2.	<p>UPPER AIR METEOROLOGICAL OBSERVATION FILES (FN 1309-02, AR 340-18-13). Documents relating to the observation and recording of upper air meteorological conditions, such as temperature, relative humidity, atmospheric pressure, and windspeed and direction. Included are completed data collecting forms and recording forms, summaries, monthly meteorological data tabulations, and related documents.</p> <p><u>Disposition:</u></p> <p>a. Artillery meteorology: Destroy DA Forms 3583 and DA Forms 3677 after 3 years. Destroy other records after 3 months.</p> <p>b. RDT&E meteorology: Destroy original recorder charts, meteorological worksheets, and other unprocessed data records after 3 months.</p> <p>c. ^{RDT&E} Meteorological data reports and summaries: Destroy in current files area after 20 years.</p> <p><u>Background:</u> This SF-115 proposes the retention of data reports and summaries for 20 years in the current files area (the schedules for artillery and RDT&E meteorology, above, are unchanged).</p> <p>Research, Development, Test, and Evaluation (RDT&E) and solar energy studies require a minimum collection of 10 years of meteorological data to reflect accurate average weather. The optimum for these studies would be 20 years. The longer the period to be considered, the more accurate the average data becomes; if the period of consideration is insufficient, the presence of one abnormally hot, cold, wet, dry, or windy year will result in an invalid average weather picture.</p> <p>The meteorological data reports and summaries are invaluable as a data base for planning RDT&E operations, RDT&E studies (solar radiation, comfort index, etc.), and for tactical planning purposes. Such data were used in a 1975-1977 realignment study for the Army's aviation test facilities, and is used to compute PERSHING missile trajectories. The data base will be more useful if it is available for 20 years.</p>	<p>NC1-AU-79-12</p> <p>NC1-AU-79-12</p>
