

## Request for Records Disposition Authority

Records Schedule Number           DAA-0049-2013-0004  
Schedule Status                    Approved  
  
Agency or Establishment           Bureau of Land Management  
Record Group / Scheduling Group   Records of the Bureau of Land Management  
Records Schedule applies to       Agency-wide  
Schedule Subject                   Legacy Rehost System (LR2000)  
Internal agency concurrences will  
be provided                        No

Background Information            The LR2000 is an electronic system of information pertaining to the use and availability of Federal public lands administered by the Bureau of Land Management (BLM). LR2000 provides Bureau employees and customers with a centralized source of land status information such as ownership (agency, State, etc.), surface management agency (the BLM, U.S. Forest Service, National Park Service, etc.), use authorizations (permits, rights-of-way, mining claims, mineral leases, etc.), and segregation (withdrawals, classifications, etc.). Information in the system has been compiled for the purpose of establishing a publicly accessible record of transfers of title to and from the Federal Government and authorized uses of public lands. Some information in the LR2000 System is restricted under the Privacy Act of 1974. LR2000 is a business-essential national system (encompassing 9 subsystems or modules) that provides internal and external customers with Intranet/Internet access to land and mineral use authorization, land title, and other data extracted from the BLM's case files that support the BLM land, mineral, and resources programs in addition to the implementation of the President's National Energy Policy and the Energy Policy Act of 2005. The LR2000 system and its subsystems or modules contain abstract information from approximately 6 million land and mineral cases. The case files remain the official record for this information. Several Legacy Systems were re-hosted into the LR2000 System; other modules are in development. \*Case Recordation (CR) module is an automated system for recording data for land and mineral, title, use authorization, and withdrawal cases. Data includes serial number, case type, name and address, legal land description, case actions, and general remarks. \*Legal Land Description (LLD) module is an automated system that describes land in accordance with a cadastral or special survey, including principal meridian, township, range, section, survey type, number and suffix, aliquot part and

nominal location, acreage, and geopolitical information. \*Mining Claim Recordation System (MCRS) is an automated system containing more than three million cases, including data about mining claims recorded with BLM. Data includes serial number, mining claim name, claimant name and address, legal land description, case actions, and general remarks. MCRS includes records of lode and placer mining claims, mill sites, and tunnel sites located on public lands. \*Status (ST) is an automated system that contains historical data pertaining to title cases that transferred surface and/or mineral rights to or from the U.S., and restriction of U.S. rights, such as withdrawals, segregations, and classifications. \* Cadastral Survey Field Note Indexing System (CS) is an automated system that provides an on-line index to the survey field note records maintained throughout BLM. Data associated with surveys include surveyor, date of survey, contract number and date, approval date, boundary, principal meridian, township, range, subdivision, survey type, survey number, claim name and claimant name. Data from this system includes surveys from the early 1800s to the present. \*Bond and Surety System (BS) is an automated system that contains bond and surety information for branch offices of BLM. Its purpose is to streamline, accelerate, and facilitate bond actions, by making information readily accessible. \*Master Name System (MN) is an automated system that contains names, address, name entity identification numbers (NIDS) and the category of name entities which classifies the name as (A) agency, (C) corporate, or (P) private. \* Serial Number Automation Module (SNAM) is a system that allows the user to generate a single or block of serial numbers for Case Recordation or Mining Claim Recordation. When the application generates the next serial number(s), it will take the next available number from the log for a given administrative state and verifies that the number is not used in the LR2000. This module is currently in development. \* National Oil & Gas Lease Sale (LSS) module records, tracks, and reports public challenge information in the form of protests, requests for State Director Review, appeals and litigation. The LR2000 system links to or supports several other systems: BLM Collections and Billing System (CBS); BLM Management Information System (MIS); Minerals Revenue Management System (MRM); Automated Fluid Mineral Support System (AFMSS); Communication Site Rental Calculation Module (CSRC); Lands and Realty Authorization Module (LRAM); and BLM Application Security System (BASS).

BLM/GRS Schedule 30 now comprises 12 items. The predecessor system to LR2000, Automated Land and Mineral Record System (ALMRS 30/item1) used some of the modules now re-hosted in LR2000 but with more limited functionality. See GRS/BLM Schedule 30 for more information about ALMRS and other related modules.

This schedule supersedes BLM/GRS Schedule #30, items 1, 2, 3, 4, 5, 6, 7, 9, 10. [Automated Land and Mineral Record System (ALMRS, item 1); Records System Release 1.0 (RR1-Alaska, item 2); Case Recordation System, (CRS, item 3); Online Recordation & Case Access System (ORCA, item 4); Mining Claim Recordation System (MCRS, item 5); Legal Land Description System (LLD, item 6); and Status System (ST, item 7); Bond and Surety System (BS, item 9); Master Name System (MN, item 10).
