1. Attached by split transmission is an outline for Project LIONION covering the services of the two agents heretofore known as LIF349-22 (201-286043) and LIF349-23 (201-305606). This project was anticipated in paragraph 4, page 9 of the LIRANCH project outline transmitted by Reference.

2. To avoid re-typing at Headquarters the Station has taken the liberty of provisionally assigning cryptonyms LIONION-1 and LIONION-2 to these agents. Please advise if this is correct.

Lawrence F. Bartet
Willard C. Curtis
PROJECT OUTLINE

CRYPTONYM  LIONION

FIELD CASE OFFICER  Lawrence F. Barker

STATION  Mexico City

CHIEF OF STATION  Willard C. Curtis

The attached Project Outline is presented for approval.

0004093
A. Identification. This is a technical (primarily photographic) surveillance operation against the PBRUMEN Embassy in Mexico City.

B. Objectives. The operation is designed to (1) furnish photographic coverage during daylight hours of the entrances of the target installation, (2) dispatch physical surveillance teams against persons associated with the target, and (3) keep in readiness a listening post for the monitoring and recording of eventual technical penetration operations of the target.

The target installation is the PBRUMEN Embassy compound (including Consulate) in Mexico City. The above-listed objectives are accomplished by two trained, full-time surveillance agents who live across the street from the target.

The project is in consonance with Priority A, Objective 1, of the current Related Mission Directive for Mexico.

C. Background. This project, herewith presented for approval for the first time, does not represent a new operation. LIONION activity has been going on since 1962 and costs have heretofore been charged to PBRUMEN MI funds. The operation produces photographs of persons associated with the PBRUMEN Embassy, both staff and visitors; these photographs are normally reviewed for identifications by the PBRUMEN section at the Station, then shown separately to LITAMIR-9 and LITAMIR-7 who are penetration agents working inside the target. They are subsequently forwarded to the CI section of WH/SA where they are shown to PBRUMEN intelligence defenders: ASWIP-1 and ASWIP-1. Of those assets to whom they are routinely shown, LITAMIR-9 has to date made the largest number of identifications. The photos have proven of great value. Within hours of the arrival of a new Embassy staff member his photograph is in the hands of the Station; in addition to the identification of staff and visitors, the photos (accompanied by a log kept by the LIONION agents) reveal patterns of action (arrivals and departures) and details of personal associations (who associates with whom) which are of great value to the Station in mounting operations against the target.

In addition to photography, LIONION-1 and LIONION-2 are often called upon to do visual surveillance of the target installation and LIONION-1 is essential to the dispatching of the LEMBRAE surveillance team against individuals associated with the target. Because of the presence of police patrol cars in the vicinity, the Station’s mobile surveillance assets cannot come close to the target, hence the need for LIONION-1’s dispatching services.

The presence of LIONION-1 and LIONION-2 also insures continued occupancy of a valued piece of real estate which will be used as a listening post when the Station succeeds in installing additional technical surveillance devices in the target in the form of concealed radio transmitters.
D. Operational Assets (Personnel).

LIONION-1 is a young PHERMEN lawyer in exile. He left PHERMEN in 1960, planning to continue on via Mexico to the United States where he resided in his early years. His two brothers are American citizens, one a desk officer in the Department of Commerce in Washington, the other a police official in Tampa, Florida. While in Mexico LIONION-1 was recruited, as LILILY-1, to perform PHERMEN operational support services for the Station and, once having a taste of clandestine activity, decided to remain in Mexico. LIONION-2, his mother, was recruited in 1961, as LILILY-2, as a housebook occupant and operator in the LIFEG/LLERODE technical operation aimed at the PHERMEN Embassy. At this same time LIONION-1 also phased into LIFEG/LLERODE work and the two worked together as a team. In 1962 LIONION-1 and LIONION-2 worked together in processing the take of the LIFEG/LLERODE/NEONP installation, now known as LIGMEN. At this time their cryptonyms were changed from LILILY-1 and 2 to LIFEG-22 and 23, respectively. In the latter part of 1962 the two agents began the present photographic surveillance operation.

LIONION-1 was granted an OA on 18 May 1962 by H000-10664. He was LCLUTTERED on 8 October 1963, H000-12064.

LIONION-2 was granted an OA on 15 May 1962 by H000-10664.

