its contradictory and confused behavior attests. On 21 July Soviet Foreign Minister Dmitri Shepilov told newsmen that his government was not considering aid to Egypt for construction of the dam. The Egyptians were shocked and angered by this apparent betrayal.

25X1 and 6, E.O.13526

(U) Soviet Ambassador to Cairo, Yevgeni Kiselev, contradicted Shepilov's statement with an announcement on 23 July that the Soviet government was willing to finance the High Dam scheme if Egypt requested such assistance. That evening, however, Kiselev issued a formal denial of the remarks attributed to him. The following day, 24 July, Kiselev again reversed himself, telling foreign correspondents, "We are now ready to finance the dam if Egypt wishes." It took three more years, however, before the Soviet Union and Egypt finalized a contract providing for the construction of the first stage of the High Dam.

(U) In the interim, Egypt was left in the lurch by both the East and the West. The rescission of the U.S. aid offer and the tenuity of the Soviet position, as well as the withdrawal of British troops from the Canal Zone, undoubtedly influenced Nasser's decision to nationalize the canal. If either superpower had agreed in 1956 to assist Egypt with the High Dam construction, Nasser might very well not have nationalized the canal, which, in any event, was scheduled to revert to Egyptian ownership in 1968.

Nasser's Answer to Superpower Ambivalence (U)

(CNS-NF) When Nasser nationalized the Suez Canal Company in a fiery speech on 26 July 1956, he precipitated a crisis that was to preoccupy his country and much of the world for months. Nasser's decision came as a complete shock to U.S. officials.

25X1 and 6, E.O.13526

(U) Nationalizing the canal elevated Nasser's stature among the Arabs. At the same time, Nasser's action pleased Moscow, which saw in Egypt's inevitable alienation from the West an even greater opportunity for expanding its influence in the region. The British and French, however, were outraged. They feared freedom of passage through the canal might not be guaranteed by Nasser, thus threatening Western Europe's oil supplies. Both London and Paris took steps to ensure that tolls would continue to be paid to the Canal Company and not to the Egyptian government. In response, Egypt issued an
ultimatum demanding that all users begin paying tolls to the newly nationalized company within one week.

Israel Grows Anxious (U)

(U) Western Europe and the United States were not the only parties made apprehensive by Nasser's action. The nationalization also intensified Israeli anxieties. Israel's primary concern was that Nasser's decision presaged a renewal of hostilities with its Arab neighbors. Israel had never been permitted passage through the Suez Canal; King Farouk had instituted prohibitions against Israeli shipping on the day Israel declared its independence in May 1948. Moreover, Egypt subsequently blockaded the Straits of Tiran at the mouth of the Gulf of Aqaba, Israel's only other seaway to Asia and Africa.

(U) The evacuation of British troops from the canal in June 1956 only served to heighten Israeli fears, despite Israel's mistrust of the British, which dated back to the bitter Israeli fight for independence from the British mandate. The Suez base represented the last large Western outpost in the region, and Israel felt even more isolated in the midst of the Arab world. Moreover, Fedayeen raids from neighboring countries were taking a continually higher toll on Israel. The formation of a joint Egyptian-Syrian command in October 1955, coupled with the new command's rapid acquisition of Soviet-bloc weapons, compounded Israeli fears.

British-French Fears—Real and Imagined (U)

(U) Britain and France each had its own motive for imbuing the Suez issue with major international overtones. The British claimed Nasser had illegally seized control of the Suez Canal Company in which the British government was the largest single shareholder. The French, as well as the British, viewed the seizure as a direct threat to their strategic interests, especially their oil-supply routes.

(U) France had a special reason for wanting to see Nasser humiliated. In addition to strategic considerations, many French leaders placed blame for France's troubles in Algeria squarely with Nasser. The chimerical theory in French circles was that if Egyptian moral and material support to the Algerian rebels could be stopped, the rebellion in Algeria would magically disappear. This same mentality helped justify major new French arms sales to Israel.

(U) When he nationalized the canal, Nasser promised to pay for any property seized if the Suez Canal Company's assets were turned over to Egypt. Naturally, the company's British- and French-dominated Board of Directors refused to surrender assets that extended far beyond the Suez Canal itself. On 29 July Nasser seized the Canal Company's offices in Egypt, imposed martial law in the Canal Zone, and forbade all Canal Company employees to leave their jobs.

