DECLASSIFICATION 8/1/92

Reference is made to our previous communications
in the captioned matter terminating with our communication
of July 10, 1967.

Attached is a copy of a memorandum dated July 26,
1967, at Washington, D. C. Single copies of the 12 photographs
and one copy of the telegraphic money order, which are referred
to in the memorandum, are also attached. (C)

The confidential source abroad mentioned in the
attached memorandum advised, in addition, that the attached
material cannot be used as evidence. The source pointed out,
however, that the original copy of the Mexican Army Report,
properly certified; the original photographs; the telegraphic
money order; and the record of the long distance telephone
call at the Hotel Mante in Mexico which is also mentioned in
the attached memorandum, could be produced in court upon com-
pletion of the proper diplomatic representation by the United
States Government to the Mexican Government. The source
furnished the attached material so that the United States
Government would know what evidence could be made available
if the Mexican Government accedes to a request to produce it. (C)

Our investigation in this matter is continuing and
the pertinent results will be made available to you. 4-11-94 SP6 Mac/jed

NOTE: ~~SECRET~~ Subjects in this case were involved in unsuccessful anti-Castro plot to blow up ship in Mexico in April, 1967. Based on information we developed, Mexican authorities located explosives which had been buried in Mexico by some of those involved prior to their return to United States. (C)

Investigation is being conducted at specific request of Department which has indicated there are possible violations of Title 18, Section 956 (Conspiracy to injure property of a foreign government) and Title 22, Section 1934 (Unlicensed exportation of munitions).

Information being transmitted to Department is detailed report of discovery of explosives by Mexican authorities together with appropriate photographs. In addition, Mexican authorities were able to obtain copy of money order originating in Miami, Florida, addressed to one of those involved in Mexico, as well as record of telephone call made by one of subjects in Mexico to individual in Miami. (C)

Classified "Confidential," since unauthorized disclosure could be prejudicial to national defense interests by compromising source of continuing value.

ENCLOSURES:

Enclosed are 13 copies of letterhead memorandum
dated and captioned as above.

REFERENCE:

Miami Airtel dated 7/1/67
Mexico City airtel dated 7/6/67
Bureau airtel dated 7/20/67

ADMINISTRATIVE:

FERNANDO GUTIERREZ BARRIOS, Director, Mexican
Federal Security Police (DFS), has advised that, while the
material he has furnished this office may be prepared for
dissemination with the originating source protected, this
material may not be used as evidence. However, the original
copy of the Mexican Army Ordnance report, properly certified,
the original photographs, the telegraphic money order and the
record of long distance telephone call at the Hotel Mante
can be produced in court upon completion of the correct diplo-
matic representations by the United States government to the
government of Mexico. In that sense, the material presently
furnished by DFS is for information only, in order that the
United States government will know what evidence can be made
available if the Mexican government accedes to a request to
produce it.

FRANK ANGELO FIORINI; ET AL
Reported Plans to Blow Up Cuban Ship
in Mexican Port, Possibly Veracruz

Permit me to inform you on the results of
the assignment given to me and Captain Antonio Olmos
Del Moral at Ciudad Mante, Tamaulipas Plaza, May 2, 1967. (S)

I. Background Information. (S)

As is already known, the Secretary of the
Government, through the (Mexican) Federal Security
Police (D.F.S.), requested the cooperation of the technical
personnel of this Department in the finding, identifying
and destruction of some "bombs," detonators and other
devices which, according to information obtained by the
D.F.S., had been brought into the country and buried at
a spot near the Mante-C. Victoria road, between kilometers
643 and 644. (S)

II. Location of the Zone and Spot Where the
Explosives Were Found. (S)

As a result of the above request, the under-
signed and Captain Olmos, accompanied by two agents of
the D.F.S., went immediately to Ciudad Mante, Tamaulipas,
and arrived at said plaza at 3:20 A.M., May 8, 1967. (S)

On the same day, at 8:00 A.M., we went to the
indicated spot, between kilometers 643 and 644, for the
purpose of determining the indicated zone where, according
to the information, was located the spot where the
explosives had been buried. (S)

At the end of four hours, we succeeded in
finding the exact spot where the explosives had been
buried, in a promontory bordering the left side of the
road and approximately 15 meters from the road, between
kilometers 642 and 643. The location is shown on
Photographs No. 1 and 2. (S)

III. Location of the Explosives. (S)

In the above-mentioned area, in a zone no (S)

