Schedule Number: N1-142-86-012

All items in this schedule are inactive. Items are either obsolete or have been superseded by newer NARA approved records schedules.

Description:

This single-item schedule was superseded by N1-142-10-001, item 11c1

Date Reported: 07/28/2022
I hereby certify that I am authorized to act for this agency in matters pertaining to the disposal of the agency's records; that the records proposed for disposal in this Request of 2 page(s) are not now needed for the business of this agency or will not be needed after the retention periods specified; and that written concurrence from the General Accounting Office, if required under the provisions of Title 8 of the GAO Manual for Guidance of Federal Agencies, is attached.

A. GAO concurrence: ☐ is attached; or ☒ is unnecessary.

<td>DEFERRAL DISPOSITION RECORDS - Hartsville Nuclear Plant; Phipps Bend Nuclear Plant; Yellow Creek Nuclear Plant</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

These records consist of information related to the total design process of nuclear plants whose completion was deferred and ultimately cancelled. There are 1075 cubic feet of records dating from 1972 to 1984, consisting of incomplete design information, marked up 1/2-size TVA and vendor prints, drafts, incomplete or previously microfilmed calculations, printouts used for scheduling and tracking purposes, vendor correspondence, deferral disposition packages and other documents already included in TVA records systems.

Documentation associated with the design and construction of these nuclear plants became associated with different functions upon the plant's deferral and cancellation (See the attached cancellation decision documents. The documentation was to facilitate possible restart options and to support investment recovery efforts.

These records were not:

- used to make the decision to cancel the nuclear unit(s);
- used to document the decision making process;
The nuclear plants originated most of the records. Vendors, requisitioning organizations, and construction originated the remainder. At deferral, all of the documentation became the responsibility of the Deferral Nuclear Units Project (BNP) and then the Investment Recovery Project (IRP).

The deferral documentation includes working files, drawing prints, and deferral disposition packages. In the case of all three types of documents, any record material was preserved through appropriate documentation systems so that these deferral files do not consist of any record materials.

DISPOSITION:

Destroy when plant is cancelled and documentation is no longer required for investment recovery, typically not to exceed one year after cancellation of plant.