(U) The British and the French immediately began agitating for active measures to ensure the uninterrupted operation of the canal. They asserted that the Egyptians lacked the technical expertise necessary to keep the canal functioning smoothly. President Eisenhower soon suspected that Britain and France were forwarding this argument only as a pretext for military intervention on their part. The President warned British Prime Minister Anthony Eden, a few days after the nationalization, that his claim of Egyptian inability to operate the canal would "never be considered... as a legitimate cause for immediate occupation by force."
Eisenhower as Peacemaker (U)

(U) On 31 July a portentous message from Prime Minister Eden arrived in Washington. The message warned the United States that Britain was determined to "break Nasser" and was already developing military plans toward this purpose. Eisenhower, who firmly believed the British decision was mistaken and based more on "emotion than on fact and logic," responded swiftly and unequivocally. He warned Eden that no U.S. help could be expected if Britain resorted to force. The President made it clear to the British Prime Minister that the United States was convinced of the "unwisdom even of contemplating the use of military force."

[25X1 and 6, E.O.13526]
Meanwhile, Secretary Dulles flew to London on 1 August to convince the British and French to settle the Suez dispute peaceably. There, he secured an agreement with the allies for a multinational conference aimed at restoring international authority over the Suez Canal. On 12 August, Nasser formally declined the invitation to attend the conference. This refusal could hardly have come as a surprise to U.S. or British officials.

Despite Nasser’s efforts, 22 of the 24 nations invited did attend the conference, which opened in London on 16 August. The conference resulted in an agreement among 18 of the participants for a U.S.-sponsored plan that included respect for the sovereignty of Egypt, just compensation to Egypt for the use of the canal, and international supervision of the canal.

A peaceful resolution of the crisis seemed within reach when Nasser agreed to meet with a five-nation committee, headed by Australian Prime Minister Robert Gordon Menzies. The Menzies mission traveled to Cairo to present the “Dulles plan” to the Egyptian President. Nasser, however, quickly rejected the plan, and the crisis intensified.

Even as the negotiations continued, U.S. suspicions about Anglo-French intentions increased. Before the Menzies mission reached Egyptian soil, the British had granted the French permission to station French troops on Cyprus—a highly unusual step and hardly a sign of nonbelligerency. Moreover, both the French and the British ordered their nationals to begin evacuating Egypt, Jordan, Syria, and Lebanon. With the Menzies mission a failure, Secretary of State Dulles next turned his efforts to a plan for a Suez Canal Users Association (SCUA). The idea behind SCUA was to organize the using nations to ensure free passage should the canal be blocked or blockaded, or should the flow of Middle Eastern oil be disrupted. SCUA members would use their own pilots to transit the canal and would collect their own users’ fees, out of which Nasser would be reimbursed for use of the canal. Although it is now widely known that Dulles originated the SCUA plan, at the time Anthony Eden was credited with devising the Users Association. This deception was part of an effort to keep the United States out of the limelight. Nonetheless, the Egyptians were suspicious that Dulles was the man behind SCUA.
(TSC-NF) The Egyptians believed that U.S. acceptance of SCUA was an ominous sign because it indicated the depth of U.S. anger with Egypt and placed the United States squarely in the British-French camp. Moreover, Cairo labeled SCUA "an open and flagrant aggression on Egyptian sovereignty" and publicly proclaimed that "its implementation means war." As expected, Nasser rejected the SCUA plan. Within days events in Egypt made SCUA a dead issue.

(U) On 15 September, Egyptian pilots not only took charge of operating the canal but did so with increased efficiency. With one of their major arguments for international control of the canal undermined, Britain and France now took the issue to the United Nations without first consulting their U.S. ally. Eisenhower was disturbed and deeply mistrustful of Anglo-French intentions. As he recorded in his memoirs, he wondered about Britain's and France's true purpose in going to the United Nations. Was it "a sincere desire to negotiate a satisfactory peace settlement . . . or was this merely a setting of the stage for eventual use of force in Suez?"  

(U) Whatever the reality, negotiations at the United Nations dragged on throughout the month of October without conclusive results. The British, French, and Israelis used the time to finalize their plans for resolving the Suez problem by means of military intervention.

