

1. **NARA Enhanced Scan** – The NARA Enhanced scan will be only available at locations capable of meeting the capabilities discussed below. This type of reproduction can be used for textual, cartographic, and photographic reproductions. Reproduction scans will adhere to the following specifications:

- Minimum Scanner Resolution: 400 ppi @ original document size or 4000 pixels on the long dimension for film scans (negatives will be inverted to a positive tonal orientation).
- Minimum Scanner Bit-Depth: 1 bit for Black-and-White, 8 bits for grayscale, and 24 bit for color.
- Color Options: Black-and-White, Grayscale, Color.
- Minimum Document Scan Size: 8 ½” x 14”. Scan size will vary by location.
- Image Adjustment: Color and tone reproduction has been adjusted for generic monitor display. System calibration and/or image processing has been performed to ensure a Federal Agency Digitization Guideline Initiative (FADGI) image quality rating of at least 1-star in all categories (<http://www.digitizationguidelines.gov/still-image/>).
- Possible File Types: .TIF, .JPG, .BMP, .PDF. Available file types may vary by locations.
