Continuity Assessment Record and Evaluation (CARE)

CARE is an internet-based application designed, developed and implemented to automate the Continuity Assessment Record and Evaluation (CARE) patient assessment instrument to uniformly measure and compare Medicare beneficiaries' health and function status, across provider settings, over time, and to test the instrument's usefulness in a 3-year Post Acute Care-Payment Reform Demonstration (PAC-PRD) starting in 2008, with a Report to Congress in 2011.

The CARE database contains Medicare patient assessment information which details information captured about a patient during admission, discharge, or major change in status (e.g., death). The information captured and stored includes administrative information, Admission information, medical information, cognitive status information, impairments, functional status, plan of care information and discharge status.

DISPOSITION: Delete/destroy data and all related documentation 10 years after the final report to Congress is released, or when no longer needed for Agency business, whichever is longer.
