**SIGNATURE OF AGENCY REPRESENTATIVE** N. Sanchez  
**TITLE** Office of General Counsel
REGIONAL LICENSEE INFORMATION TRACKING SYSTEMS

The Regional Licensee Information Tracking Systems are databases with a password secure website interface used to store and manage information about licensee plant status and incident reporting. Data is entered by the Resident Inspectors for use in assembling reports to NRC Regional and Headquarters management. Two systems have currently been identified in this record series, Plant Information Tracking System (PITA) and the Fuel Facility Information Tracking System (FFITS), both of which have been developed by NRC Region II.

PITA is used to record information on Region II operating nuclear power plant status and incidents. FFITS, which is still in development, will provide the same function for the Region II Fuel Facilities, when it is completed and becomes operational. Other NRC Regions may use similar systems to collect and report status information for those plant and facility licensees under their cognizance.

1) Inputs/Source Documents
Reference information (e.g., resident inspector notes) is directly entered into the systems through the web interface. This information may be updated as more information becomes available.

Disposition: TEMPORARY. Cut off after data entry and the information in the system is verified to be correct. Destroy at cut off or when no longer required for business purposes [GRS 20, Item 2a].

2) Master File
Information contained in PITA and FFITS includes:

- Licensee Specific Information
  - Docket number
  - Plant or Facility Name
  - Owner
  - Location
- Status or Incident Information
  - Date Submitted
  - Description of status or event information

Disposition: TEMPORARY. Cut off at the end of the fiscal year and destroy 3 years after cutoff.

Disposition: TEMPORARY. Cut off at the end of the fiscal year and destroy 10 years after cutoff.

Above revised disposition for item 2 (Master File) was approved by NRC Records Officer Deborah Armentrout, 9/21/12.

3) Outputs
The reports created from PITA and FFITS databases provide the basis for status report summaries for NRC Regional and Headquarters management.

Disposition: TEMPORARY. Cut off at the end of the fiscal year and destroy 5 years after cutoff.
4) **System Documentation**

System Documentation has been developed in accordance with NUREG/BR-0167, “Software Quality Assurance Program & Guidelines”. The following work products are typical of the documentation developed and stored in Rational ClearCase. These include both the initial and revised documentation:

- Data Dictionary
- Build and Installation Instructions
- Logical Design
- Online Help
- Operational Support Guide
- Physical Design
- Project Action Plan
- Project Charter
- Tactical Integration Plan
- Test Plan
- Training Material
- User Guide

**Disposition:**

a) **Initial and Revised System Documentation.**

**Disposition:** TEMPORARY. Retain current revisions of these records in a controlled repository (e.g., Rational ClearCase or ADAMS) until development is complete and the software is operational. Transfer the final approved versions and subsequent revisions of these documents to ADAMS, or other currently approved record keeping system, in a format acceptable to the ADAMS Administrators and Records Officer. Cut off and destroy when the documents are superseded or when the associated system is decommissioned. [GRS-20, Item 11 a]
