

## Instructions:

1. The stacking pattern for palletized records is 10 standard records center boxes per row, 5 rows per pallet, totaling 50 boxes per pallet.
2. When beginning the palletization process for pallet 1 start with the highest numbered box and load the rest of the boxes in descending sequential box number order following the pattern shown in the diagram above.
3. 4 boxes per row are placed perpendicular to the rest of the other 6 boxes in that row, alternating the pattern for each row.
