	Money Laundering Risk (MLR) System		
<i>SA copies sent to Ager, NWMD, NWMA, NR, NWCT</i>			

This schedule applies to all formats and media in which records are created and maintained at the OCC, including paper, microfilm, and electronic records.

Item 1. Money Laundering Risk (MLR) System

General Description and Purpose: The MLR system is a web-based application used to quantify money-laundering risk in community banks. The purpose of the MLR is to better enable the OCC to identify money laundering risk in the national banking system. The system allows OCC to better pinpoint those institutions, and areas within institutions, that pose heightened risk, and allocate examination resources accordingly.

a. Master File

The master file contains activity information for each institution about four general categories (products, services, customers, and geographic data). One record is created for each institution per reporting period (usually every 12 months). The records in the system date from 2005 to present. The approximately 60 data fields in the master file include the following: Charter Number (the unique OCC identifier), Institution Type, Quantity of Risk, applicable Product, Service, Customer listing, Country Risk Designation, Supervisory Office Name, and Aggregate Risk Score.

Disposition: Temporary. Delete data when 10 years old.

b. Inputs

Information about products, services, customers, and applicable geographic area are entered manually by banks using the BSA/AML¹ Quantity of Risk Summary Form (commonly called the Risk Summary Form) or entered manually on-line by bank examiners. After the information is input on to the Risk Summary Form it is uploaded into a database. Additional institution structure and financial information is available and is entered electronically from the Operational Data Store (ODS).

Disposition: Temporary. Delete or destroy form after data entered and validated.

c. Outputs

Customized reports and preformatted reports such as Community Bank Analysis Report, MLR Supervisory Office Report, and Community Bank Analysis: Low/Moderate Risk PSC Data.

Disposition: File reports with appropriate related records. Follow records disposition instructions for that series of records.

d. System Documentation

Application software and/or application code, record layouts, technical descriptions of the files, user guides, and other records required for maintenance of system and access/use of data.

Disposition: Temporary. Destroy or delete when system is obsolete or superseded, or when no longer needed to access or interpret system data, whichever is later.

¹ Bank Secrecy Act/Anti-Money Laundering
