1.

Mammography X-rays consist of exposed X-rays of the breast. X-rays are produced for diagnostic purposes and they form the basis for determining a course of treatment. A typical X-ray is examined and a report is prepared to document the findings of that examination. Mammography X-rays are filed in the same manner as other X-rays, i.e., they are filed in jackets according to patients' names and Social Security Numbers.

Disposition: Destroy 10 years after date of last exposure and after a report has been filed in the patient's medical record folder.
