1. Contract Procurement Statistical Data

Contract procurement statistical data is used to identify commodity purchases from specific companies and includes information such as vendor name, commodity type, and price. Recording this data began in 1954 and continued until 1961 by the process of obtaining information from the original contract and storing it on punch cards for producing a computer printout. Since 1961 the information stored previously on punch cards as well as all current contract information is keyed to magnetic diskette then processed and stored in a magnetic tape master file. This master file serves as the official record of the Division of Purchasing for statistical purposes. Organizations within TVA (e.g., Office of the General Counsel), other Government agencies (e.g., Internal Revenue Service and Federal Procurement Data System), and outside industries request procurement related data which is obtained from the magnetic tapes and is assured quick access by the retrieval arrangement of vendor name or commodity type.
