

NOTICE - SOME ITEMS SUPERSEDED OR OBSOLETE

Schedule Number: N1-412-95-004

Some items in this schedule are either obsolete or have been superseded by new NARA approved records schedules. This information is accurate as of: 09/07/2022

ACTIVE ITEMS

These items, unless subsequently superseded, may be used by the agency to disposition records. It is the responsibility of the user to verify the items are still active.

All other items remain active.

SUPERSEDED AND OBSOLETE ITEMS

The remaining items on this schedule may no longer be used to disposition records. They are superseded, obsolete, filing instructions, non-records, or were lined off and not approved at the time of scheduling. References to more recent schedules are provided below as a courtesy. Some items listed here may have been previously annotated on the schedule itself.

Item 1 was superseded by N1-412-09-012

Item 2 was superseded by N1-412-07-058 schedule 414

Item 3 was superseded by N1-412-07-058 schedule 429

Item 4c was superseded by DAA-0412-2016-0001-0001

EPA Records Schedule 368

Status: Final, 02/15/2007

i) **Title:** Ocean Data Evaluation System (ODES)

Program: Water

Applicability: Headquarters

Function: 108-023-02 - Water Monitoring and Forecasting

NARA Disposal Authority:

This schedule authorizes the disposition of the record copy in any media (media neutral), excluding any records already in electronic form. Records designated for permanent retention must be transferred to the National Archives in accordance with NARA standards at the time of transfer.

- N1-412-95-4/1

Description:

The Ocean Data Evaluation System (ODES) is used for storing and analyzing water quality and biological data from marine, estuarine, and freshwater environments. The system supports Federal, State, and local decision makers associated with marine monitoring programs, and managers and analysts who must meet regulatory objectives through the evaluation of marine monitoring information. ODES contains data from the National Estuary Program, the Great Lakes National Program Office, the Ocean Disposal Program, 301(h) Sewage Discharge Program, the National Pollutant Discharge Elimination System Program, and the 403(c) Program. Records pertain to water quality, fish abundance, bioaccumulation, benthic infauna, fish histopathology, bioassay, and sediment physical/chemical characteristics. Users can examine both spatial and temporal relationships among variables. A quality assurance report describing analytical methods and procedures for each data set is stored with each data set.

Disposition Instructions:

Item a: Electronic software program

- **Disposable**
- For each major version change, maintain current version following procedures required in NTSD's directives and procedures.

Item b: Input

- **Disposable**
- Follow instructions for EPA 171 - Input and Source Records.

Item c: Electronic data

- **Permanent**
- Transfer annually to the National Archives as specified in 36 CFR 1228.270 or standards applicable at the time.

Item d: Output and reports

- **Varies**
- File with related records and follow instructions for the related records.

Item e: Supporting documentation

- **Permanent**
- Transfer those records necessary to document how the system captures, manipulates, and outputs data to the National Archives as specified in 36 CFR 1228.270 or standards applicable at the time. This documentation is transferred along with the electronic data (item c).

Guidance:

This records schedule covers the ODES data files. Analysts and managers who use the system to support activities such as regulatory development or decision-making support should carefully consider whether the ODES information was an essential part of the decision-making process. If so, it will be necessary to document in the official file how ODES was used. This may be accomplished in one of several ways, such as by including a copy of the analysis, summary information, or a printout of the results in the official file, or by maintaining a copy of the data analyzed in electronic form.

The Storage and Retrieval Water Quality Data Base (STORET) is scheduled as EPA 400.

Reasons for Disposition:

System was identified in the National Academy of Public Administration's study of Federal data bases as a Category A system that should be accessioned by the National Archives as soon as possible.

