Agency or Establishment **Department of the Army**
Record Group / Scheduling Group **Army Undifferentiated**
Records Schedule applies to **Department-wide**
Schedule Subject **The Standard Army Maintenance System Enhanced (SAMS-E)**
Internal agency concurrences will
be provided **No**

Background Information

AR 750-1, Army Materiel Maintenance Policy establishes policies and assigns responsibilities for the maintenance of Army materiel. It provides and defines requirements for performance and management of the materiel maintenance function. It relates to two levels of maintenance: field and sustainment. Field consists of maintenance functions formerly known as operator and/or crew (equipment operators and vehicle crews), unit, and direct support. Sustainment consists of maintenance functions formerly known as general support and depot operations of the Army maintenance system and Armywide program for commodity-unique maintenance. This regulation also applies to maintenance of all materiel owned or supported by the Army, except materiel purchased with nonappropriated funds (see AR 215-1), special intelligence property, real property, foreign materiel used for training, leased/rented materiel (unless the lease and/or rental agreement dictates otherwise), medical, materiel maintenance as implemented in AR 12-1, and those aspects of combat and materiel development that impact the materiel maintenance function. The provisions of this regulation are applicable to all Army and civil-funded property under the direct control of the U.S. Army Corps of Engineers.

The proponent of this regulation is the Deputy Chief of Staff, G-4. In support of AR 750-1, The U.S. Army Materiel Command submits for disposition the Standard Army Maintenance System Enhanced (SAMS-E).

SAMS-E is a decentralized tactical Logistics Information System operated and maintained at the unit level. SAMS-E provides automated maintenance and supply management of Class VII equipment and Class IX (and other) supplies. SAMS-E provides information to each level of command – from the user to the division

or corps, wholesale, and DA levels. SAMS-E is a maintenance management tool that contains a limited amount of PII (name, gender, and DOB) to assist front line managers with work scheduling, and dispatching of government equipment.

Source input is manually input by users, data is transferred from other Logistics Information System (LIS) via Secure File Transfer Protocol (SFTP) and are approved for disposition under RN 25-1jjjj. System documentation includes record layouts, specifications, and code books which are covered under RN 25-1mmm.
