

REQUEST FOR RECORDS DISPOSITION AUTHORITY (See Instructions on reverse)		LEAVE BLANK (NARA use only)	
TO NATIONAL ARCHIVES and RECORDS ADMINISTRATION (NIR) WASHINGTON, DC 20408		JULY NUMBER 11-255-10-4	
1 FROM (Agency or establishment) NASA Aeronautics and Space Administration		DATE RECEIVED 4-8-2010	
2 MAJOR SUBDIVISION NASA Headquarters		NOTIFICATION TO AGENCY	
3 MINOR SUBDIVISION		In accordance with the provisions of 44 U.S.C. 3303a the disposition request, including amendments, is approved except for items that may be marked "disposition not approved" or "withdrawn" in column 10	
4 NAME OF PERSON WITH WHOM TO CONFER Patti F Stockman, NASA Records Officer	5 TELEPHONE (202) 358-4787	DATE	ARCHIVIST OF THE UNITED STATES
		<i>Patterson</i>	<i>[Signature]</i>

6 AGENCY CERTIFICATION
I hereby certify that I am authorized to act for this agency in matters pertaining to the disposition of its records and that the records proposed for disposal on the attached 8 page(s) are not now needed for the business of this agency or will not be needed after the retention periods specified, and that written concurrence from the General Accounting Office, under the provisions of Title 8 of the GAO Manual for Guidance of Federal Agencies, is not required, is attached; or has been requested

DATE DEC 24 2009	SIGNATURE OF AGENCY REPRESENTATIVE <i>Patti F Stockman</i>	TITLE NASA Records Officer, NASA Headquarters
---------------------	---	--

7 ITEM NO	8 DESCRIPTION OF ITEM AND PROPOSED DISPOSITION	9 GRS OR SUPERSEDED JOB CITATION	10 ACTION TAKEN (NARA USE ONLY)
	See attached proposed schedule revision		

101-117	PROGRAM AND PROJECT RECORDS			
<p>What items 101-117 cover. These items designate appropriate retention of NASA program and project records produced through compliance with NPD/NPR 7120 series directives, or other authorized project management requirements documents. It provides for permanent retention of substantive and historically significant records and temporary retention of other records until the Agency no longer needs them. The terms "program" and "project" are defined in the current versions of NPD 7120.4 and NPR 7120.5. This schedule applies to all activities performed as part of programs/projects whether designated "tasks," "work packages," or other terminology.</p>				
<p>What items 101-117 do not cover. Records generated by some supporting activities such as procurement, financial management, property and supplies, personnel administration, and legal and patent issues are covered by other NASA records schedules. Program/project records within electronic systems (e-systems) are covered by this schedule. However, inputs, outputs, and system documentation for program/project e-systems are not covered. (See Note 5 for further information.) Questions about which schedules apply to specific records should be addressed to the Center Records Manager.</p> <p>Office(s) of Record. As used in these items, Office of Record refers to that office holding the official record copy of a specific record when multiple copies are used across offices, projects and centers. This is generally the office that creates and maintains the record, although other specific offices may be designated, when appropriate, to hold official program/project records. In some cases there may be more than one official copy of a record when it has separate independent functions in different organizations.</p> <p>Media. Items 101-117 cover records in any and all media, in any and all formats including Web content, and produced using any and all tools. Records may include, but are not limited to, word processing documents, presentation materials, statistical data, test data, spreadsheets, databases, e-messages (this includes e-mail), photographic materials, audio materials, film and video materials, drawings, and artwork.</p> <p>How to use the Notes. After determination of the type of program/project the records relate to, use the notes to assist with further retention selection. Notes 1, 2, and 3 list documents perceived to have permanent, long-term temporary, or short-term temporary value, respectively. These lists are intended to be inclusive rather than exclusive. They are to assist in selection, not to preempt selection. Program/project staff must exercise case-by-case judgment to ensure that permanent records are identified and retained while other records are destroyed appropriately. In cases of doubt about what item to apply, users of this schedule should contact their Center Records Manager.</p>				
Item	If the records pertain to	and consist of	which are	then the records are
101	<p>programs/projects relating to both manned and unmanned space flight, aerospace technology research, and basic or applied scientific research AND meeting one or more of the following criteria: are "first of a kind," establish precedents, produce major contributions to scientific or engineering knowledge, integrate proven technology into new products, or are/have been subject of widespread media attention or Congressional scrutiny.</p>	<p>records essential for understanding the history of a program/project from inception to completion defined by the stages in program/project's life. Note 1 contains a list of eight stages and potential records that might be created in each.</p>	<p>held at office of record</p>	<p>permanent. Cut off records at close of program/project or in 3-year blocks for long term programs/projects. Transfer to National Archives 7 years after cutoff. Special media records will be transferred in accordance with 36 CFR § 1228.270 1235.44-50 (electronic records), 36 CFR § 1228.266 1237.28 (audiovisual records), 36 CFR § 1228.268 1235.42 (cartographic and architectural records), and/or current transfer instructions specific to individual formats. < N1-255-04-3 ></p>