LIONION-1 is the mainstay of the operation. LIONION-2 acts as his assistant and fill-in at such times as he is absent from the observation post. Both serve principally as observers and photographers. LIONION-1 also acts as a dispatcher for the LINEDFARCE surveillance team from which he is compartmented. Dispatching is done by radio using pre-arranged innocuous code terminology; the team does not know LIONION-1 or his precise location. LIONION-1 also processes on the premises all photographic coverage of the main Embassy gate through final printing, cropping and mounting. Photographic coverage of the Consulate gate is processed through the negative development stage.

Control is primarily financial buttressed by the knowledge, on the part of the agents, that as PHERMEN refugees they are vulnerable to pressure which might be brought upon them by KUBARK through the Mexican government should they get out of line. Motivation is a combination of financial necessity and violent aversion to, and determination to bring about the downfall of, the AMIRGUI regime. An additional motivating factor is that both agents actually enjoy what for many would be monotonous work. Psychologically, they are ideally suited to this sort of work.

Both agents realize that they are working for PHERMEN intelligence; LIONION-1 appears to be aware that he is working for KUBARK. The cover utilized by LIONION-2 is that of dependent mother. LIONION-1 passes as a would-be writer who can afford to dabble without notable publishing success because of family landholdings in Tampa, Florida (inherited from his deceased father), which enable him to live as a "rentista," one who lives on income from sources other than gainful employment. His rentista status is registered with the Mexican government. In October 1964 this cover successfully withstood intensive investigation by Mexican authorities checking on persons of questionable status for tax collection purposes. The Station plans to bolster the writing cover with supporting documents from a literary agent in New York City; these will be requested in separate correspondence.
Communication is primarily with LIONION-1; with LIONION-2 only in his absence. Meetings, pre-arranged or signalled by innocuous phone calls (calls from LIONION-1 go through a telephone cut-out), are usually held at the LIONION-1 safe apartment. This apartment, which would appear to be a LIONION-1 love nest, is in another area of town. The Station KURIOB technician, Hugh T. FRANCOTTI, meets with LIONION-1 at least once a week. The Case Officer, Lawrence F. BARKER, meets with him less frequently. Whereas LIONION-1 knows the true name of the Case Officer, he does not know FRANCOTTI's true identity.

E. Security Evaluation. If either of the LIONION agents are uncovered by Mexican authorities as engaged in operations against the target, they have been briefed to indicate that they are working for an exile organization based in the JMVME area on a voluntary, non-paid, patriotic basis and to stick to the story covering their income. This would probably hold up unless they were caught in flagrant with the KURIOB automatic pulse camera on the premises. This camera is of such refinement and complexity as to be difficult to ascribe to an exile organization. In any event, LIONION-1 has a close relationship with an official of the Mexican president's office. This connection, developed by LIONION-1 for his own protection, enabled him to weather the tax investigation and can be used by him to overcome any future difficulties with Mexican authorities.

Under Mexican law, the principal (photographic) activity of the project is not illegal, therefore uncovering of the photographic operation would not of itself result in arrest or prosecution. It is usually possible to stave off investigation or house search for a period of time sufficient to remove compromising material from the premises. The LIONION base house was once cleaned completely in one evening and could again be cleaned, probably in less time, if circumstances should warrant.

The target installation is aware that photo surveillance is a probability. On one occasion AMENOS-1, a JMVME asset, was shown a nearby building (not the LIONION base) by a PERUMEN Embassy officer and told that it was a KURIOB photo base.

LIONION-1 is known by sight to some PERUMEN Embassy staff personnel who have observed him in the neighborhood. Presumably they believe he is a Mexican. To avoid operational compromise, he cannot renew his expired passport at the PERUMEN Consulate. For this reason the Station will request KURIOB in separate correspondence to prepare new passports for both LIONION agents so that they may travel outside Mexico.

Security measures employed in this operation are designed to make it virtually impossible for any opposition service to link LIONION personnel with the Station.

F. Coordination. Coordination with other PERUMES elements or the Mexican government is not necessary at this time and none is envisaged.
G. Costs. The total annual cost of Project LIONION is $10,478, distributed as shown below:

Salaries for LIONION-1 and -2 include the customary year and bonus of one month's salary. LIONION-1's salary was raised from $200 to $320 monthly in 1964 to compensate in part for his renunciation of a sales position in order that he might devote his full time to the LIONION operation. LIONION-2's salary has remained at $150 per month since her recruitment in 1961. No salary changes are contemplated during the project year.