(PS) In September 1956 Allen Dulles, the Director of Central Intelligence (DCI), submitted to the National Security Council two Special National Intelligence Estimates (SNIE) on possible Anglo-French military action in the Suez Canal. In the first, Probable Repercussions of British-French Military Action in the Suez Crisis, dated 5 September, the Intelligence Advisory Committee (IAC) began with the assumption that indications were sufficient to warrant an estimate of the possible repercussions of British-French military action in Suez. The IAC members concluded that Britain and France were most likely to resort to the military option if they were confronted with another direct and major Egyptian challenge. However, the SNIE pointed out that, even without further provocation, Britain and France might resort to force if convinced that negotiations were not going to produce a prompt settlement satisfactory to them. In these circumstances, the assessment continued, London and Paris would attempt to document Nasser's refusal to negotiate such a settlement. The British and French would then dramatize the refusal before world opinion as justification for the use of force.

(TS) The second SNIE, The Likelihood of a British-French Resort to Military Action Against Egypt in the Suez Crisis, was published on 19 September and evinced awareness in the U.S. intelligence community of the potential for imminent conflict. The SNIE concluded that "the U.K. and France will almost certainly seek to keep the way open for the use of force." Although the report concluded that the British and French were likely to resort to force only in the event of "some new and violent provocation," the SNIE clearly stated that, should this happen, the two U.S. allies would "probably use force against Egypt even without U.S. support." Clearly, then, the Eisenhower administration was cognizant of the possibility of joint British and French action behind the back of the United States. The SNIE also averred that it was possible, though unlikely, a renewal of Arab-Israeli hostilities might "furnish an occasion for U.K.-French military intervention against Nasser." Taken together, the conclusions of the various intelligence estimates submitted before the Israeli attack on Egypt and the subsequent Anglo-French intervention clearly illustrate that the United States actively considered the possibility of an Anglo-French plot.
The Anglo-French role in the conspiracy began with the news that Nasser had nationalized the canal. The British and French immediately undertook war preparations. General Hugh Stockwell, commander of the 1st Corps of the British Army, was summoned to London on 3 August to prepare secret war plans, code-named "Operation Musketeer."
Meanwhile, without Britain’s knowledge, France took steps to include Israel in the conspiracy. On the day after the nationalization, Israel quietly requested and was granted a substantial increase in French arms shipments in violation of the 1950 Tripartite Agreement. Simultaneously, French Defense Minister Maurice Bourges-Maunoury approached Israeli Director General of the Defense Ministry Shimon Peres about a joint Franco-Israeli assault against Egypt. Peres responded positively to the suggestion. Further action on the issue, however, was suspended until 1 September when the French told Israel about Operation Musketeer.50

Not until 13 October did France inform Britain about plans for Israeli participation. On 16 October, British Prime Minister Eden, French Prime Minister Mollet, British Foreign Secretary Selwyn Lloyd, and French Foreign Minister Christian Pineau met secretly in Paris to put the finishing touches on the Anglo-French portion of the conspiracy. A crucial element in the agreement was a guarantee that Israel would not attack Jordan, with whom Britain had a defense treaty. The Frenchmen assured their British counterparts that Israel would move against Egypt and not against Jordan.51

Finally, on 21 October, representatives of all three colluding nations met in Sérres, just outside Paris, to finalize arrangements. Their plan called for Israel’s first moves against Egypt to mimic raids against Fedayeen camps in Egypt. These raids would mask a full-scale invasion by British and French troops. In the event the Anglo-French forces failed to live up to their agreement to invade Egypt, Israel could then quickly withdraw its troops.52

Despite their deep mistrust of the British, the Israelis agreed to this plan because they were convinced that the blockading of the Straits of Tiran, the recent addition of Jordan to the Arab Joint Command,53 and the massive influx of arms into Egypt indicated Arab plans for a full-scale war against Israel.54

Another important decision agreed upon in Paris was to keep the circle of those knowledgeable about the plan very small. In France and Britain, only the Prime Ministers, Foreign Ministers, Defense Ministers, and a very few of their closest confidants knew of the plot.55 Who in the Israeli government knew about the plan is much less clear. At the very least, Prime Minister David Ben Gurion, Foreign Minister Golda Meir, Chief of Staff Moshe Dayan, and Shimon Peres knew the details of the plot.56

The Plot Thickens (U)

On 15 October, Eisenhower was briefed on U-2 flights that revealed the presence in Israel of 60 French Mystère jets — a clear violation of an earlier agreement whereby France was allowed to sell 24, not 60, Mystères to Israel.57 Eisenhower’s worst fears were confirmed. France was maneuvering behind the back of the United States. The President recalled in his memoirs that, at this moment, he felt “we were cut off from our allies.”58
Mystere swing-wing Fighter
(U) During the last two weeks of October, communications between Paris and Tel Aviv were extremely heavy. Simultaneously, there was a "virtual blackout on communication between the United States on the one side and the French and the British on the other." Regular reports from London and Paris to the U.S. State Department suddenly disappeared. Moreover, the British, French, and Israeli ambassadors to the United States were all rather mysteriously and conveniently out of the country.