NOTE: NASA HAS AGREED TO TRANSFER PERMANENT AUDIO/VISUAL RECORDS 5 YEARS AFTER CUT-OFF.

102			all other copies	temporary Destroy/delete when no longer needed <N1-255-04-3>
103		records not required for documenting the history of the program/project as described in item 101, but which have operational value to the Agency Note 2 contains examples that might be created in each program/project stage	held at office of record	temporary Cut off records at close of program/project or in 5-year blocks Destroy/delete between 0 and 30 years after cutoff See Note 4
104			all other copies	temporary Destroy/delete when no longer needed <N1-255-04-3>
105		all other routine records that are not considered to be essential for on-going operations of the program/project Note 3 contains a list of records that may be included	held at office of record	temporary Destroy/delete when between 0 and 15 years old Do not retain longer than life of program/project plus 5 years See Note 4 <N1-255-04-3>
106			all other copies	temporary Destroy/delete when no longer needed <N1-255-04-3>
107	programs/projects that do not meet the criteria stated in Item 101	records of programs/projects that have operational value to the Agency Notes 1 and 2 contain listings of records that may be included	held at office of record	temporary Destroy/delete between 0 and 30 years after program/project termination See Note 4 <N1-255-04-3>
108			all other copies	temporary Destroy/delete when no longer needed <N1-255-04-3>
109		all other routine records that are not considered to be essential for on-going operations of the program/project Note 3 contains a list of records that may be included	held at office of record	temporary Destroy/delete when between 0 and 15 years old Do not retain longer than life of program/project plus 5 years See Note 4 <N1-255-04-3>
110			all other copies	temporary Destroy/delete when no longer needed <N1-255-04-3>

Item	If the records pertain to	and consist of	which are	then the records are
111	hard copy originals used to create imaged record copy on microfilm or electronic media	by definition duplicate materials because record copy is retained in another medium	held anywhere	Item Discontinued Records now covered by GRS 20 Item 2
112	electronic copies of records created using electronic mail, messaging systems, paging systems and word processing applications and used solely to generate a recordkeeping copy of the records covered by the other items in this schedule Also includes electronic records created and maintained for the purpose of updating revising or disseminating	copies that have no further administrative value after recordkeeping copy is created for retention under items 101, 103, 105, or 107 Includes copies maintained by individuals in personal files, personal electronic mail directories, or other personal directories including those on hard disk, network drives, shared drives, and all other electronic applications that are used only to produce the recordkeeping copy	held anywhere	Item Discontinued By definition these are "all other copies"
113		copies used for dissemination revision or updating that are maintained in addition to the recordkeeping copy	held anywhere	Item Discontinued By definition, these are "all other copies"
114	Program/project records that clearly apply to (or cover) more than one program or project Such records might include, but are not limited to, technical standards/multi-program/project common use documentation, certain test stand data, etc	records which, if of an individual program/project, would be described by item 101	Held at office of record	permanent Cut off records at close of last applicable program/project or at any time in 3-year blocks Transfer to National Archives 7 years after cutoff Special media records will be transferred in accordance with 36 CFR § 1228-270 (electronic records), 36 CFR § 1228-266 (audiovisual records), 36 CFR § 1228-268 (cartographic and architectural records), and/or current transfer instructions specific to individual formats
115			All other copies	temporary Destroy/delete when no longer needed
116		records which, if of an individual program/project, would be described by items 103 or 107	Held at office of record	temporary Destroy/delete between 0 and 30 years after termination of last applicable program/project
117			All other copies	temporary Destroy/delete when no longer needed

