Automated Case Management Systems

Executive Office for United States Attorneys and United States Attorneys' offices

The position of United States Attorney was established by the Judiciary Act of 1789 (1 Stat. 73, § 35), and the mission of the United States Attorneys' Offices (USAOs) is to prosecute criminal offenses and litigate civil matters on behalf of the United States in all 94 Federal judicial districts nationwide. 28 U.S.C. § 547. By Attorney General Order No. 8-53 (April 6, 1953), the Executive Office for United States Attorneys (EOUSA) was created to "[p]rovide general executive assistance and supervision to the offices of the United States Attorneys." 28 C.F.R. §0.22.

Per 28 C.F.R. §0.22, EOUSA is charged with publishing and maintaining a U. S. Attorney' Manual and a United States Attorneys' Bulletin for the internal guidance of the U. S. Attorneys' offices and those other organizational units of the Department concerned with litigation.

To assist in its mission, the EOUSA has developed and maintained automated case management systems, i.e. databases, that collect information from the 94 United States Attorneys' Offices (USAOs) regarding criminal and civil matters; cases and appeals; and personnel resources. The data is used primarily to justify budget requests, allocate resources among USAOs, and produce management reports. The data is compiled into an Annual Statistical Report at the end of each fiscal year. The information is also used to produce numerous periodical and ad-hoc reports for the Attorney General, the Office of Management and Budget, the General Accounting Office, Congress, various federal agencies, private sector organizations, and the public in general as a part of the Freedom of Information Act (FOIA).

The current EOUSA automated case management systems include two systems: the Legal Information Office Network System (LIONS) and a personnel resource tracking system (currently known as the USA-5 system). The first system stores basic information about the matters, cases and appeals themselves such as charges, statutes, and defendant sentencing. The second system tracks personnel resources in relation to the work required to prepare, defend, and prosecute the matters, cases, and appeals.

The USAOs utilize both systems to capture information related to the casework performed in their respective districts. The data for both systems are stored in consolidated databases located in a central location and are managed by the EOUSA Information Technology (IT) staff. The two systems' databases store data for all USAOs.

All statistical reporting for the personnel resource tracking system data is performed from the transactional database.

This schedule applies to EOUSA's Case Management and Personnel Resource Tracking systems and to future systems that may supersede or complement these systems with a similar purpose and function

Automated Case Management Systems

A. Case Management System (currently LIONS)

1. Inputs.

- a. Data entry documents used as case management input/source records designed and used solely to create or update the records in the case management system (examples include: Civil Initiation Sheet, Criminal Initiation Sheet, Closing Sheet, Criminal Immediate Declination Sheet, etc.)

Disposition: **TEMPORARY** Destroy after data has been successfully captured, entered, and verified.

GRS 20/204

- b. Case related documents (examples include: correspondence and court filings) used to create or update the records in the case management system

Disposition: File with associated case file or other appropriate file Destroy or transfer to NARA according to disposition instructions of the associated file.

Filing Instruction

2. Master File. The Case Management system maintains information related to matters, cases, and appeals handled by the USAOs. The system tracks the status of matters, cases, and appeals and enables USAO management to analyze litigation trends in order to project workloads and resource requirements. Data is copied on a monthly basis and imported into the national LIONS database