(FSC-NF) An even more ominous development now arose. According to Eisenhower biographer Stephen Ambrose, American Sigint collectors began to pick up unusually heavy radio traffic between Britain and France. U.S. codebreaking efforts against the intercept reportedly were unsuccessful.

25X1 and 6, E.O.13526

Contradiction (U)

(U) Despite all the evidence provided by U.S. intelligence that some kind of British-French operation was in the works, U.S. officials avowed ignorance of the plot. Eisenhower, in his memoirs, asserted that as late as 15 October, when Israel began to mobilize its forces, the administration "could not fathom the reason" for the mobilization. Eisenhower claimed the United States did not fully realize that Israel planned offensive action until the day of the attack. Even then, until Israeli troops actually crossed into the Sinai, the administration expected Israel to attack Jordan and not Egypt. According to Eisenhower, the administration still did not believe Israel's attack was part of an orchestrated plot involving Britain and France. On 30 October, the day after the Israeli invasion of Egypt, Eisenhower met with Secretary Dulles and other advisers. According to Eisenhower, "One thing the conference reflected: our lack of clear understanding as to exactly what was happening in the Suez area due to our break in communications with the French and British. We were in the dark about what they planned to do."

(U) Moreover, Eisenhower biographer Stephen Ambrose asserts that White House Press Secretary James Hagerty told reporters the attack came as a complete surprise. Worse still, Secretary Dulles, in a 16 December 1956 press conference, stated: "It is quite true that the actual attack occurred without our knowledge and came as a complete surprise to us." These reports infuriated Central Intelligence Agency (CIA) director Allen Dulles who, a month later, leaked stories to the press that the intelligence community had predicted Suez. Allen Dulles told reporter Anthony Tully, "My brother said the State Department was taken by surprise. That was only technically correct. What he meant was that the British, French, and Israeli governments had not informed our ambassadors. But we had the Suez operation perfectly taped. We reported that there would be a three-nation attack on Suez. And on the day before the invasion, CIA reported it was imminent."

- Past Egyptian provocations, the key role of Egypt in the Arab threat, and U.K. involvement with Jordan indicate the attack will be launched against Egypt in the very near future under the pretext of retaliation and exceeding past raids in strength. Possible motivations for such an Israeli mobilization were considered to be... to provide a diversionary threat against Egypt in order to afford greater freedom of action for France and the U.K. in the Suez situation and to relieve Egyptian pressures on France in North Africa.

The Watch Committee report proved prophetic. Within days, Israeli forces attacked Egypt, crossed the Sinai, and were virtually poised on the banks of the Suez Canal.

**Attack (U)**

THE SURPRISE ATTACK BEGAN ON 29 OCTOBER 1956 WHEN ISRAELI COLUMNS WITH AN ESTIMATED STRENGTH OF AT LEAST SIX BRIGADES THRUST INTO THE SINAI AT KUNTILLA AND RES AL NAQBI. THE ISRAELIS OVERRAN RELATIVELY SMALL EGYPTIAN DEFENSE FORCES AND RACED UNOPPOSED ALMOST TO THE BANKS OF THE SUEZ. THE SWIFTNESS OF THE ISRAELI ADVANCES PLACED THE DEFENDERS OF GAZA, RAFAH, AL ARISH, AND ABU AWELGA IN INDEFENSIBLE POSITIONS. THE EGYPTIAN TROOPS WERE FACED WITH A LARGE ISRAELI FORCE WHICH HAD NOT YET BEEN COMMITTED AND OUTFLANKED BY THE ISRAELI COLUMNS THAT HAD SPED FROM ELATH TO NAKBI.
(U) On 30 October, Britain and France concurrently issued an ultimatum demanding a cease-fire and the withdrawal of all combatants from the canal zone. The ultimatum was the cornerstone of the tripartite plot. France and Britain warned that, unless both Israel and Egypt agreed to a cease-fire and withdrew ten miles on either side of the canal, an Anglo-French force would intervene to keep the warring parties apart. The conspirators of course were certain Egypt would reject the demand and were equally sure Israel would comply. An Israeli "withdrawal" to within 10 miles of the canal would in fact constitute an advance. If their plan succeeded, Israel would gain the Sinai, the French and British would occupy the canal, and Nasser would be neutralized.