Covered by GRS 20 Item 2

Covered by GRS 20 Item 14

14-50
1235.28
1235.42

Note 1 Records covered by Items 101, 102, 107 and 108 potentially created in the stages of a project/program's life are those essential for future studies of a program or project This list is neither all-inclusive nor all-exclusive, it must be applied based on value judgments by those familiar with a program/project's development and accomplishments Included are

Records created at multiple stages

- * Agendas, minutes and briefing materials of substantive meetings
- * Budget and actual cost data (final figures)
- * Configuration management control documentation including Class I change requests and dispositions (e.g., changes that impact form, fit or function)
- * Correspondence, memos, e-messages, photographs, and presentation materials of a substantive nature
- * Directives
- * Hazard, risk and safety analyses/assessments
- * Independent and non-advocate reviews and assessments
- * Material from major milestone and peer reviews including, but not limited to concept, preliminary design, critical design, design certification, mission readiness, configuration, program/project requirements, and system requirements
- * Mission success criteria
- * Newsletters and bulletins
- * Partnering agreements
- * Press releases
- * Products of collaborative tools used to track or facilitate progress
- * Program/project plans, including annual Program Operating Plans
- * Public relations materials
- * Requirements documents including baseline system, data, software, interface, integration, testing, design, operations, performance, science and acceptance
- * Specifications, drawings and associated lists used for hardware manufacture/fabrication, and related finding aids
- * Testing and Operations Plans (i.e. verification, integration, handling, transportation, storage, support systems, facilities, logistics, qualification, quality, reliability, acceptance, and science)

Formulation Records defining scope, objectives, technical performance requirements, cost, and schedules of program/project prior to initial formal approval, including

- * Announcements of opportunity (including research opportunity)
- * Art work and drawings produced to illustrate concepts or designs
- * Concept/configuration options and decision packages
- * Concept definition documents
- * Estimates of budget and schedule options
- * Infrastructure and program/project needs assessment
- * Mission needs statement, and other mission needs documents
- * Preliminary configuration layouts
- * Preliminary operations plans
- * Procurement/acquisition plan
- * Program/project formulation authorizations
- * Requests for proposals
- * Statements about analysis of program/project value
- * Studies of available technology, conceptual options, feasibility trades, and sensitivity
- * Technology availability/readiness assessments

Approval Records documenting program/project as initially approved, and subsequent changes resulting from iterative process of defining concepts and requirements, including

- * Approval status tracking and control files
- * Authorization/approval documents
- * Commitment agreements
- * Evaluation reviews
- * Intra-NASA center and external memoranda of understanding or agreement

Design development Records containing comprehensive information about design and development process, requirements, products, performance, and review, including

- * Design and development plan
- * Design concept verification studies and reports
- * Operating plan
- * Verification of design concept studies and reports

Manufacture, fabrication and assembly Records that provide significant documentation of the construction, final assembly, and acceptance of as-flown hardware or as-operated ground-based experiments and any major changes to the original approved design, including

- * Acceptance and end item review materials / packages for hardware eligible for museum display
- * Configuration inspection reviews
- * Manufacturing plans

Pre-launch system integration and verification Records that provide significant documentation of the process used to verify that a spacecraft is ready for launch, or a ground-based experiment is ready for operation, including

- * Certification reports
- * Flight readiness review materials
- * Operations plans for testing, integration, calibration, interface, and reliability
- * Requirements documents for testing and verification
- * Test and operations plans verification, integration, handling, transportation, storage, support systems, facilities, logistics, qualification, and quality/reliability
- * Test readiness review materials
- * Verification plans

Implementation and operations Records that provide significant documentation about how a mission/experiment was conducted, including

- * Anomaly reports
- * Engineering and operations manuals
- * Engineering data necessary to establish operation of technical sub-systems
- * Final versions of specifications, drawings, associated lists and related finding aids used for manufacturing/fabrication
- * Flight crew and mission controller reports or notes, audio tapes and imagery
- * Flight data files and timelines
- * Flight procedures manuals
- * Imagery in any format of mission operations
- * In-flight or on-orbit anomaly investigation reports and flight notes
- * Standards

Observational data Records containing physical sciences observational data created by both space- and earth-based platforms that are unique and cannot be extrapolated from other data sets or observations at a reasonable cost, including

- * Copies of definitive data sets
- * Copies of processed data and metadata, their analyses, proposals for analysis, and related finding aids
- * Instrument operations
- * Laboratory notebooks and logbooks
- * Proceedings
- * Studies and reports

Evaluation and termination Records documenting results of program/project, specific manned or unmanned flight or experiment upon completion, including

