VII.4 RESERVOIR OPERATIONS SUPPORT FILES

The Reservoir Operations Section in the Water Resources Operations Department maintains files which document the daily operation of TVA's reservoir system. This information is used by Reservoir Operations to plan daily operations, answer inquiries, prepare briefs for litigation, and prepare operational summaries for upper management and technical/public presentations. Examples of information in the files are construction computations, correspondence on drownings, boating accidents, complaints, floods, litigations., etc. These records are referenced weekly and during critical times, such as major floods, are referenced around the clock. Some of this information is located elsewhere but it would be almost impossible to reconstruct the life of a reservoir without these support files. The records are filed by reservoir or dam and the records within each file are filed chronologically. Each file is a complete history of a particular reservoir or dam from initial acquisition or construction to present day.

There are approximately 45 cubic feet of these records dating from 1933 to present. The estimated annual accumulation is 4 cubic feet.

Upon approval of this schedule these records will be filmed in accordance with the standards set forth in 36 CFR Part 1230 and will be maintained on microfiche.

DISPOSITION

A. Paper

Destroy when acceptable microfiche has been obtained.

B. Microfiche

Maintain until reservoir system is retired.