(U) The Eisenhower administration was outraged by the ultimatum. The President sent Eden and Mollet a warning. In his message, Eisenhower told the allies, "I feel I must urgently express to you my deep concern at the prospect of this drastic action... It is my sincere belief that peaceful processes can and should prevail to secure a solution." Eisenhower put Britain and France on notice that the United States could not be counted on to come to their assistance.

The Soviets, embroiled in their own conflict in Eastern Europe, offered only moral support to Egypt.

(U) At the same time, the U.S. Ambassador to the United Nations, Henry Cabot Lodge, informed the U.N. General Assembly of U.S. plans to introduce a resolution that called for an immediate cease-fire, Israel's withdrawal to its borders, all U.N. members refraining from the use of force, and an embargo against Israel until it withdrew its troops. British Prime Minister Eden essentially ignored the United States and refused to have anything to do with the U.N. resolution.
MAP II
THE BATTLEFIELD October-November 1956

- Towns
- Airfields
- Airfields and aircraft Tangible 31 October-2 November

The Battlefield October-November 1956
The following day, the first British troops disembarked on the beaches of Port Said, while French troops landed at Port Fuad.67

(U) The Soviet Union delivered a strongly worded protest to the British and French on 5 November. In its complaint, the Soviet Union denounced British and French actions and threatened to intervene on behalf of the Egyptians. Soviet Premier Nikolai Bulganin's letters to the French, British, and Israeli governments declared that Moscow was "fully resolved to use force to crush the aggressors and to restore peace in the Middle East" and even contained a veiled threat to use nuclear weapons against London and Paris if hostilities continued.68

(U) Bulganin's letter to Eisenhower had an entirely different tone. The Soviet Premier suggested that a joint Soviet-American force intervene in the Middle East if Britain, France, and Israel refused to agree to a cease-fire. The United States not only rejected this proposal but threatened nuclear retaliation if London or Paris were attacked.69 Despite strong U.S. disagreement with its allies' position, President Eisenhower would not stand by and let his old friends and NATO partners be intimidated.70

-CCO- Moreover, the U.S. administration had reason to believe the Soviets were bluffing. NSA reports disclosed that the Soviets, while quietly advising Egypt to appeal for volunteers, arms, and assistance from all countries, provided nothing more than verbal support to the Egyptians. Comint indicated there was no movement of Soviet fighters into Syria or any other Middle Eastern country. Early on 6 November, the U.S. presidential election day, Eisenhower ordered U-2 flights over Syria and Israel to ascertain whether there were any Soviet fighters at Syrian bases. By noon, the U-2 flights had confirmed that there were no Soviet fighters in Syria.71

Not with a Bang, But a Wimper (U)

(U) Just as the British troops at Port Said were preparing to advance southwards into Ismailia and Abu Suweir, the British government, under heavy U.S. and international pressure, agreed to a cease-fire at midnight on 6 November. The French and Israelis reluctantly followed suit. Thus ended the Suez war of 1956.

Israel was especially bitter about the outcome.
Suez: A Sobering Reflection for Politics and Intelligence (U)

(CC) The Suez crisis highlighted not only discord between the United States and its allies but also the lack of Arab unity—a recurrent theme in recent Middle East history. The fractious Arab “allies” never managed to agree on any coordinated plan of attack. Instead, they expended most of their time and energy worrying about being sabotaged by one another. Throughout the crisis, Comint clearly illustrated their disarray.

(CSC) For example, Comint reflected Syrian and Egyptian suspicion about pro-Western Iraq. The presence of Iraqi troops in proximity to British forces in Jordan gave rise to an anti-Iraq propaganda campaign. Syria and Egypt spread rumors that Iraq was working in league with Israel and Great Britain to partition Jordan, and Syria reported intercepting Iraqi arms shipments to dissident Syrian tribes. The Jordanian General Staff ordered units to observe closely all activities of Iraqi troops in Jordan, especially those encamped near the British base in Mafraq.

