7 Item Number	8 Description of Item and Proposed Disposition	9 GRS or Superseded Job Citation	10 Action taken (NARA Use Only)
	<p align="center">Policies and Procedures for Property Accountability AR 735-5</p> <p>Background The Automated Battlebook System (ABS) is a portable deployment-planning tool that provides real-time visibility of land-based and afloat Army Pre-positioned Stock (APS) items and applicable "battlebook" reference information. In its current form, the ABS is released on CD-ROM approximately every quarter with updated data, battlebook text, and new program changes.</p> <p>To leverage technology in the management of APS, the Army contracted with Stanley Associates, Inc., in 1995 to develop, implement, maintain, and support a Windows-based client-server software application called the Army War Reserve Deployment System (AWRDS). Each of the Field Support Command's pre-positioned sites uses the AWRDS to manage the APS at its location. Information on the APS is transmitted in real time via the Internet to the master data servers in Alexandria, Virginia, and Rock Island, Illinois. It is through a full-time connection with the AWRDS master data servers that the ABS maintains real-time visibility of APS data. This full-time connectivity allows ABS users to update their ABS data base at any time through the Internet. The AWRDS not only interfaces with the ABS but also with a variety of other Standard Army Management Information Systems (STAMIS).</p> <p>Note Use record number (RN) 25-1kkk for source/input records, RN 25-111 for automated system administrative reports, RN 25-1mmm for system documentation and specification, and RN 25-1nnn for backup files.</p> <p>Proponent is Army Material Command (AMC)</p>