U.S. EPA RECORDS CONTROL SCHEDULE

2) **SERIES TITLE:** Effluent Guidelines Studies (EFG)

PROGRAM: Water

EPA SERIES NO: 414X^H

NARA SCHEDULE NO. N1-412-95-4/2

APPLICABILITY: Headquarters

*Superseded by
version of 2/15/2007*

*See Sanku York email
of 10/22/2007*

IDENTIFYING INFORMATION:

DESCRIPTION: The Effluent Guidelines Studies (EFG) contain information collected on an industry-by-industry basis to support development of various technology-based effluent guidelines. Studies were conducted separately and with different study leaders. Information collected includes questionnaires covering engineering and economic information on individual plants. The questionnaires are supplemented by sampling and analyses from waste water discharge points, and secondary engineering and economic information. Information may include: plant name and location, plant size and age, wastewater characteristics, wastewater controls, treatment technologies, types of products/services, waste use, costs of wastewater treatment, pollution prevention practices.

ARRANGEMENT:

TYPE OF RECORDS:
Forms, reports

SPECIFIC RESTRICTIONS:
Confidential Business Information

MEDIUM:

VITAL RECORD:
No

FUNCTIONS SUPPORTED:
Regulatory development

SPECIFIC LEGAL REQUIREMENTS:
Clean Water Act, as amended, Section 301, et seq.
40 CFR 100, et seq.

EPA SERIES NO. 414X4

DISPOSITION INFORMATION:

FINAL DISPOSITION:

Disposable

TRANSFER TO FRC PERMITTED:

Yes

FILE BREAK INSTRUCTIONS: Break file when study completed.

DISPOSITION INSTRUCTIONS: Keep in office up to 5 years after file break, then retire to FRC. Destroy 10 years after file break.

APPLICATION GUIDANCE:

REASONS FOR DISPOSITION: The 10 year retention was based on the NARA approved retention for similar studies. Related documentation used to develop regulations and standards is scheduled for permanent retention either in EPA series 149A - Regulations, Standards and Guidelines, or EPA 150A - Rulemaking Dockets.

AGENCY-WIDE GUIDANCE: Records related to the development, review, and approval of regulations, standards, and guidelines are scheduled as EPA 149A. Rulemaking Dockets are covered in EPA 150A.

(YORK.SANDY)

Subject: 414A Info

item 2

Sandy:

On Friday (5/17) I talked with Eric Strassler of OW about EPA 414A - Effluent Guidelines Studies. He had polled the study managers about the proposed retention and volume of the studies. The responses he got lead him to estimate that the current volume on hand is approximately 60 linear feet and that the annual accumulation is around 10 linear feet. These numbers include the reports themselves and the supporting material.

He only received one comment on the retention time and that person suggested that the completed studies be kept in the office for 5 years and at the FRC for 10. The reasoning is that the studies are an important, and often unique, resource for OW rulemaking efforts. Since they are expensive and time-consuming to produce, it is impractical to reproduce the information they contain every few years. This means that they are often referred to 8-10 years after the data is collected. Eric supported this idea.

Eric said that 11 studies have been mandated by court order. Each study takes about two years to complete and he expects the last three to be completed sometime in 1997, but that depends on money priorities.

What next?

EPA Records Schedule 432

Status: Final, 02/15/2007

4) **Title:** Underground Injection Control (UIC) Program Summary System

Program: Water, Enforcement and Compliance Assurance

Applicability: Agency-wide

Function: 108-025-08 - Compliance and Enforcement

NARA Disposal Authority:

This schedule authorizes the disposition of the record copy in any media (media neutral), excluding any records already in electronic form. Records designated for permanent retention must be transferred to the National Archives in accordance with NARA standards at the time of transfer.

