<td>This request for records disposition authority covers a series of records, &quot;Patient radiological records,&quot; maintained in the Film Library, Diagnostic Radiology Department, NIH Clinical Center. The Film Library is primarily responsible for maintaining and providing x-ray films for authorized users in patient care and biomedical research at the Clinical Center. This series was described in a comprehensive request for disposition authority for records of the Clinical Center, (job no. NCI-90-78-9: item 32); however, the series was only described, not scheduled in that request. NCI-90-78-9 does contain a lengthy explanation of the value of these records and of the reasons why a fixed retention could not be determined. The present request provides for disposal of records when there has been no patient or research activity on the case for 10 years, and when responsible clinical researchers judge that there is little probability that the records will be needed. As explained in NCI-90-78-9, such judgements cannot be absolutely certain. Therefore, a 30 year retention in a Federal Records Center is requested because of the possibility that a patient may return to NIH or that unforeseen developments in biomedical science may make the records important for research.</td>

| 1       | Diagnostic radiological records, comprising x-rays and other roentgenographic images produced by various devices and procedures such as body and head scans created by computerized transaxial tomography. Files include positive photographic images resulting from ultrasound procedures and related studies and interpretations. Located in Diagnostic Radiology Department.  

   **a.** Disposition: Retain in Diagnostic Radiology Department for 10 years from (1) latest patient activity, or (2) reference request for the film or (3) request from appropriate clinical program for retention of the record. Transfer inactive records to Federal Records Center. Destroy 30 years after transfer. |
