Supervisory Control and Data Acquisition					,	
	(SCADA) Systems.					
	The Bureau of Reclamation IT System portfoli	0				
	includes fourteen SCADA systems. These					
	systems collect real time data used to operate		•			
	and maintain water storage, water conveyance	э,				
	and hydroelectric power production at facilities	3				
	in 17 western states. Real-time data is acquire	ed				
	from instrumentation, sensors, and equipment					
	control interfaces that monitor river basin					
	gauging stations, dams, canals, power plants,					
	switchyards, pumping plants, control centers,					
	and associated supporting facilities. The data					
	and information collected supports mission-					
	related program goals such as Safety of Dams	<u>, </u>				
		ο,				
}	flood control; water delivery for irrigation,					
1	municipal, and industrial use; hydropower					
	generation; and environmental mitigation

STANDARD FORM 115 (REV. 3-91)
Prescribed by NARA 36 CFR 1228

ITEM #	TITLE/DESCRIPTION	RETENTION & DISPOSITION
	INPUTS. SCADA systems receive real time data from a variety of automated instrumentation that monitors conditions ranging from milliseconds to hours. This data is captured, analyzed, and over-written as required by preset system parameters. Additional data may be manually entered by facility operators to control processes and functional outputs such as water flow, water releases, power generation, equipment operation, and in response to facility alarms.	TEMPORARY.
	a. Real-time data received from automated instrumentation	Automatically deleted when new data is collected, updated, and previous data is over written. (GRS 20, item 2b)
	b. Manual data entered by facility operator .	Delete when data has been entered into master files and verified, or when no longer required to support master file reconstruction or serve as backup, which ever is later (GRS 20, item 2b).
	c. Real-time data transmitted from other Government agency systems.	Delete when data has been entered into master files and verified, or when no longer required to support master file reconstruction or serve as backup, which ever is later. (GRS 20, 2c)
Z	MASTER FILES. SCADA systems vary in size ranging from 50,000 data points for the largest power plant to a few hundred for a water conveyance system. The real-time data provides current status or reservoirs, rivers, canals, dams, and hydropower production. This data may also be used to monitor hydrometeorological conditions, water quality, and the operating state of equipment in water and power facilities. Each SCADA system maintains its real-time data to operate its assigned facilities.	TEMPORARY. Delete when data is over written, or has become obsolete or superseded or when processed and converted to an output. Migrate current data to new software systems as necessary for continued use.
3	OUTPUTS. System outputs may consist of summarized daily, weekly, or monthly reports of operations, system analysis, or conditions including logs of alarms and events, and system logs. Outputs may include transmission of real-time data to other Government systems and agencies.	TEMPORARY. Convert to record format as defined in the Information Management Handbook. Delete when no longer needed for administrative, legal, audit, or other operational purposes. (GRS 20, item 4.)
y	SYSTEM DOCUMENTATION RELATING TO THE MASTER FILES. SCADA system documentation consists of both technical reference such as user guides, tech manuals, and system procedures, and system plans, including security, contingency, risk	TEMPORARY. Migrate to new system as necessary. Destroy or delete upon authorized deletion of the related electronic records or upon the destruction of the output of the system if the output is needed to

	management, and configuration management.	protect legal rights, whichever is later. (GRS 20, item 11a(1)).
5	BACKUPS OF FILES a. Periodic backups of key data and information are performed by each SCADA system as determined by the criticality of the data collection and use, and level of system automation.	TEMPORARY. Delete when the identical data and information have been deleted, or when replaced by a subsequent backup file. (GRS 20, item 8b.)
	b. Historic backup data required to replicate conditions existing at time of incident or event.	Delete when no longer needed for administrative, legal, audit, forensic or other operational purposes.
