U.S. Nuclear Regulatory Commission
Office of the Inspector General (OIG)

Records of the Office of the Inspector General

The United States Congress passed the Inspector General Act (IG Act) in 1978 to ensure integrity and efficiency within the Federal Government and its programs. NRC's OIG was established as a statutory entity on April 15, 1989, in accordance with the 1988 amendment to the IG Act. NRC OIG's mission is to (1) independently and objectively conduct and supervise audits and investigations relating to NRC programs; (2) prevent and detect fraud, waste, and abuse; and (3) promote economy, efficiency, and effectiveness in NRC programs and operations. In addition, OIG reviews existing and proposed regulations, legislation, and directives and provides comments, as appropriate, on identified significant concerns. The Inspector General also keeps the NRC Chairman and members of Congress fully and currently informed about problems, recommends corrective actions, and monitors NRC's progress in implementing those actions. The OIG carries out its mission through its audit and investigative programs.

The following record disposition schedules were developed for records unique to the OIG. The records in this schedule may be in electronic, paper or another format, and the dispositions apply regardless of format; i.e., they are media neutral.

**OFFICE OF THE INSPECTOR GENERAL MANAGEMENT INFORMATION SYSTEM
(OIGMIS)**

OIGMIS is an electronic collaboration tool used by the Office of the Inspector General that is built on a Lotus Notes/Domino platform consisting of three principal databases. These databases include:

- AutoAudit – contains documents created by and supporting the Audits performed by OIG. Documents in the system are created electronically and include Audit Reports and supporting work papers and audit follow-up documentation. Other information, for example training certificates, is typed directly into AutoAudit or scanned and attached to AutoAudit documents.
- MAGNUM -- contains documents created by and supporting the Investigations, Special Inquiries and Event Inquiries performed by OIG. MAGNUM stores final electronic documents, such as Reports of Investigations (ROI) as attachments, and chronological notes (typed into Lotus Notes). However MAGNUM also stores a reference to paper documents such as background information or evidence, which may be stored as a physical record with an assigned serial number in the case file. MAGNUM also provides a location to capture the hours each investigator has spent on cases.
- CCL – contains information concerning correspondence sent and received by the OIG. It is used to produce a tickler (Yellow Ticket) to manage actions resulting from the correspondence. Copies of correspondence may be attached to CCL.

Two additional supporting databases work within OIGMIS to facilitate access, management and maintenance of OIGMIS.

OIGMIS is used to store and distribute OIG files within OIG. The OIGMIS information is encrypted for security. Some OIG documents intended for public release are also contained in ADAMS as reference copies. However, because of concerns with control of access to ADAMS document libraries, only some of the OIG records are transferred.
