These records are final summary estimates with original supporting work papers and design sketches which provide backup data from various organizations within the Office of Engineering Design and Construction. EDB is considered the "lead" organization and compiles these inputs into the estimate forms which form the basis for suborders by which other TVA organizations request engineering design and procurement services and provide funds for such services.

These records are used in substantiating man-hour requirements, cost requirements, completion of engineering work, or in determining reasons for cost overruns. They are also useful in preparing other estimates for projected work which is similar to work done on earlier projects.

Actual experience has shown that these records are used for 20 years after a project is completed. The following retention period will satisfy all TVA requirements:

20 years after project is completed.

9/8/75 Assistant TVA Archivist
