CORRESPONDENCE FILES FOR ENERGY RESOURCE PLANNING AND ENGINEERING DEPARTMENT

These correspondence files are created, received, and maintained by Customer Group's Customer Planning Operations, Resource Planning Division, Energy Resource Planning and Engineering Department, in the conduct of substantive, primary functions for which it is responsible. Customer Planning provides the link needed between TVA's Generating and Customer Groups to meet present and future power supply needs of TVA customers. Resource Planning includes load forecasting, power system planning, and power billing and analysis. The Energy Resource Planning and Engineering Department (ERPED) performs cost studies for long-term energy supply. Information sources for these studies consist of vendors, contractors, conferences, technical papers, magazines, EPRI Net, the TVA Corporate Library, information discussions, etc. ERPED receives both internal and external inquiries, and often prepares responses for the TVA Board of Directors. In preparing these studies and answering inquiries it is often necessary to reconstruct the sources of prior studies and, for that reason, backup correspondence which often includes handwritten notations must be available.

Some, but not all of these records are filmed into RIMS. They are filed by project and date and held together in a case file. These files date from 1979 and are continuing. Seventeen cubic feet have been transferred to the Chattanooga Records Center.

DISPOSITION

- A. Records essential to the execution of the delegated program responsibilities, including historical calculation data.

PERMANENT.

Break file every two years and transfer to the Records Center. *Transfer to NARA*
~~Destroy in agency when program is discontinued.~~ *Destroy in*
when 10 years old except 1979-1992 transfers
in 2002.

- B. Records of minor, routine functions of the program not essential to the execution of the program responsibilities.

Destroy in agency when no longer needed for administrative purposes, not to exceed 5 years.

- C. Administrative files accumulated by individual offices relating to internal administration or housekeeping activities of the office rather than the functions for which the office exists. In general, these records are routed for informational rather than record purposes; they are not required to complete other files of the organization; they do not contain records directly related to and essential to the organization's delegated program responsibilities nor policy and procedural records not filed as record elsewhere in the agency.

Destroy in agency when 2 years old or when no longer needed, whichever is sooner.

Note: Routine administrative and facilitative records, records covered by the GRS and non-record items in IA may be destroyed during archival processing without further concurrence of the agency.

QUANTUM METER OUTAGE REPORT

Form TVA 4694, Quantum Meter Outage Report, is completed by Customer Service Center (CSC) personnel at the meter site while testing the meter. The signed original is sent to Power Billing Analysis (PBA) with a copy retained by CSC. PBA uses the information on the form in the power billing analysis system.

The report records the time the meter is taken out of service and the time it is placed back in service. The kWhs and kVARs entered on the report are used to estimate the energy used while the meter was being tested. This estimate is factored into the amount of power billed to the customer.

We recommend a retention period of 7 years in order to substantiate customer billing adjustments made based on the outage report.

DISPOSITION

A. Original:

Destroy when 7 years old.

B. Copies

Destroy when no longer needed, not to exceed 2 years.