- N1-412-95-4/4

Description:

Contains annual summary reports of individual injection well activities conducted by each state and EPA administered Underground Injection Control (UIC) program. The summary information is used by EPA for the monitoring and enforcement of the UIC portion of the Safe Drinking Water Act (SDWA). EPA's monitoring and enforcement are primarily achieved through initial, quarterly, and annual reporting requirements for both owner/operator and primary enforcement (primacy) authorities. EPA uses a set of standardized forms (EPA form 7520) to collect and maintain UIC information at the state program level and at the EPA regional level. (Regions have the role of implementing UIC programs for states, territories, and Indian tribes, which do not have their own UIC programs.) Each region forwards to headquarters a set of forms (by primacy agency) which summarizes activities conducted by all UIC programs in its jurisdiction. These summaries represent the minimum information necessary to achieve the Agency's goals and satisfy regulatory requirements (e.g., permits, compliance and enforcement, inspection, mechanical integrity testing, and inventory). Headquarters maintains the summary information from the 7520 forms on a PC-based system called the UIC Program Summary System.

Disposition Instructions:

Item a: Electronic software program

- **Disposable**
- Delete when superseded by routine software updates or when no longer needed.

Item b: Input

- **Disposable**
- Keep in office up to 7 years after closure, then destroy.

Item c: Electronic data

- **Disposable**
- Close when superseded.
- Maintain data for 20 years, then delete.

Item d: Output and reports

- **Varies**
- File with related records and follow instructions for the related records.

Item e: Supporting documentation

- **Disposable**
- Keep inactive materials in office up to 2 years after closure, then retire to the FRC. Destroy when 15 years old.

Guidance:

Some confidential business information (CBI) restrictions apply to access of individual Class I hazardous waste injection well information maintained at the state and regional levels.

A similar system for Region 4 is scheduled as EPA 234. Information from the regional system is extracted and sent by mail to headquarters.

Due to a recent reorganization, enforcement data is now sent to the Office of Enforcement and Compliance Assurance.

Reasons for Disposition:

The purpose of the UIC program is to establish a federal-state regulatory system to ensure that actual or potential sources of drinking water are not endangered by the underground injection of contaminants. EPA information users include regional and headquarters staff who make decisions to: justify budget request/program plans; make fair resource allocation/grant allotments; satisfy public and other group requests; assess program progress and implementation; identify environmental success against litigation; plan the budget; track and evaluate regional performance; identify research needs and respond to inquiries from the Office of Management and Budget, Congress, General Accounting Office, and the public. Primary enforcement agencies in state use the information to target inspection and enforcement activity; to establish permit terms and conditions; to track performance against demands; identify violations; assess their significance; and evaluate their own program activities.

5) **Title:** Hazardous Waste Injection Well Database

Program: Water

Applicability: Agency-wide

Function: 108-025-03-01 - Underground Injection Control

NARA Disposal Authority:

This schedule authorizes the disposition of the record copy in any media (media neutral), excluding any records already in electronic form. Records designated for permanent retention must be transferred to the National Archives in accordance with NARA standards at the time of transfer.

- N1-412-95-4/5

Description:

The Hazardous Waste Injection Well Database is a PC-based inventory of Class I wells as defined by the Safe Drinking Water Act. The system stores information obtained during a special study to collect information for the 1985 Report to Congress on Injection of Hazardous Wastes. It also provides information on alternative treatment capacity analysis in addition to scheduling which wells are affected by the Resource Conservation and Recovery Act (RCRA).

The database includes the following data: facility or well owner/operator, identification and well class codes, chemical information concerning the injectate, well construction information, hydrogeological information about the area where injection occurs, waste information, RCRA codes and volumes.

The database consists of well records of active, inactive, and abandoned Class I wells and some limited information on Class I nonhazardous and Class IV wells. Since the completion of the study, few states have elected to update their information, therefore the major portion of records are only up-to-date as of 1987.

Disposition Instructions:

Item a: Electronic software program

- **Disposable**
- Delete when superseded by routine software updates or when no longer needed.

Item b: Input

- **Disposable**
- Follow instructions for EPA 171 - Input and Source Records.

Item c: Electronic data

- **Disposable**
- Maintain individual records 10 years after closure, then delete.

Item d: Output and reports

- **Varies**
- File with related records and follow instructions for the related records.

Item e: Supporting documentation

- **Disposable**
- Keep inactive materials in office up to 2 years after closure, then retire to FRC. Destroy when 15 years old.