(U) Perhaps a more ominous and far-reaching effect of the Suez crisis was the erosion of Western influence in the Middle East and the deepening of Soviet penetration into the region. Before the war there was some hope that Nasser’s professed policy of non-alignment might translate into an evenhanded approach toward Western and Soviet-bloc nations. However, the aggression against Egypt by two close U.S. allies ensured that both Egypt and Syria would rely much more heavily on Soviet and Soviet-bloc countries for both economic and military assistance. Egyptian suspicion of the West deepened. The Suez crisis helped set the stage for years of conflict-by-proxy between the United States and the USSR in the Middle East.

(CSC) The Suez crisis also illuminated a significant weakness in the U.S. Comint effort. Unquestionably, NSA made a major contribution to the U.S. intelligence effort during the crisis. The United States, nonetheless, was profoundly deficient in the Comint resources it devoted to the Middle East and relied instead on British intercept.

Shift in Perspective (U)

(CS-CC) As early as the spring of 1956, U.S. policymakers recognized the potential dangers inherent in U.S. dependence on British sites and the lack of U.S. intercept stations devoted to Middle Eastern targets. In response to the growing tensions in the region, the United States Communications Intelligence Board (USCIB) decided on 17 April 1956 to emphasize Middle Eastern targets at the expense of the Soviet Black Sea.
The USCIB directive meant that NSA would request GCHQ, as an allied agency, to make concurrent changes in their Middle East and Black Sea coverage. Soon after the USCIB directive, NSA and Britain's GCHQ/London Communications Security Agency (LCSA) convened a Middle East Planning Conference. The first formal conference meeting was held on 7 May 1956.

(TSC) Even before the conference began, GCHQ and NSA had already agreed to certain changes in coverage. The Senior U.S. Liaison Officer in London (SUSLOL), Captain Prescott H. Currier, USN, informed the Director, NSA, Lieutenant General Ralph Canine, on 16 April that the British had decided to increase their Middle East intercept effort at UKM-257 by eight teams (about 40 operators) "immediately." Previously, there were only three people involved in the processing effort at UKM-257. In addition, GCHQ agreed in principle to the transfer of U.S. naval personnel from USF-61 to provide continuity of coverage of Black Sea naval and naval air targets.100
As had been agreed upon at the conference, two Arabic linguists from NSA (David B. Nuckols and Gene M. McKee, USA) were ordered to begin a 90-day period beginning 22 June 1956. In addition, Emanuel Azar, Chief of NSA's Near and Middle Eastern Branch, went to temporary duty from 1-8 July as an expert linguist. In order to augment USF-61 as quickly as possible, Canine, with CIA and State Department concurrence, planned to dispatch "carefully screened" Army personnel as well as operators from the NSA civilian program. Although there was space for 80 operators at USF-61, at that time only 47-48 positions were manned, and the number of positions wired and installed was 64. Because the CIA did not have a pool of intercept operators available for duty at the site, in May NSA requested the Army Security Agency (ASA) to supply 35 operators to bolster the station's personnel strength. In July, the men began arriving on increments of five enlisted men and two officers per week for six-month tours of duty. This, however, did not entirely alleviate the personnel problems at USF-61, and NSA was required to furnish five additional communications experts to the site.

On 15 August, CIA Director Dulles indicated his desire to phaseout CIA's role at USF-61 because the CIA had neither a rotation program nor a personnel pool to properly maintain this station on a continuing basis. With the growing tensions in the Middle East and USCIB's decision to make USF-61 the primary U.S. Sigint site targeting that region, the CIA believed it would be unable to meet these increased demands. Representatives of NSA, CIA, and the Navy Security Group met and decided that the best course of action was to transfer control of USF-61 to the Navy. The military personnel would be overtly associated with the U.S. Navy but purportedly in support of a State Department Communication (Radio Relay) Station.

In line with the recommendations of the Middle East Planning Conference, Canine concurred with the British request to assign Egyptian, Syrian, and Arab Joint Command callsign identification and plain text to Category I should fighting occur.
Whether or not NSA targeted and exploited British communications remains an enigma. Following the Suez crisis, George Wigg, a Labor Member of Parliament, claimed in a news conference that the United States had broken British, French, and Israeli codes. Wigg did not reveal his sources or justify his claim, and no NSA records can be found to substantiate his accusation.

NSA's Performance (U)
not share some of its most valuable and revealing intelligence data with the British. What the British kept from the United States remains purely in the realm of speculation.

