Agency or Establishment Defense Security Service

Record Group / Scheduling Group Records of the Defense Security Service

Records Schedule applies to Agency-wide

Schedule Subject National Industrial Security Program Contract Classification System

(NCCS)

Internal agency concurrences will

be provided

No

Background Information

The DD Form 254, "Contract Security Classification Specification," is used to convey security requirements regarding classified information to contractors and subcontractors when access to classified information is required in support of a classified contract. This requirement is reflected in the Federal Acquisition Regulation (FAR) at section 4.403, Contracting Officer's Responsibilities, and clause 52.204-2, Security Requirements. On average, approximately 13,000 DD Form 254s are received by DSS each year from 61 agencies/ components. These forms are submitted manually, electronically and emailed as a portable document format (pdf). There is no central repository for the form and no visibility regarding the number of forms currently in use within the federal government.

The National Industrial Security Program (NISP) Contracts Classification System (NCCS) is being deployed as an Enterprise Federal information system application that supports DoD and other Federal Agencies in the NISP by facilitating the processing and distribution of contract security classification specifications (DD Form 254s) for contracts requiring access to classified information. NCCS also provides a centralized repository for the collection of classified contract security requirements and supporting data while automating the DD Form 254 processes and workflows. DSS has partnered with the Office of Defense Procurement and Acquisition Policy within the Office of the Under Secretary of Defense for Acquisition, Technology, and Logistics, to expedite the deployment of NCCS within the existing Procurement Integrated Enterprise Environment (PIEE) platform. Development started in 2014, with the initial operating capability (IOC) deployment for the core system occurred 8 June 2015 and full operating capability (FOC) occurred December 2016.