- * Analyses of mission results

- * Final mission or experiment reports
- * Lessons learned studies
- * Mission/experiment reports (preliminary and final)
- * Mission failure or accident investigation records
- * Publications and conference proceedings
- * Restart notes
- * Substantive notes of scientists and other personnel not incorporated in other records
- * Summaries of accomplishments and problems
- * Termination notifications and related justifications

Note 2 Records covered by Items 103, 104, 107 and 108 potentially created in the stages of a project/program's life are those essential for continuing operations and technology transfer. This list is neither all-inclusive nor all-exclusive, it must be applied based on value judgments by those familiar with a program/project's development and accomplishments. Included are

Records created at multiple stages

- * Configuration management control documentation including change requests and dispositions other than those listed in Note 1
- * Correspondence, memos, and e-messages related to any records described in Note 2
- * Interface control documents
- * Minutes of all Program Control Boards
- * Open action tracking files not included in major milestone review documentation
- * Periodic reports, status reviews and presentations whose substance is captured in major milestone reviews (see Note 1, Records created at multiple stages)
- * Problem reporting and corrective action reports
- * Quality assurance audit reports
- * Specifications and drawings of superseded systems with no historic interest, and related finding aids
- * Waivers
- * Work instructions and work authorization documents

Formulation, including

- * Audits
- * Concept verification testing data
- * Environmental impact studies
- * Technical evaluations of proposals
- * Technology readiness demonstration results

Approval, including

- * Configuration audits
- * Failure modes analyses
- * Preliminary budget and cost estimates and studies
- * Preliminary design documents
- * Safety analysis reports
- * Work breakdown documents

Design development, including

- * Contract End Item (CEI) specifications redundant to the specifications in Note 1, Design development
- * Design performance analyses
- * Design reviews whose substance is captured in major milestone reviews (Note 1, records created at various stages)
- * Design verification testing data
- * Test data developed for verification studies

Manufacture, fabrication and assembly Records not included in Note 1 that are useful for identification, correction, and/or

investigation of performance problems or mishaps, but not needed after hardware is no longer in NASA inventory, including

- * Acceptance data packages including test procedures and results for hardware not suitable for museum display
- * Audits
- * Engineering test and evaluation data
- * Final contract deliverable technical data requirements (complete set)
- * Hardware vendor lists
- * Material and parts lists
- * Qualification of flight hardware, test plans, and results
- * Quality and reliability test plans and results
- * System acceptance review documents

Pre-launch system integration and verification Records not included in Note 1 that are useful for identification, correction, and/or investigation of performance problems or mishaps, but not needed after hardware is no longer in NASA inventory, including processing documents for spacecraft, payloads, or experiments such as

- * Discrepancy reports
- * Engineering support requests
- * Field engineering changes
- * Flight certifications
- * Modification instruction packages
- * Operations readiness review materials
- * Payload processing and integration
- * Pre-flight or pre-experiment test and verification data
- * Pre-ship review materials
- * Safety and mission assurance documents
- * Safety reviews
- * Test and assembly procedures
- * Test preparation sheets
- * Verification/validation of flight/test software

Implementation and operations Records not included in Note 1 that are useful for identification, correction, and/or investigation of performance problems or mishaps, but not needed after hardware is no longer in NASA inventory, including

- * Commands
- * Launch operations data
- * Principal investigators' user guides

Observational data Records that do not meet the criteria for observational data described in Note 1, in particular data generated by engineering tests to verify theories, design concepts, etc , including

- * Derived data sets
- * Engineering data necessary to establish operation of instruments
- * Raw experimental, observational, or engineering data (Exception raw data determined by NASA management to have continuing value may be retained beyond 30 years until reference use ceases)

Note 3 Records covered by Items 105, 106, 109 and 110 potentially created in the stages of a project/program's life have only limited short-term value They include but are not limited to

- * Action items from technical interchange meetings or management reviews not considered major milestones
- * Budget and actual cost data (working files, for final figures see Note 1)
- * Copies of presentation material maintained for personal reference containing no substantive notes
- * Internal center memoranda of understanding or agreement
- * Products of collaborative tools relating to administrative matters
- * Routine correspondence, e-messages, agendas, minutes

- * Small purchase justifications and related documents not maintained in official procurement files
- * Trip reports

Note 4 Retention period for records relating to environmental protection, OSHA or other regulatory requirements should be lengthened as required by applicable state legislation

Note 5 Reference schedule 2 for description and retention of inputs/outputs to, or documentation for program/project e-systems For inputs in any format, use schedule 2, items 15B1, 15B2 and 15B3, as appropriate For outputs in any format (e.g., summarized, extracted, and/or downloaded e-files and printed copies), use schedule 2 items 15D, 15E, 15F, or GRS 10/12, as appropriate

Proposed change to Schedule 8/10 Retention to reflect that some Configuration Management are temporary in nature.