A Diligent, Delicate Endeavor (U)

{SFC-NF} Despite the closeness of the Anglo-American Comint relationship, NSA was very interested in GCHQ's unilateral response to the Suez operation. On 2 November Canine requested Currier's assessment of any changes in GCHQ cover assignments in the area; any changes in GCHQ's effort and processing; the possibility of GCHQ diverting cover to close support; any other changes made by GCHQ during the previous two weeks; or any changes GCHQ was contemplating. In response, Currier reported on 5 November that the 2d Wireless Regiment at Famagusta, Cyprus, had raised all Egyptian traffic to full 24 hour-a-day coverage and added four additional full positions on Egyptian targets. New positions were manned by troops from the 128th Close Support Training Group. Some extra cover of Arab Joint Command traffic was also added, but no further cover changes were noted. In Currier's opinion, there was no evidence that the British would implement close support plans because virtually all troops that could be used for close support were stationed at UKM-257.136

{FSC} In spite of the strain in relations between their respective governments, NSA and GCHQ apparently managed to maintain a close working relationship throughout the crisis. According to one of NSA's Deputy Liaison Officers, John J. Keenan, who was in Cheltenham, England, during the Suez crisis, his British counterparts went out of their way to reassure the Americans there that the friction between Washington and London
would not damage or curtail the NSA-GCHQ working relationship. Keenan added that he did not detect any change in the U.S.-British partnership. Most U.S. and British personnel at Cheltenham regarded the crisis as a high-level tiff that did not affect day-to-day relationships. Mark Pattie echoed Keenan's sentiments. According to him, there was no detectable decrease in either the quantity or the quality of British intercept provided to NSA during the Suez crisis. Moreover, Canine told Currier on 5 November the consensus at NSA was that UKM-257 was doing an "excellent job" and that current U.S. requirements from Britain were being "fully met."

Regardless of the generally harmonious Comint relationship between the United States and Britain, the Suez crisis revealed numerous problems in the processing and reporting of intelligence within the U.S. Comint establishment. As the volume and scope of the crisis increased, U.S. communications became overburdened, inefficient, and erratic. Despite these handicaps, NSA provided invaluable intelligence to its customers.

NSA's shortcomings as well as its strengths quickly became apparent during the critical months in the autumn of 1956. The Suez crisis was the first major test of the Comint Alert System outlined in NSA Circular Number 53-2 (Revised). Basically, the circular defined the four Comint Alert categories (Alpha, Bravo, X-ray, and Yankee) and delineated the conditions requiring that an alert be instituted. A Yankee Alert was indicated when a "planned U.S. or Allied activity may stimulate a foreign communications reaction or provoke military or paramilitary action by a foreign nation with respect to the U.S." Once an alert was declared, all U.S. Comint units involved were responsible for ensuring that the facilities under their control continuously analyzed foreign communications developments in order to keep abreast of significant or abnormal conditions. Moreover, all units were responsible for "rapid and secure forwarding of information" to DIRNSA and other agencies in accordance with a special time and distribution schedule contained in the NSA Circular. For example, in a Yankee Alert, intelligence reports were to be issued every six hours at "immediate" precedence, while a periodic summary was to be issued every 24 hours.

In reaction to Israel's attack on Egypt, USF-61 declared "Alert Yankee Egypt-Israeli" at 2048Z on 30 October. In less than three hours, Canine requested the Army Security Agency, Europe (ASAE) and USN-40 (Bremerhaven, West Germany) to initiate a Yankee Alert to cover possible Soviet reaction to the Middle East crisis. The Office of General Studies (GENS) assumed the role of Executive Agent within NSA Headquarters. On the following day, the alert was expanded to include Hungary, Poland, and East Germany. The alert was "so extensive in time, geographical scope, and areas of activity that the Comint community was provided with a test of Comint operational and reporting capabilities and limitations as close as possible to actual war conditions."

The alert pushed an already-saturated Comint communications net over the edge. Canine quickly discovered that the alert instructions contained in NSA Circular 53-2 did not envision an alert of the scope and complexity necessitated by the simultaneous Suez and Hungarian crises. As a result, at 1650Z on 6 November, the Director canceled all previous Yankee Alert instructions and issued new instructions adapted to this unique situation. Comint units were ordered to issue spot reports as the situation developed, not at fixed times. Furthermore, only the Executive Agent was allowed to release negative reports, that is, reports showing a lack of activity.

