Schedule Subject                    Records of the Differential Global Positioning System (DGPS)

Internal agency concurrences will be provided   No

Background Information            The U.S. Coast Guard Navigation Center currently operates the nationwide Differential Global Positioning System (DGPS). This system was established in the late 1980's to augment Global Positioning System (GPS) derived geographic positioning data through accuracy corrections and integrity monitoring. The system was created because the United States controlled GPS signals available for public reception were intentionally degraded from 1983 through 2000. The augmentation provided by DGPS was necessary to meet minimum requirements for maritime positioning and navigation in the waters of continental United States including the Great Lakes, portions of Alaska, and Hawaii. GPS signal degradation was discontinued in 2000. This, combined with improved GPS technology, elevated GPS positional accuracy to meet the requirements for harbor and harbor approach navigation, as well as USCG mission requirements. The U.S. Coast Guard has no further need to operate or maintain the Differential Global Positioning System. The system will be decommissioned in 2021. This schedule provides for the disposition for records related to the development, operation and maintenance of the system.