Current ITEM DISCONTINUED RECORDS NOW COVERED BY ITEM 8/101

Change to ITEM DISCONTINUED RECORDS NOW COVERED BY ITEM 8/101 or 8/103

ALSO need to change the CROSSWALK as found in Appendix E of the NRRS.

Current

8/10	Config Mgmt – Space Shuttle	101
------	-----------------------------	-----

Change to

8/10	Config Mgmt – Space Shuttle	101 or 103
------	-----------------------------	------------

Summary of Changes to Programs & Projects Records Retentions (12-1-2009)

1. Additional text was added to the introductory material in the “**What items 101-117 cover**” and “**What items 101-117 do not cover**” and the “**How to use the Notes**” sections for greater clarity
2. Under “**Office(s) of Record**” Changed sentence to “This is generally the office that creates and maintains the record, although other specific offices may be designated, when appropriate, to hold official program/project records ”
3. Under “**Media** ” Added “including Web content” to the text and combined e-mail with e-messages by adding “(this includes e-mails)” after the word e-messages
4. **Item 101.** The phrase “Transfer to records center storage” was removed from item 101 retention (It was suggested that we could “be silent” on that, so to avoid having to spell out all the different storage places as well as “near” or “far” for electronic retirement, etc We chose to be silent)
5. **Item 103** retention was changed to allow for the option of cutting off and dispositioning records early The retention band for items 103, and 107 was changed from “5-30” to “0-30” years
6. **Item 103** records description Removed “throughout the life of the program/project” to remove contradiction between the changes to the retention and the description of the records The key words to distinguish item 103 from 107 has to do with “operational value” not with whether the records have operational value throughout the life of the P/P For some long-running P/Ps, the operational value may cease long before the end of the P/P
7. **Item 107 records description** Removed “throughout the life of the program/project” for consistency with changes to item 103
8. **Items 105 and 109** The retention band for items 105 and 109 was changed from “2-15” to “0-15” years to be consistent with changes to item 103
9. **Items 111-113** According to our NARA representative, current items 111-113 are no longer required by NARA (now that they have GRS 20 in place) and so they were discontinued and grayed-out Requirements for hardcopy documents are covered in GRS 20 item 2 (Also, the text in section I 7 in the current NPR 1441 1 tells us to use GRS 20)
10. **Items 114-117** Multi-program/project record retention schedules were added for both permanent (items 114-115) and temporary (items 116-117) records (See justification below)
11. **Under new item 114** In the description, added “Such records might include, but are not limited to,” for clarification In the retention added “at any time ” **RATIONALE** For clarification and permission Records can be cut off “at any time” in 3 year blocks This can be regardless of when they become inactive (Remember that these are permanent records that must be transferred to NARA It might be better to pre-accession these so that NARA can manage the migration to newer technologies, etc)
12. **Under new item 116** Removed 105 and 109 from the description **RATIONALE** These items deal with records from Note 3 which are not considered as being “essential for ongoing operations ”
13. **Notes sections.** Some editing and formatting were done in the Notes section (such as spelling, alphabetization, alignment of paragraphs, etc), some text was added for clarification, and the duplicate exception under Note 2 Observational data was deleted

Summary of Changes to Programs & Projects Records Retentions (12-1-2009)

- 14 **Notes 1, 2 and 3** “E-mail” was changed to “E-messages” RATIONALE Due to the new technologies out there today (and in the future), it was suggested that we change “e-mail” to “e-messages” in this draft E-messages is a broader term which includes e-mail as well as other more modern technologies and ways of communicating

[It was also suggested that a comment or definition be added at the beginning of NPR 1441.1 (in the intro material) that said something to the effect that “e-mail” as used in these schedules includes any type of e-message This would prevent us from having to change “e-mail” throughout the whole document]

15. **Note 1**, in the second bullet under “Observational data,” “and” was removed for clarity and text was changed to “their analyses” for agreement with plural aspects of “datae”

16. **Note 1**. Added bullet “Configuration management control documentation including Class I change requests and dispositions (e.g., changes that impact form, fit or function)”

[We also propose changing the wording for NRRS 8/10 retention and Appendix E crosswalk for CM records to point to items 8/101 or 8/103e]

- 17 **Note 5** was added for information pertaining to other records relating to electronic systems that house P/P records

Draft NEW schedules with respect to Multi-Program/Project common use records.

