~~Retain until~~ microfilm is verified as an adequate substitute for the paper record, promptly after filming.

3. Personnel documents of a temporary nature, only, relating to individual officer and enlisted personnel. These are documents determined not appropriate for filing in the official retained personnel record because of their routine or otherwise temporary nature, or because the information they contain, or the action they document, essentially is summarized in, or recorded on, documents comprising the retained personnel record or other long-term or permanent records (such as personnel diaries). Or, they duplicate documents in other long-term records (such as the military pay record). They comprise those documents listed on the "Delete List" (see copies attached as enclosures (3) and (4)), and similar or equivalent documents.

~~Retain until two years old.~~  
*Destroy 2 years after date of document*

The above listed items relate to the newly adopted Navy microform record system for its military personnel records. The system was developed after it became apparent over a period of years that changes were necessary for continued effective records and personnel management. It represents the first substantial change made in the individual personnel record

system since 1948.

The current paper record (jacket) is a large one and essentially unstructured. For each individual officer, there are at least three folders, and each folder contains an average of 85 documents. At least half the papers in each of these are routine or otherwise temporary, and not essential to proper documentation of the individual's military career. Yet, the Navy holds more than 897,000 of these records, and more than 1,500 authorized personnel regularly use them. As many as 85,000 individual records may be in use at any one time. Consequently, maintenance and retrieval problems have arisen, particularly during times of mobilization and demobilization.

The Navy's problems in turn have impacted on other agencies, including the National Archives and Records Service and the Veterans Administration, and the quality of service provided former service personnel. The Assistant Archivists for Federal Records Centers and for Records Management have both called attention to deficiencies in the current paper record system. Specifically, they have cited difficulties the National Personnel Records Center (Military Personnel) has in retrieving information and documents from the current paper record.

At the direction of the Chief of Naval Operations, studies were undertaken to alleviate these problems and provide an improved records system. All available documentation and retrieval systems and recording media were explored, and the feasibility of their application to the military personnel record evaluated. The results strongly suggested the feasibility of applying micrographics technology to the personnel record.

To verify these findings and test the operational effectiveness of a microform system for the record, a one-year pilot test was made, utilizing the records of women Navy officers. Test results were favorable, and adoption of the system was recommended by the Chief of Naval Personnel, and approved by the Chief of Naval Operations as having the greatest potential for system and cost effectiveness.

Recent technological advancements made, and further experience obtained during system development stages, support the advantages and feasibility of the unitized microform record system adopted by the Navy.