~~CONFIDENTIAL~~

larger than 25 meters, we unearthed the following: (S)

1) A "bomb" or a double explosive charge, wrapped in sections of a tire inner tube, and fastened by adhesive tape. Photographs 3 and 4. (S)

2) Four magnets, consisting of coiled spools especially positioned, in pairs, to fasten each of the explosive charges to metallic parts. Photographs 5 and 6. The magnets, like the charges, were found wrapped in sections of an inner tube. (S)

3) The detonators for the explosive charges. These were found wrapped in a plastic bag. Photograph No. 7. (S)

4) The remnants of an explosive charge. It is thought that farmers in the area accidentally discovered it and, in attempting to see its contents, destroyed it completely. Photograph No. 8. (S)

Of these remnants, the following were recovered separately: (S)

a) The explosive material. (S)

b) Fragments of a container, a blue plastic tape, labels from the factory which manufactured the explosive, remains of newspapers, pieces of plywood and pieces of a mesh, plastic cloth. Photograph No. 9. (S)

IV. Identification of the Explosive Material. Visual Examination. (S)

Once all the items in the area had been unearthed, we proceeded to examine them in detail in order to attempt to identify them and ascertain as to what condition they were in so as to destroy them, should conditions warrant it. (S)

~~Confidential~~

a) The Explosive Charge - Rectangular in shape with the following approximate dimensions: 30 x 20 x 7 centimeters. The charge consists of a block of explosive covered with a solid, putty-like plastic material, the entire surface of which is covered with black insulation tape. At one of its edges, 2 plugs for an iron pipe of 3/4 inch diameter were found. These are fastened separately by a screw to lengths of galvanized iron pipe of the same diameter and approximately 15 centimeters long. The pipes are located inside the explosive charge and serve as a lodging for the detonators. Two metallic rods of 7 millimeters in diameter and 10 centimeters long extend along the longitudinal axis of the charge. They have screws at the ends which serve to fasten them to the spools. (S)

The explosive inside is white in color and plastic-like. Its characteristics and potency are unknown. It will be necessary to conduct analyses to determine its class and type. (S)

It was ascertained that the explosive charge was not assembled and ready for detonation, since it did not contain the proper elements for starting, propagating and amplifying the detonation. PHOTOGRAPH No. 10 (S)

b) Spools-magnets - There are four of them, and they consist of spools of approximately 3 x 2 x 1 inches, containing at their ends two metallic plates fastened by bolts. Each of these plates has a bore hole into which the small rods used to hold the charge are placed. On the side opposite that containing the bore hole, there is a metallic plate whose function is to serve as the surface which is connected by the magnet to any metallic surface. Photograph No. 11. (S)

Detonators - The detonators are of the percussion type and apparently are activated by an electric current. They have an approximate length (S)

of 25 centimeters and a diameter of 7 to 8 millimeters. (S)

They are composed of a percussion mechanism,
a safety and an explosive charge. Photograph No. 12. (S)

Because of the condition in which they were
found and because they were found to be safe for handling
and transportation, they were not destroyed. (S)

V. Transportation of the Explosives and Their
Delivery to the D.F.S. (S)

The explosives (complete charge and recovered
remnants), detonators and magnets, perfectly wrapped
and packed, were brought to this city on the afternoon
of the 4th and were handed over to the Federal Security
Police on the morning of May 5, 1967. Later, at
11:30 A.M. on the same day, they were sent to a powder
magazine at the explosives plant, after having first
been examined by the Director of the D.F.S. The explosives
are now at the disposal of the proper authorities. (S)

Attached herewith are 12 photographs for
information purposes. (S)

Permit me to inform you on the results of the assignment given to me and Captain Antonio Olmos Del Moral at Ciudad Mante, Tamaulipas Plaza, May 2, 1967. (S)

I. Background Information. (S)

As is already known, the Secretary of the Government, through the (Mexican) Federal Security Police (D.F.S.), requested the cooperation of the technical personnel of this Department in the finding, identifying and destruction of some "bombs," detonators and other devices which, according to information obtained by the D.F.S., had been brought into the country and buried at a spot near the Mante-C. Victoria road, between kilometers 643 and 644. (S)

II. Location of the Zone and Spot Where the Explosives Were Found. (S)

As a result of the above request, the undersigned and Captain Olmos, accompanied by two agents of the D.F.S., went immediately to Ciudad Mante, Tamaulipas, and arrived at said plaza at 3:20 A.M., May 8, 1967. (S)

