Some of the information contained in these files dates back to some of the earliest engineering and construction activities by TVA. These files consist of project authorizations, job scopes, equipment part specifications, and vendor information for ordering replacement equipment. These files could include test reports, sketches, and warranty information. This series of records includes vendor manuals with drawings, specifications, and information related to equipment replacement parts under this contract and vendor. These records are filed by contract number and project identification.

These records are valuable to TVA for reference and use when a replacement part is needed for a piece of equipment. This could result in downtime at our plant sites if this information were not available. There are approximately 1,152 cubic feet of records stored at the Chattanooga Records Center. These files are retrieved on a weekly basis. Information concerning this project is currently issued and added to these files. These records need to be accessible to selected employees around the clock for emergencies (such as equipment failure) at a particular project.

DISPOSITION
Destroy when plant is retired from TVA system.

Cut off when TVA vacates plant and transfer to new custodian for use of plant; otherwise destroy when no longer needed.

See 10/24/97 email from TVA.

Paul Jennings
