

8 November 1963

MEMORANDIM FOR-

Chief, SAS/Support

SUBJECT

C-4 and C-3

- 1. C-4 and C-3 explosives are available on world-wide basis although in many instances they might bear different trade names.
- 2. The above items are also available from Agency stocks. C-3 is tan color and of plastic composition but has a definite aroma of banana oil. C-4 is white and odorless. Both items come in two pound blocks and are carried on the general stock run at \$1.00 a block. Each block is two inches by cloven inches.

 300,000 blocks of Cy4 on hand. Use of stocks is not restricted because the items have world-wide distribution and are consequently deniable. Transportation and delivery to the consignee would be the only problem.
- 3. Commercial projurtment through traders in this type item is definitely possible but raises many problems. Export and import persits are required and shipment of such commodities is restricted to certain bottoms and local Coast Guard requirements must be adhered to. The point is that movement of commodities of this nature through cornercial channels is possible but presents many problems.
