Background Information

DoD Components, Service and Combatant Commands publish foreign travel Personnel Recovery requirements found in the Foreign Clearance Guide, theater entry requirements specify that an ISOPREP must be completed before certain foreign travel. PRMS ISOPREP/EPA (Evasion Plan of Action) is the primary web-based collection tool for the Form DD-1833 ISOPREP record. In the unlikely event that PRMS is unavailable the form DD-1833 ISOPREP record can be completed at the unit by hand with an EPA attached and upload into PRMS ISOPREP/EPA at a later time The PRMS web application allows authorized individuals to input sensitive personal identifiable information (PII) describing their personal characteristics, along with authentication statements comprised of factual information that only the individual would know.

This information is collectively referred to as ISOPREP data. EPAs contain mission based planned evasion, signaling, and communication actions should the individual become isolated. The ISOPREP/EPA data is used to facilitate the recovery or support of personnel that become isolated from US control and must survive evade resist and escape (SERE) before returning to friendly control. Via the ISOPREP/EPA component of PRMS, the Joint Personnel Recovery Center (JPRC) and Personnel Recovery Coordination Cell (PRCC) personnel, retrieve stored ISOPREP/EPA data for use by recovery forces to positively authenticate, identify, facilitate medical, physiological, family support and ultimately return the isolated alive or their remains to friendly control.

DoD Components, Service and Combatant Commands are also required to collect and aggregate critical information relating to the

circumstances, planning, execution and reintegration of isolated DoD military, civilians, contractors or those as designated, so they can be returned to friendly control. The Personnel Recovery Mission Manager (PRMM) web-based tool collects and aggregates information surrounding the five execution operational tasks of PR (report, locate, support, recover and reintegrate). The ISOPREP record is combined with other critical PR mission event information records to create a PR event mission folder. This PR event mission folder directly supports a DoD components ability to plan conduct and adapt to recovery operations. The Joint Personnel Recovery Center (JPRC) and Personnel Recovery Coordination Cell (PRCC) personnel or other DoD components can create or upload PR event mission folder record information into the Personnel Recovery Command and Control (PRC2) system, PRMS (Personnel Recovery Mission Software), web-based software application or other DoD systems.
