BACKGROUND INFORMATION

These files contain documents pertaining to employee occupational health hazards.

These files are maintained in DLA field activities. A new file number is required for data relative to employee occupational health hazards. There is a recognized need to retain such data in order to determine the long range effects of health hazardous agents. This data is vital in establishing an employee's long term exposure to such agents in the adjudication of Workman's Compensation claims. The retention of environmental monitoring data is in compliance with the Occupational Safety and Health Act (OSHA) health standards provisions. OSHA has established the requirements for the retention of such records for up to 40 years.

Current disposition standard: None

Recommended standard: Destroy after 40 years.

These records are not covered in the GRS.
