IRM 1.15.27, New Item 52
Enterprise Data Access Strategy (EDAS)-Integrated
Production Model (IPM)

Background:

*IRS systems and personnel require access to taxpayer/tax processing and related data for research and decision support that is accessible to them on a regular basis and is outside the current transactional systems. EDAS-IPM provides Examination and Collection Units consolidated access to core taxpayer data needed by a wide range of modernization projects to support case identification, selection, prioritization and delivery, compliance analysis and decision analytics. **EDAS-IPM is not a system of record for any taxpayer data nor is it the authoritative source for that data.** The consolidation of data sources into a centralized data store merely provides a single point of access to corporate data. Future projects can use this centrally managed resource thereby accelerating their application development, and reducing overall development cost and risk to the Service by obviating the need for the creation of redundant "stovepipe" data sources.*

*EDAS-IPM is a read-only Oracle database at the Detroit Computing Center (DCC). Corporate data from flat or VSAM (Virtual Storage Access Method) files will be extracted from the authoritative source by traditional masterfile extracts at the Enterprise Computing Center - Martinsburg (ECC-MTB), transmitted electronically to DCC and loaded onto the IPM using Oracle's SQL*Loader utility. Corporate data from DB2 databases will be extracted and loaded via the Informatica ETL tool.*

Access by client projects will be the responsibility of those projects; EDAS-IPM will not provide an application layer. User interfaces will be built by the individual systems accessing EDAS-IPM and customer access will be determined by the client systems. The minimum amount of relevant and necessary information is captured in order to link the records that need to be related specifically for a research query. The system prevents disclosure of personally identifiable information to its normal users through limited screen views and encryption.

This system supersedes EDW-BFM (Enterprise Data Warehouse-Business Filers Model) and EDW-IFM (EDW-Individual Filers Model), previously used by IRS for compliance research.

JOB NUMBER

N1-058-08-

Description:

This system is a consolidated source of read-only taxpayer data for IRS business applications that perform case identification, selection, prioritization and delivery.

a. Inputs:

EDAS-IPM receives electronic transfers of extracts from various IRS sources, including the BMF (Business Master File), IMF (Individual Master File), CAWR (Combined Annual Wage Reporting), DM-1 (Data Master-1), EPMF-DB2 (Employee Plan Master File-DB2), IRMF (Information Returns Master File), and PMF (Payer Master File).

Disposition: Recordkeeping copies of this data are appropriately scheduled under other IRS authorities for specific systems and/or sources providing input.

b. System Data:

Extracts of core IRS business and individual taxpayer data in support of one central research repository. Data includes forms and filer return information, tax modules, entity transactions and statuses, taxpayer identification, wage-related documents, asset and liability information, deductions, and exemptions.

Disposition: Temporary. Delete when no longer needed or after 1 year, whichever is earlier.

c. Outputs:

Queries performed against the data by different IRS business units and functions for trend and program analyses, case inventory selection.

Disposition: Temporary. Delete/destroy when superseded or no longer needed.

d. System Documentation:

Codebooks and user guides.

Disposition: Delete/destroy when superseded or obsolete.
