JOB
CITATION

10 ACTION
TAKEN
(NARS USE
ONLY)

The Geography and Data User Services Division wish to transfer the Special Program Information tape (SPIT) to National Archives Machine-readable library.

1978 and thereafter.
9 Track 6250 BPI.

This tape contains 14 separate computer programs that relate to the use of the Geographic Base File/Dual Independent Map Encoding (GBF/DIME), computerized address matching and computer mapping.

The programs contained on the tape are as follows:

EASYMAP - A Fortran choropleth (shaded area) mapping program that produces maps by geographic area. Maps can obtain various densities of shading to represent different data values. Data values and other text can be printed inside the boundaries of each geographical area. EASYMAP gives the user considerable flexibility in producing line printer maps.

DACS is a Fortran program designed to calculate areas and compute centroids of user-specified areas such as blocks, tracts, block-groups or other local areas in the GBF/DIME file.

SECS is an A. & S. COBOL program which detects common errors in the digitizing of GBF/DIME files. It checks all pairs of segments within each tract to verify that segments do not intersect.

PAGE OF

7 ITEM NO	8 DESCRIPTION OF ITEM (With Inclusive Dates or Retention Periods)	9 SAMPLE OR JOB NO	10 ACTION TAKEN
	<p><u>STREETS</u> - A program that displays street and non-street information from the GBF/DIME file. This creates a listing of street name address ranges within specific zip codes, census tract codes for the entire GBF/DIME file.</p> <p><u>ADMATCH</u> - A program designed to match GBF/DIME or Address Coding Guide (ACG) reference files against user data files containing address information and append census geocodes to the user data file. The system consists of pre-processor which standardizes address fields and the matcher program. Separate versions are supplied for IBM OS assembler, IBM DOS assembler and COBOL. The COBOL version was developed by a user group and is not currently supported by the Census Bureau.</p> <p><u>UNIMATCH/SIPSIA</u> - A generalized record lineage system has additional capabilities over the Admatch program. Separate versions are supplied for IBM OS assembler and IBM DOS assembler.</p> <p><u>SPLITS</u> - A COBOL program which will separate pre-processed Admatch GBF/DIME records into individual block face records prior to Admatch matching.</p> <p><u>CARPOL</u> - A Fortran IV program designed to assist with carpooling. The program generates a list of potential riders for carpooling.</p> <p><u>GRIDS</u> - A Fortran IV program which produces various types of line-printers maps (shaded, value, density).</p> <p><u>URBATLAS</u> - A Fortran IV program designed to generate a boundary coordinate file from the Buran Atlas Tract Boundary files. The output is compatible with EASYMAP and can be used for producing maps.</p> <p><u>CMAP</u> - A Fortran IV program designed to generate line printer maps. It is a very basic mapping program but can be used to produce simple maps or to demonstrate computer mapping.</p> <p><u>LIMITSEG</u> - A COBOL program which lists GBF/DIME file records which make up the GBF coding limit boundaries.</p>		

Disposition: PERMANENT. Offer to the National Archives along with the final census summary files scheduled as permanent under Job NC1-29-79-7 Item 125A ("Final Census Summary Files, public use version. PERMANENT. Transfer to NARA when 10 years old."

All other copies: Destroy when no longer needed for administrative use.
