

SECRET**Tech Activity**

The initial effort (about 1958) against the PERUMEN, TPELIDE target was a PBIMPULSE (hot-mike telephone). It was introduced into the target using LIFEAT assets and was actuated from the LIFEAT VI basehouse.

Subsequent to that (1960-1961), eight microphone/transmitter installations were made in the same target. These were called LIERODE installations. One or two were placed in the senior official's office at various times during this period. These installations were monitored from a truck (not the LIFIRE truck) and an apartment (basehouse Able) and later a second, closer apartment (basehouse Baker).

Basehouse Baker was always referred to as the LIERODE Base.

The last microphone/transmitter installation ceased functioning during late 1961 and at that time work started on a new installation called LIERODE/MKTRAP because the MKTRAP technique was used.

The LIERODE/MKTRAP installation was made using LIFEAT assets and was actuated from the LIFEAT-VI Base during March 1962.

At some time during the period 1962-1963 photo operations were put into effect using Basehouse Baker (LIERODE Base).

During November 1963, the LIERODE/MKTRAP installation was re-actuated from a second LIFEAT Basehouse (Basehouse Charlie).

In summary, since 1958 there have been the following technical operations from the following bases against this target:

- | | |
|--|---------------------------------------|
| 1. PBIMPULSE (hot-mike telephone) | LIFEAT-VI |
| 2. Mike/transmitter installations (8 each) | Basehouse A & B (now) |
| 3. MKTRAP (hot-mike telephone) | LIFEAT-VI and
Basehouse C (1962-?) |
| 4. Photo operations | Basehouse B (1963) |

NOTE: Basehouse A was strictly temporary and almost certainly is not in use and probably not available at this time. It is believed that it is the apartment of a ~~man~~ relative of LINIMENT-22.