The technical procedures by which alerts were declared and implemented also revealed their insufficiencies. There was, for example, a seven-hour delay between the time DIRNSA's alert declaration message was drafted and the time it was actually released. This distressing time lag largely resulted from a lack of specific instructions for declaring an alert. The failure of some elements to eliminate or lower the precedence of
normal, daily reports generated other problems. Consequently, some important alert materials were delayed while regular reports were cleared.\textsuperscript{132}

(CO) The primary U.S. concern vis-à-vis the Middle East situation was clearly the possibility of Soviet intervention there. U.S. Sigint sites in Europe were tasked to watch for any signs of Soviet reaction or impending intervention. A DIRNSA message on 1 November 1956, illustrated the U.S. fear of Soviet involvement in the tense Middle East arena:

\begin{center}
\textbf{25X1 and 6, E.O.13526}
\end{center}

In particular, NSA was so concerned about a stand-down of Soviet long-range bomber forces that a special NSA emergency processing team was set up at USM-1 (Vint Hill, Virginia) with the sole purpose of scanning civil traffic for any positive or negative reflections of Soviet long-range air force activity.\textsuperscript{145} By 6 November, however, the consensus was that the stand-down was related to an annual Soviet holiday celebration and not to an intended intervention in the Middle East.\textsuperscript{156}

Lessons Learned, Lessons Ignored (U)

The worldwide Sigint alert implemented in the fall of 1956 provided the impetus for certain changes in alert and reporting procedures within NSA. The novel concept of "decentralized reporting," that is, reporting capability as close as possible to the source of intercept, proved to be the most timely and efficient means of disseminating reports. NSA Headquarters encouraged and expanded the use of "canned" (i.e., predetermined) distribution indicators, usually designated by digraphs, that substituted for lengthy addresses on reports. In addition, the Director of NSA clarified the chain of command of those authorized to declare alerts, required field sites to prepare a set of emergency procedures for future crises, and, most importantly, reviewed and upgraded communications capabilities.\textsuperscript{139}

According to the Critique of the 1956 Yankee Alert, "inadequacy of communications represented the major problem of the entire alert."\textsuperscript{146} Overloading was due to communications facilities inadequate to handle the volume of data produced, greatly increased demands on circuit time, and faulty reporting procedures.\textsuperscript{141} The alert critique stated unequivocally that "the Yankee Alert made it appallingly apparent that an investigation of the communications capabilities of the National Comint Establishment is urgently needed."\textsuperscript{142}

Despite this caveat and the other lessons of "Yankee Alert: Egypt/Israel," NSA once again faced a crisis in the Middle East as the Lebanese and Iraqi situations brought the United States into direct military involvement in the region during the summer of 1958. Again, the U.S. Comint establishment experienced annoying and dangerous delays caused by inadequate communications capability and unclear alert instructions.

Even though the United States' closest ally had maneuvered behind its back to take military action against another sovereign nation, the U.S.-U.K. Comint relationship continued without interruption. This patent British deception of the United States might have been expected to inspire a U.S. effort to establish a reliable, well-equipped, and independent intelligence-gathering operation vis-à-vis the Middle East. It did not. NSA was again heavily dependent upon British intercept during another Middle East crisis.
less than two years after the Suez imbroglio. In 1958 the U.S. Navy's collection facility was still small, understaffed, and ill-equipped, and NSA continued to rely upon the British as its prime source of Middle East Comint.

(U) Perhaps one lesson to be derived from the Suez crisis is that whether by dint of loyalty or the inertia inherent in any established system or bureaucracy, the Anglo-American Sigint alliance was easily strong enough to continue unabated despite a disruption in the political relationship. In spite of British duplicity before and during the Suez crisis, our Sigint interdependence was untouched by the temporary "spat" between allies. The interesting question raised by this phenomenon is, At what point is the Sigint relationship between allies affected by the current political environment? Evidently the Suez crisis was not of sufficient political magnitude to warrant any disruption in the Sigint relationship.

(U) The other important lesson of Suez is a familiar one: intelligence is valuable only to the extent that those in power not only have access to it but use it wisely. Those at the highest levels of the Eisenhower administration did receive intelligence data warning them of the Anglo-French-Israeli conspiracy. This information was either ignored, mistrusted, or covered up for the sake of political expediency. Despite public denials and disavowals in the aftermath of Suez, the fact remains that the intelligence data was made available to top U.S. policymakers. The intelligence community fulfilled its commitment to provide timely and accurate information. Beyond this, intelligence officials relinquish their authority to political decision-makers. However, as the Suez crisis showed, intelligence is not an end in itself but a tool to be wisely employed, badly mishandled, or simply ignored.
