Copies sent to agencies, NAST NIA 9/18/92

Administration of DOE Health and Mortality Study.

Correspondence, memoranda, reports, meeting minutes, and related documents pertaining to all aspects of DOE and predecessor agency study of radiation exposure health effects upon agency and contractor employees. The DOE Division of Biomedical and Environmental Research within the Office of Energy Research assembled this file in 1978 in response to public controversy surrounding the termination of a DOE contract with Dr. Thomas Mancuso. Dr. Mancuso had been collecting data and conducting health effects research on DOE workers since 1964. In withdrawing Mancuso's funds for the Health and Mortality Study, DOE was charged with attempting to suppress findings linking occupational radiation exposure with higher levels of cancer. According to former Division officials, this file was assembled by obtaining duplicate copies from existing files in DOE headquarters and field offices. The intent of establishing the file was to dispel coverup charges by presenting a comprehensive historical overview of agency health effects research into radiation exposure. The file includes internal agency research reports as well research evaluations and policy formulations. Due to the extensive controversy this matter generated, as well as to the intense ongoing interest in radiation exposure health effects, permanent disposition of these records is warranted. Volume: 9 cubic feet (40 3-ring binders; item index included in box 9); dates: ca. 1959-1978; unclassified.

Disposition: Permanent. Send to Washington National Records Center immediately. Transfer to National Archives when 25 years old (January 1, 2003).
