D SIGNATURE OF AGENCY REPRESENTATIVE
Ronald E. Brewer
E TITLE Assistant TVA Archivist

QUALITY ASSURANCE RECORDS

This records series consists of records documenting the procedures and standards by which the Sequoyah and Watts Bar Nuclear Plants were constructed and attesting to the quality of work done including the fabrication and installment of equipment. Documentation in this series includes but is not limited to, the following types of information:

- Inspection and Test Records
- Certificates of Compliance
- Mill Certifications
- Nonconformance Reports
- Support Modification Requests and Support Variance Sheets
These records are created and received on the construction sites and must be maintained in compliance with Nuclear Regulatory Commission requirements and with standards prescribed by the American National Standards Institute.

These records will be microfilmed on 16 mm roll microfilm with the index for each cartridge filmed at the beginning of each roll. Documents not suitable for microfilming will be retained in hard copy and referenced on the film by a document location notice. As applicable systems and structures are turned over to the Office of Power, the documents not suitable for microfilming, a microfilm copy of records, and the hard copy index to filmed and unfilmed records will be transferred to the Division of Nuclear Power.

These records have potential legal value should there be any problems at the plants after construction has been completed and during operation. Because of administrative reference needs and compliance with 10 CFR 50 and ANSI N45.2.9-1974, the following disposition is requested:

DISPOSITION

A. Hard Copy - Destroy in Agency when microfilm is verified. 1000 cu ft in existence

B. Microfilm

(1) OEDC Record Copy - Destroy when facility is retired. (Transfer to National Underground Storage immediately after microfilm is verified.)

(2) Reference Copies - Destroy in Agency when no longer needed for reference.