Guidance:

Reports to Congress are scheduled as EPA 155.

Reasons for Disposition:

Records support program rulemaking activities and operations required by statute and regulation. The disposition meets program and administrative needs.

c) Title: Industrial Facilities Discharge (IFD) File

Program: Water

Applicability: Agency-wide

Function: 108-025-02-02 - Manage Point Sources of Water Pollution

NARA Disposal Authority:

This schedule authorizes the disposition of the record copy in any media (media neutral), excluding any records already in electronic form. Records designated for permanent retention must be transferred to the National Archives in accordance with NARA standards at the time of transfer.

- N1-412-95-4/6

Description:

The Industrial Facilities Discharge (IFD) File is a database of industrial point source dischargers to surface waters in the United States. There are three basic kinds of information:

- Facility - Includes site identification codes and summary effluent discharge.
- Discharge - Includes the components of individual discharges, including location, flow, and Standard Industrial Code (SIC). Nearly half of the direct dischargers tracked are POTWs (publicly-owned treatment works). Also includes indirect dischargers - industrial flows from industries that discharge to other facilities, such as POTWs, rather than directly to surface waters.
- Superfund sites on the National Priority List - Includes location name, State and county codes, latitude/longitude coordinates, Reach number, and the mileage offset within the reach.

Information is derived from several sources including the Permit Compliance System (PCS), the Needs Survey database, and EPA regional offices, states and local agencies. The File can be used for regulatory impact analyses, best available technology studies, regulation development, and special projects. It can be linked to other databases such as PCS and STORET as well as outside databases such as CETIS (Complex Effluent Toxicity Information System).

Disposition Instructions:

Item a: Electronic software program

- **Disposable**
- Delete when superseded by routine software updates and quality assurance check completed or when no longer needed.

Item b: Input

- **Disposable**
- Follow instructions for EPA 171 - Input and Source Records.

Item c: Electronic data

- **Disposable**
- Delete when superseded or no longer needed.

Item d: Output and reports

- **Varies**
- File with related records and follow instructions for related records.

Item e: Supporting documentation

- **Disposable**
- Maintain most current version and destroy when system is discontinued.

Guidance:

The Permit Compliance System (PCS) is scheduled as EPA 419. See EPA 405 for the Needs Survey. The Storage and Retrieval Water Quality Data Base (STORET) is covered in EPA 400 and The Waterbody System (WBS) in EPA 446.

Reasons for Disposition:

Records support operations of Office of Wetlands, Oceans and Watersheds as required by statute and regulation. Database consists of data extracted from other EPA databases already scheduled for permanent retention. It is a subset of the Permit Compliance System (PCS) for industrial permittees only with some publicly available information added.

Status: Final, 02/20/2007

7) **Title:** Reach File

Program: Water

Applicability: Agency-wide

Function: 108-023-02 - Water Monitoring and Forecasting

NARA Disposal Authority:

This schedule authorizes the disposition of the record copy in any media (media neutral), excluding any records already in electronic form. Records designated for permanent retention must be transferred to the National Archives in accordance with NARA standards at the time of transfer.

- N1-412-95-4/7

Description:

The Reach File is a database of surface water features developed to identify all streams, lakes, reservoirs, coastlines, and estuaries in the United States. Each of the reaches in the file is uniquely identified by a 16-digit Reach number. The following kinds of information are maintained for each reach: hydrologic structure (reach name, type, length, upstream and downstream connections, state and county), reach trace (latitude/longitude coordinates along reaches), and open waterbody characteristics (description of whole waterbodies, e.g., ponds, bays, reservoirs, including surface area and perimeter. Information for the database was derived from many sources including NOAA aeronautical charts, USGS cataloging unit boundaries, and the USGS Geographic Names Information System (GNIS) database.