JUSTIFICATION

Some records are used by more than one program/project and have the potential for being retired more than once thus duplicating records management costs and possibly future research efforts, etc The records are not easily separated to a specific (or even a predominate) program or project with which to retire them An example of this is the multiprogram/project common use documentation This documentation includes things like standards, specifications, handbooks, procedures, etc that have a common base across all types of programs/projects

Some records are needed past their scheduled retention because they can be used for other programs/projects An example of this type might be the special test stand configuration records that are needed for the life of the test stand, not just the life of a program/project These records are different than the “brick and mortar” facilities-type records that are scheduled elsewhere in schedule 8 They document tests performed and special test stand configurations for those tests Other records may need to be kept for trending across programs/projects, etc

It is believed that a multiprogram/project “bucket” will better serve these records than trying to apply the current schedules which require a termination point of a specific program/project

*[It should be noted that these draft multiprogram/project schedules are **NOT** meant to replace the process for transfer of records from Shuttle to Constellation/Ares, or other such transfer of records from one ending P/P to a new P/P that might be doing similar work [That process has been defined and a special transfer form was created to document the process] They are rather for collections of records that are required for use by more than one P/P such as technical standards, special test stand configuration records, some safety records that are used for trending across programs/projects, or certain propulsion records that cross multiple programs/projects]*

Summary of Changes to Programs & Projects Records Retentions (12-1e2009)

Further explanation of some of the changes:

Draft change NRRS 8/103 to allow for early disposal of Program/Project records no longer needed.

JUSTIFICATION

- **Efficient use of available current resources to deal with no-longer-needed temporary records**
Because of the huge amount of no-longer-needed temporary records that Shuttle projects currently hold and the scheduled loss of Shuttle personnel at the close of the Program next year, waiting until the end of the Shuttle program (or years afterward) to disposition this huge volume would undoubtedly result in an unnecessary delay in Shuttle records dispositions and a probable cost hardship due to unavailability of resources at the time records come due for destruction
- **The records are no longer needed and personnel to deal with them are available now.** The records in question, as far as the SSP Projects are concerned (and their management will attest), are no longer needed, and the personnel needed to process this huge volume are available now, but will not be two years from now
- **Previous retention schedules allowed for scheduling records based on “years old” retentions.** While the current records schedule allows for the archival of permanent records before the end of the Program/Project, it (inadvertently) dropped the ability to destroy temporary records before the end of the Program/Project. This draft proposes a return to a Project Office’s ability to schedule temporary records based on “years old” in addition to “years-after-project ”
- **A new schedule is not needed, only an amendment to existing language in NRRS 8/103.** We believe the proposed change to NRRS 8/103 is absolutely necessary to effectively schedule and disposition some P/P records in a timely manner

Draft changes to Notes 1 and 2 with respect to configuration management records.

JUSTIFICATION:

Clarification of current records retention schedule for Shuttle Program configuration management records is provided. Currently, AFS 8040 (NRRS 8/10 – a discontinued item) identifies Schedule 8/101 (Permanent) as the retention schedule for Space Shuttle Configuration Management files. However, note 2 of the new (current) schedule 8 indicates that configuration management files are temporary and places them in NRRS 8/103.

To provide for permanent preservation of the more significant CM records, Note 1 has been modified to elaborate Class 1 CM documentation, terminology pretty common across programs and projects. Clarifying text was added to the Note 2 entry for CM records signifying “other than those listed in Note 1 ”. NRRS 8/10 mapping and the crosswalk in Appendix E will be changed to point users to either Schedule 8/101 or 103.

Draft changes to Note 1 with respect to correspondence records.

JUSTIFICATION:

In Note 1, the entry for “Correspondence” is not in alphabetical order in the list for “Records created at multiple stages” since the word “Substantial” is the first word in that line. Yet in Note 2, the entry for “Correspondence” is in alphabetical order which makes it more prominent to the user (even though the caveat of “related to any records described in Note 2” is included). Because of this, the Note 1 listing has the potential to be missed and therefore correspondence may be automatically put in the Note 2 schedules and not considered for Note 1 schedules. By rewording the Note 1 entry, this oversight can hopefully be corrected.

