## National Park Service

## Natural Landmark System (NLS)

The NLS is a database that contains data on ecological and geological sites designated as National Natural Landmarks, or sites which have been identified as potential National Natural Landmarks. The database is a management tool used to monitor status, and conduct analyses on the sites. The data includes descriptive information about the sites such as name, location, resource types, and state of the resources, as well as administrative tracking information such as site status.

1. NLS Data Tables - data tables containing National Natural Landmark site data.

Disposition: PERMANENT

- a. Pre-1996 Data Tables: Transfer to the National Archives (NARA) when schedule is approved.
- b. Post-1996 Data Tables: Transfer updated data tables annually to NARA.
- 2. Documentation record layouts, file structures, codebooks and any other documentation that define or describe the data or the application.

Disposition: PERMANENT. Transfer with initial data tables in la. above. Transfer any changes to the documentation with subsequent transfers in lb. above.

NOTE: All transfers of electronic files to NARA will be in ASCII character set and on 9-track open reel magnetic tape or 3480 tape cartridge.
