SECTION III - APPRAISER'S COMMENTS

This job, submitted by Army, establishes disposition instructions for records accumulated in connection with the restoration of DoD facilities that have been subject to contamination because they were sites where hazardous materials were stored, handled, or used. In this job, Army proposes to destroy records when 50 years old. NARA should approve this job as submitted. Records are not archival, particularly since other records documenting Army policies and activities in this area are already scheduled for permanent retention under FN 238-03, Chemical and Nuclear Site Restoration Files, and in the central decimal files of the Office of the Secretary of the Army. Also, records on the subject will be available to secondary researchers in certain permanent records of the Environmental Protection Agency's Office of Emergency and Remedial Response. A 50 year retention period is called for due to the requirements of P.L. 96-510, which mandates the retention for 50 years of records documenting the identity and other characteristics of hazardous materials deposited in a facility
