1.	Reservoir Flood Information The file consists of observed data, computations, statistics, and correspondence on controlled floodwaters which are regulated by each TVA reservoir on the Tennessee River. The information was gathered by Flood Protection Branch (formerly Flood Hazard Analysis Branch, 1981-84; and Flood Control Branch, 1933-81) staff engineers through field surveys and observations. The information includes maximum observed water elevations and discharges; aerial and temporal distribution of flood runoffs; and all elements pertinent to the control and prevention of overflows of the Tennessee River at each TVA reservoir project. The information gathered has been used in the planning of the TVA reservoir system. When the projects are completed, the information obtained is used as reference for periodic project evaluations (which are necessary in the operation of the projects and when discrepancies concerning flood protection of surrounding lands occur) or alterations needs			
All changes to this proposed schedule have been approved by:				
<u>Richard Williams</u>	<u>11/5/85</u>	<u>Ronald E. Brewer</u>	<u>1-14-86</u>	<u>item</u>

	<p>which may come about (at present, no alterations to the projects have occurred, but in the event the need occurs these records will be an essential source of reference).</p> <p>The Reservoir Flood Information provides a historical summary of the construction and operational functions at the TVA reservoirs. The information is referenced but is not documented in its entirety in any other study of the TVA reservoirs nor is it documented in any other Federal agency. There is no routine accumulation of the records. Occasionally information concerning an occurred flood is added to the file. Annual accumulation is less than 1 inch. Current accumulation is 18 cubic feet since the late 1930's.</p> <p>DISPOSITION:</p> <p>Permanent. Offer to NARS when program is discontinued. Maintain in creating office. Destroy when no longer needed for administrative use.</p>
