Agency Notice Intranet Database Management System

Agency Notice Intranet Database Management is a system used to provide ready, user-friendly access to frequently used information or notices in a "public" format. These notices are posted daily and read by anyone with access to the USAID intranet. M/AS/IRD maintains the electronic versions and the data. The Notice Database begins in 1995.

1. System Electronic Version and Data: Update on a daily basis.

Delete the monthly notices at the end of calendar year when **■** two years old.

2. Input records: Electronic versions of these files are downloaded from a word processing program. The files automatically link with unique database fields and remaining fields are manually completed with entered data. The manually completed fields assist the USAID reader by providing a brief description of the notice subject matter.

Destroy the electronic version when it has been entered into the database and verified.

3. System Documentation: Data, file and output specifications, and user guides.

Destroy when the system is obsolete or superseded.
