7. ITEM NO.	8. DESCRIPTION OF ITEM (With Inclusive Dates or Retention Periods)	9. SAMPLE OR JOB NO.	10. ACTION TAKEN
1	<p align="center"><u>RESERVOIR AND STREAM SURVEY DATA</u></p> <p>The stream and reservoir survey data are obtained by actual field collection operations on streams and reservoirs in the Valley area using standard survey techniques, such as: electrofishing, hoop netting, rotenone, gill netting, and impingement. Larval sampling data are also compiled on these data sheets. This information on population count, species, etc., is needed to support branch fisheries management programs and establish the structure and quantity of the fish community at existing and prospective power development sites on Valley reservoirs--past, present, and potential sites. These data also support reservoir management problems that occur at power plants.</p> <p>The original data sheets are created in the Eastern and Western Area field units of the branch and are maintained in the office of the Biological Interpretation Group, Fisheries and Aquatic Ecology Branch. The original data sheets will be destroyed when the accuracy of the microform is verified.</p>