On the same day, at 8:00 A.M., we went to the indicated spot, between kilometers 643 and 644, for the purpose of determining the indicated zone where, according to the information, was located the spot where the explosives had been buried. (S) (S)

At the end of four hours, we succeeded in finding the exact spot where the explosives had been buried, in a promontory bordering the left side of the road and approximately 15 meters from the road, between kilometers 642 and 643. The location is shown on Photographs No. 1 and 2. (S)

III. Location of the Explosives (S)

In the above-mentioned area, in a zone no (S)

~~Confidential~~

FRANK ANGELO FIORINI; ET AL
Reported Plans to Blow Up Cuban Ship
in Mexican Port, Possibly Veracruz

larger than 25 meters, we unearthed the following: (S)

1) A "bomb" or a double explosive charge, wrapped in sections of a tire inner tube, and fastened by adhesive tape. Photographs 3 and 4. (S)

2) Four magnets, consisting of coiled spools especially positioned, in pairs, to fasten each of the explosive charges to metallic parts. Photographs 5 and 6. The magnets, like the charges, were found wrapped in sections of an inner tube. (S)

3) The detonators for the explosive charges. These were found wrapped in a plastic bag. Photograph No. 7. (S)

4) The remnants of an explosive charge. It is thought that farmers in the area accidentally discovered it and, in attempting to see its contents, destroyed it completely. Photograph No. 8. (S)

Of these remnants, the following were recovered separately: (S)

a) The explosive material. (S)

b) Fragments of a container, a blue plastic tape, labels from the factory which manufactured the explosive, remains of newspapers, pieces of plywood and pieces of a mesh, plastic cloth. Photograph No. 9. (S)

IV. Identification of the Explosive Material. Visual Examination. (S)

Once all the items in the area had been unearthed, we proceeded to examine them in detail in order to attempt to identify them and ascertain as to what condition they were in so as to destroy them, should conditions warrant it. (S)

FRANK ANGELO FIORINI; ET AL
Reported Plans to Blow Up Cuban Ship
in Mexican Port, Possibly Veracruz

a) The Explosive Charge - Rectangular in shape with the following approximate dimensions: 30 x 20 x 7 centimeters. The charge consists of a block of explosive covered with a solid, putty-like plastic material, the entire surface of which is covered with black insulation tape. At one of its edges, 2 plugs for an iron pipe of 3/4 inch diameter were found. These are fastened separately by a screw to lengths of galvanized iron pipe of the same diameter and approximately 15 centimeters long. The pipes are located inside the explosive charge and serve as a lodging for the detonators. Two metallic rods of 7 millimeters in diameter and 10 centimeters long extend along the longitudinal axis of the charge. They have screws at the ends which serve to fasten them to the spools. (S)

The explosive inside is white in color and plastic-like. Its characteristics and potency are unknown. It will be necessary to conduct analyses to determine its class and type. (S)

It was ascertained that the explosive charge was not assembled and ready for detonation, since it did not contain the proper elements for starting, propagating and amplifying the detonation. **Photograph No. 10.** (S) (S)

b) Spools-magnets - There are four of them, and they consist of spools of approximately 3 x 2 x 1 inches, containing at their ends two metallic plates fastened by bolts. Each of these plates has a bore hole into which the small rods used to hold the charge are placed. On the side opposite that containing the bore hole, there is a metallic plate whose function is to serve as the surface which is connected by the magnet to any metallic surface. **Photograph No. 11.** (S)

Detonators - The detonators are of the percussion type and apparently are activated by an electric current. They have an approximate length (S)

in Mexican Port, Possibly Veracruz

of 25 centimeters and a diameter of 7 to 8 millimeters. (S)

They are composed of a percussion mechanism,
a safety and an explosive charge. Photograph No. 12. (S)

Because of the condition in which they were
found and because they were found to be safe for handling
and transportation, they were not destroyed. (S)

V. Transportation of the Explosives and Their
Delivery to the D.F.S. (S)

The explosives (complete charge and recovered
remnants), detonators and magnets, perfectly wrapped
and packed, were brought to this city on the afternoon
of the 4th and were handed over to the Federal Security
Police on the morning of May 5, 1967. Later, at
11:30 A.M. on the same day, they were sent to a powder
magazine at the explosives plant, after having first
been examined by the Director of the D.F.S. The explosives
are now at the disposal of the proper authorities. (S)

Attached herewith are 12 photographs for
information purposes. (S)