Summary of Changes to Programs & Projects Records Retentions (12-1-2009)

Draft NEW Note 5 with respect to description and retention of inputs/outputs to, or documentation for program/project e-systems.

JUSTIFICATION:

The records retention schedules for electronic records systems are already outlined in schedule 2. There is no need to duplicate these with each retention. Therefore, the introductory text was edited to remind folks of the additional requirements and Note 5 added to point folks in the right direction (i.e., further information).

**NASA Electronic Systems/Applications with
Multi-Programs/Projects Records**

Center Name	Application Name	Acronym	Category number	Category name	If yes, which NRRS item?	Description / Purpose	Responsible Org
Dryden	Business Information Tracking System	BITS	8000	Programs & Projects	8/116 (new!)	Tracks cost and scheduling of WATR (Western Aeronautical Test Range) resources	M
Glenn	EDMP	EDMP	8000	Programs & Projects	8/114 and 8/116 [New]	An EDMP - (Experiment Data Management Plan) is a document that gives information about a flight experiment. Included in the document is contact information, a summary of the experiment, the results, and a catalog of all the data products collected and storage location. This site allows the Principal Investigator and Project Scientist for Space Flight experiment to enter the EDMP info for their experiment online. In addition, this site contains a way to index search past NASA microgravity flight experiments.	Ret/Fluid Physics and Transport Branch
Glenn	Escort Data System	ESCORT	8000	Programs & Projects	(8/116) schedule 8, items 101-110	MISSION ENVIRONMENT -- the Escort data systems provide for the real-time data acquisition, reduction, data management, and post processing of experimental data from the GRC facilities. WILL NOT USE NAMS	Data Systems Branch, Testing Division
Glenn	Risk Management Implementation Tool	RMIT	8000	Programs & Projects	8/116	RMIT is a web-based application developed to aid NASA project managers and project members in performing Continuous Risk Management	QEA

Goddard	Project Data Repository (Project DR)	DR	8000	Programs & Projects	NRRS 8/101 (or NRRS 8/114 or 8/116)	The Project Data Repository will replace the current repository, which houses data associated with NASA missions and instruments (i.e. tasks and sub-tasks) where GSFC is involved with the science and/or management of the operation. The system will give its users the ability to manage tasks and sub-tasks in a more user-friendly, accessible environment and with better efficiency. Users of the system will be authenticated via username and password following the security guidelines detailed in NPG 2810.1. Authorized users will have the ability to add a new task or edit an existing task, and all associated data fields into the database via their web browser. Users of the system will also have the ability to search the database by specifying criteria through an extensive search interface and create reports defined by the administrators of the system (e.g. monthly status reports, timeline reports showing milestones and phases for tasks and sub-tasks, etc.)	400
Goddard	Earth Observing Data and Information System	EOSDIS	8000	Programs & Projects	NRRS 8/101 8/114 or 8/116	The Earth Observing System (EOS) Data and Information System (EOSDIS) is a highly specialized, comprehensive distributed system designed to support NASA's EOS. EOSDIS archives, manages, and distributes Earth science data from NASA missions and science data processing for the EOS missions. EOSDIS has been archiving and distributing pre-EOS data since 1994. Currently, EOSDIS supports both the pre-EOS and EOS data. EOSDIS distributes NASA's Earth Science data to a broad user community, enabling research, applications, education, and policy analysis.	423

Goddard	TEST AND INTEGRATION MANAGEMENT INFORMATION SYSTEM (TIMIS)	TM	8000	Programs & Projects	8/116 or 8/114	TIMIS is a web-based, platform-independent, interactive system developed for Code 540. It is used to process and track work directives from the initiation phase through the email approval cycle to completion of a work directive for the current test contract. This system provides the Code 540 a mechanism to maintain and track requirements, estimates, actuals, schedules, and costs for the test activities performed. It also imports the contractor's 533 and weekly data and creates the assessment files for SAP on a monthly basis.	549
Johnson	MIS Alert Log for Readiness Testing	ALRT	8000	Programs & Projects	8/116	ALRT came about as a result of the accident investigation. ALRT is used to document anomalies discovered during Operations Readiness Tests and H/W S/W Integration Tests.	DA8
