	<u>Background:</u> The Naval Criminal Investigative Service is developing internal and external web sites that reside on the unclassified (NIPRNet) and classified (SIPRNet and JWICS) networks. All essentially have the same features and record-keeping requirements. The unclassified external web sites are the primary tool for NCIS to inform the general public and DON (restricted access) of its mission and activities. The public site also serves as a gateway for authorized users to access internal sites and applications. The unclassified internal web sites are also restricted to authorized users and contain a wide variety of information created by NCIS and supporting the NCIS mission as well as hyperlinks to other DON and Federal government informational sites. Classified sites are restricted to NCIS employees, contractors, and other authorized Federal government agencies. The classified sites have external links to authorized agencies within the intelligence community. Each NCIS component activity is responsible to develop, administer, and authorize the posting of information on the site. The Information Technology Directorate (Code 15) maintains the site and is responsible for site policy and administration.
