Ultra-Sound Effects Study

Medical records abstracts, interview sheets, and other source data used to prepare a report on the possible adverse effects of ultra-sound medical devices on unborn children. Source data will be used to verify the report's conclusions and provide additional information, if needed, for supplements to the report. Volume of material is between 30 and 35 cubic feet and is located in the Denver, Colorado area.

Transfer study material to the Denver Federal Records Center on completion of the study. Destroy in December, 1985.