There are a number of STORET/Reach support files containing information from published sources and other agencies including the following: Gage and Dam Files, Drinking Water Supply File, and City and County Files. These files are used to assist researchers do analyses such as mean and low flow values, Public Water Supplies (PWS) characteristics, and sources of surface water supplies.

Disposition Instructions:

Item a: Electronic software programs (Reach File and support files)

- **Disposable**
- For each major version change to Reach File, maintain current version on tapes or cartridges according to NTSD's directives and procedures. For any routine software updates or version changes to software for the support files, delete software after quality assurance check is performed.

Item b: Input

- **Disposable**

- Follow instructions for EPA 171 - Input and Source Records.

Item c: Electronic data

- **Permanent**
- Transfer version RF3-Alpha of the Reach File data annually to the National Archives as specified in 36 CFR 1228.270 or standards applicable at the time. Delete data in support files when superseded or no longer needed.

Item d: Output and reports

- **Varies**
- File with related records and follow instructions for the related records.

Item e: Supporting documentation

- **Permanent**
- Transfer those records necessary to document how the Reach File system captures, manipulates, and outputs data to the National Archives as specified in 36 CFR 1228.270 or standards applicable at the time. This documentation is transferred along with the transfer of the electronic data (item c). For support files, maintain the most current version and destroy when system is discontinued.

Guidance:

The Storage and Retrieval Water Quality Data Base (STORET) is scheduled as EPA 400. Other related systems include the Industrial Facilities Discharge (IFD) File - EPA 444 and The Waterbody System (WBS) - EPA 446.

Reasons for Disposition:

This is a unique geographic system that is essential for doing water quality analysis.

Status: Final, 02/20/2007

8) **Title:** The Waterbody System (WBS)

Program: Water

Applicability: Agency-wide

Function: 108-023-02 - Water Monitoring and Forecasting

NARA Disposal Authority:

This schedule authorizes the disposition of the record copy in any media (media neutral), excluding any records already in electronic form. Records designated for permanent retention must be transferred to the National Archives in accordance with NARA standards at the time of transfer.

- N1-412-95-4/8

Description:

The Waterbody System (WBS) is a database of state water quality assessment information collected to meet the Agency's Congressional reporting requirements under Section 305(b) of the Clean Water Act. States submit information to EPA on several types of surface waters affected by point or nonpoint source pollution, lakes monitored under the Clean Lakes Program, and surface waters requiring the assigning of total maximum daily loads limits to restore or maintain their water quality.

Information entered into WBS includes: waterbody identification, water quality status, sources of impairment, assessment information, and causes of impairment. States, territories, and interstate commissions assemble available monitoring information and make judgments on water quality before summary information can be entered into the system. Information is submitted to EPA every two years. WBS stores the components and the results of the assessment, and is not designed to store, manipulate, or analyze raw monitoring data.

The WBS is linked to the EPA Reach File and STORET. The NPDES number also links facilities reported in WBS to Industrial Facilities Discharge (IFD) system and the Permit Compliance System (PCS).

Disposition Instructions:

Item a: Electronic software program

- **Disposable**
- Delete when superseded by routine software updates and quality assurance check completed or when no longer needed.

Item b: Input

- **Disposable**
- Follow instructions for EPA 171 - Input and Source Records.

Item c: Electronic data

- **Disposable**
- Delete when superseded or no longer needed.

Item d: Output and reports

- **Varies**
- File with related records and follow instructions for the related records.

Item e: Supporting documentation

- **Disposable**
- Maintain most current version and destroy when system is discontinued.

Guidance:

Other related series include:

- EPA 400 - Storage and Retrieval Water Quality Data Base (STORET)
- EPA 419 - Permit Compliance System (PCS)
- EPA 444 - Industrial Facilities Discharge (IFD) File
- EPA 445 - Reach File

Reasons for Disposition:

Records support operations required by statute and regulation. Disposition meets administrative and program needs. This is an automated version of the information in EPA 429 - State 305(b) Water Quality Reports, which is disposable. Long-term responsibility for the data should lie with the submitting state.
